HORSHAM.—The R.D.C. has arranged to erect houses at Southwater, Colgate and Crawley.

HULL.—The T.C. passed plans: T. R. Bax, 25 houses, New-street, Chanterlands-avenue, Caley, 20 houses, North-road; H. Sanderson, 19 houses, Westbourne-avenue; H. Gray, 9 houses, Marlane; W. H. Loveridge, 29 houses, Chanterlands-avenue; E. Mowforth, 10 houses, Ormonde-avenue; R. Ashton, 9 houses, Southcoates-lane; H. S. 29 houses, New-street, Marine-street; C. H. S. 10 houses, Kelvin-street; J. Emerson, 9 houses, N. road; W. H. Beal (amended), 16 houses, Godwin-avenue.

ILFRACOMBE.—Devon C.C. are to raise a loan of £9,000 for the erection of a police station.

ILKLEY.—The West Riding E.C. has received sanction from the B.E. to the acquisition of the site for proposed new girls' secondary school at Ilkley.

JARROW.—The T.C. has decided, on the recommendation of the M.H., to proceed with a scheme to convert premises at the junction of Grange-road and Wall-street into a Maternity and Child Welfare Centre.

KENDAL.—The T.C. passed plans: Reinforced concrete factory for Somervell Bros., Ltd. (architect, Messrs. Carby Hall & Sons, Leeds); 12 cottages, "Sandylands," Appleby-road, for M. C. Shaw, architect.

KINGSTON.—The E.C. has approved plans for buildings at the Grammar School.

LANGDON HILLS.—At an estimated cost of £1, the Essex E.C. recommend the purchase of a site for the new school.

LEEDS.—The Corporation has approved of ten for the erection of the proposed municipal wash-house at Stocks Hill, Holbeck, and it is intended that scheme shall be proceeded with as soon as the Council gives its final sanction to it. The scheme is estimated to cost about £18,000.

LEICESTER.—Further contracts have been entered into by the T.C. for the erection of the remainder of the 500 houses at a cost of £465 per house for a parlour type of houses, and £515 for the parlour type.

LEITCHWORTH.—The Anti-Vivisection Society, Old Bond-street, W.I., proposed to build a humane slaughter-house and abattoir on a site of about 2 acres. Plans have been before the Council, the architect being Mr. R. Stephen Ayling, Bedford House, Baker-street, W.I.

LEYTON.—The Essex C.C. recommend the purchase of £2,950 of a site for the proposed secondary school for boys.

LINCOLN.—The B.G. decided that plans and estimates be prepared for building a further vagrant ward.

LIVERPOOL.—Old Calabar Limited have in contemplation the erection of New Premises at Fazakerley, Liverpool, for which Mr. Max Clarke, F.R.I.B.A., Bedford Row, London, W.C., has been appointed Architect.

LONDON (BERMONDSEY).—The B.C. has received sanction of the M.H. for the clearance of the Salisbury street area, and for cottages to be erected on the site.

LONDON (HOLBORN).—The cost is estimated at £2,000 for the restoration of St. Sepulchre's Church spire.

THE BUILDER

JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

XXXIX.—No. 4,315

OCTOBER 16, 1925

OXFORD

THE Property and Estates Committee of the Oxford City Council are now advertising for bids for building leases on the site that is being cleared below Christ Church to the east of St. Aldate's. The question of building on this site, which no doubt will be considered by architects and others who took part in the discussion of the R.I.B.A. last year, will probably come before the City Council. The issue raised is of general interest in connection with town planning and development.

In autumn the City Council unanimously decided to draw up a town planning scheme for Oxford. This covers an area of a total approximate acreage of 19,004 acres. Oxford City Borough, the rural districts of Abingdon, Headington and Woodstock have all agreed to join in this scheme, thus ensuring uniformity in the approaches and surroundings of the city. Further, Oxford City itself has given a lead to the rest of England in obtaining the sanction of the Ministry of Health to town plan an area that is already built upon. The sanction of the Ministry will commend itself to all who realise the necessity of protecting historical buildings and colleges from possible vandalism. Already the ugliness of a building of brick, actually a warehouse, but in appearance like the front of a cinema theatre, is a disfigurement to Carfax, the picturesque centre of Oxford, where the High-street, St. Aldate's and the Corn Market meet. Such structures show the urgent need of a town-planning scheme which has, hitherto, only been carried through owing to the enthusiasm of individuals.

The scheme first deals with a number of roads and streets which are to be widened. The majority of these are to be widened to 60 ft., but the Woodstock-road, the main route from Birmingham and the North of England, will taper from 70 ft. The Botley-road, the main approach from the South of England, was widened to 60 ft. last year, but Major General Wytham Abbey, who had so much to do with the development of Johannesburg in South Africa, bought land and gave it to the City in order that this road might be widened to 60 ft. This generous gift has brought home to many people in Oxford the necessity to look to the future in view of the rapidly increasing motor traffic, not only of tourist cars, but of commercial vehicles.

Under the scheme no building, except in the case of shops and industrial buildings, is to be erected nearer to the road than 20 ft. Other building lines are prescribed. Of special interest to architects are the proposals to zone certain areas. Districts round Summertown, to the south of Wytham road, and to the south of Folly Bridge, as far as Hinksey, are to be reserved for dwelling-houses and other residential buildings, to the average number of 14 to the acre. Industries likely to injure the amenity of the areas are to be excluded.

Industrial buildings have to be built in a large area of land from North Hinksey to the west of the railway station, or to Cowley. It is of interest that one industry in this area is already so prosperous that no less than £25,000 a year is being paid in wages.

There are to be definite restrictions on the heights of buildings in Oxford. It is proposed under the scheme that no building or industrial buildings shall be erected to a height greater than 60 ft., exclusive of chimneys, towers or spires. In streets of a width less than 40 ft. no building shall be erected to a height greater than the distance from the centre of the road to the front wall of the building. There is a special area, practically the centre of the city, to which special restrictions will be applied. It has an approximate acreage of 1,212 acres. Here are only to be University special buildings, shops and

business premises. It is specifically laid down that, except in the case of public buildings, no building situated in this area shall be so erected, re-erected or altered as to occupy more than 75 per cent. of the site. No advertisements will be allowed to be displayed in such a position or manner as to injure the amenity of this area. No night signs having the appearance of moving or intermittent illumination, and no roof signs or sky signs are to be allowed. The character and height of the buildings are to be such as to preserve the existing character of the locality, and to harmonise with its existing features.

This, briefly, is the scheme. All those who appreciate good town planning will congratulate the Chairman of the Town Planning Committee and Mr. J. E. Wilkes, the City Engineer, on working out such an admirable plan, and also the Town Council upon their wisdom in passing it early in September without a division. But will they carry out in the letter the spirit of the plan? The question of St. Aldate's is becoming acute. In spite of the fact that it is the main road from Southampton, Bournemouth, and the South of England to the North of England, it was decided ten years ago only to widen it to 50 ft. This month the slum property on the west is being pulled down. In spite of the increase of motor traffic and the improvement in ideas of civic art, the Council have decided to retain the old idea of a 50 ft. road. From the business point of view it would seem to be obvious that a road widening scheme of ten years ago is likely to be inadequate for modern needs, but on this point the Town Council, influenced no doubt by a very hard working Property and Estates Committee, has decided to make no change.

Even more astonishing is the decision to allow somewhat second-rate shops to be erected in the front of St. Aldate's, and small cottage property to be built behind. There can now be seen views of Cardinal Wolsey's Hall at Christ Church that have never been visible during this generation.

There are many persons in Oxford who consider that it would be wise both economically and æsthetically to develop this site, now being cleared, very much on the same lines as Edinburgh developed Princes-street and the gardens opposite. The key of the situation appears to be Christ Church, which has power over certain land in the district,

Fortunately, during the last few days there are signs that the governing body of the college will decide to forego a possible revenue of £700 a year from shops, and convert the ground now covered with ugly stables into lawns with memorial gates opening out into St. Aldate's, and so will reveal to everyone who approaches Oxford from the south the sweep of Christ Church, Corpus, Merton, and Magdalen Tower in the distance. In such a case we hope that the disfiguring brewing house of the college, and the top story of the unsightly laboratory will also be cleared so as not to obstruct the view.

Given such a generous example, the City Council will surely reconsider their former decision. Traffic considerations demand the widening of the road to 90 ft. The cleared area of only one and a half acres on the present Ministry's standard will only give space for eighteen cottages, and these would be better placed across Folly Bridge. To allow building leases for 75 years for shops, as proposed, will condemn St. Aldate's to be a mean street until A.D. 2000. We cannot believe that the Oxford City Fathers will allow this opportunity of leaving the area now being cleared an open space for ever to be lost. Local patriotism, hard-headed business, shrewd foresight, and an appreciation of the beauty of river, meadows, and architecture demand that they should seize the chance that will be within their grasp this autumn.

NOTES.

The Preservation of Ancient Buildings of Old Buildings. THE Society for the Preservation of Ancient Buildings is fortunate in having so forcible and persistent an advocate of its claims as the Earl of Crawford. His strong appeal to a gathering entertained by the Lord Mayor of Manchester last Friday in the Town Hall can hardly fail of good results. He pointed out that in proportion to its size and importance Manchester was amongst the least fortunate cities in the country in its existing heritage of interesting old buildings and memorials of the past, and that it was therefore all the more incumbent on its citizens to treasure what of ancient value remains to them. The Society had certainly done more than its share towards securing the preservation of Platt Hall and Bramhall Hall, the safety of which he hoped was now assured. As a welcome evidence of revolution in public sentiment, he instanced the case of Norwich, which had a committee established to consider the plans of all old buildings in the borough in connection with any proposed changes, to consider the proposed erection of new buildings adjacent to old which might destroy their charm, and to protect natural beauty spots.

WE note that notwithstanding the laxity with **Loss of Old Cottages.** which building regulations are regarded by many authorities, owing to the supreme import-

ance of providing more cottage homes, there are still signs of needless condemnation of many decent old cottages which are sometimes better from a sanitary point of view than those which have been condemned. We fear that many nice old thatched cottages are condemned when a comparatively trifling outlay would render them entirely satisfactory for a long time to come.

WHEN one thinks of the **Cathedral injury to our cathedrals Memorials.** resulting from unsuitable memorials through the last half century, we are inclined to agree with the correspondent in a contemporary who would forbid any more monuments except for the commemoration of some event of individual or national importance. Yet this does not altogether meet the need, and we can think of the most unsuitable military memorial which blocks up the west wall in Rochester Cathedral, to take one instance out of many. It would not be easy to agree as to what is of national importance, contemporary values not being always confirmed by posterity. The Prime Minister of but a short period ago may not be even a memory a hundred years hence. As the writer tells us, "Probably in 30 years hence people will be more concerned with the qualities of the memorial than with those of the man." This statement is of much application to the present time, when in the majority of cases there is not even a mention of the artist at all, the function and its little prerogatives absorbing all the interest.

If the artistry of the memorial were regarded there would be fewer of and they would be better done. Is not even some relationship apparent between the virtue of the memorial and the spirit that promotes it? Really, however, only come by the advancement of public taste, and not sure that the formation of committees to guide it can help much, though it is a sign of the disease.

WE have in recent **Committees of Public Taste.** seen the growth of committees of public taste, and reference to advisory being directed to secure that unsuitable memorials and other additions shall be subject to the same criticism may easily be carried through. With respect, however, to manifestly intentions the desire for such action is usually one difficult to attain. An architect is called in to effect additions or alterations in a building; the plans made for his clients are based on—in the case of churches—to the Diocesan Committees to advise. In recent instances we do not think assistance has been at all helpful. One can imagine a responsible architect feeling an objection to this interference between him and his client. Or take, for example, within our knowledge, of the case for a stained-glass window of a known artist. The advice tendered is much more directed to establishing ideas which our better intelligence in these matters is superseding. As being a vulgar and conventional use and there is not much to choose, and we are in danger of oscillating between the two. Between the rather orthodox persuasions of advisory committees and the ordinary persons we may regard as the clients, the difference often does not seem much difference. We are not so ready to decry ordinary intelligence as to believe that it is a better for the community to be spoiled by committees of taste, and in this I think many artists will agree.

Architect and Builder.

WE are informed that the purchase plans for the park of Gunnersbury Park have now passed, after months of negotiation. The park is 200 acres in extent, and under the present scheme it is intended to set apart 130 acres for building purposes. The Ministry, we are told, have placed no restriction on the type of building to be erected on any particular portion of the park coming in the building scheme, "purchasers are at liberty to use the land in any way they wish." It is to this sentence that we desire to call attention. It is not proper to regard much of the present building of domestic houses in the Ealing district as less than deplorable, though an exception may be seen here and there, especially where an architect has directed the building, and our object here is to appeal to builders to regard the importance

"The Spinners": Figure over the entrance of Vigo House, Regent-street.
MR. W. REID DICK, A.R.A., Sculptor.

ma, Whitwell Church, Isle of Wight. By Miss Dowson. the Church Congress Exhibition, Eastbourne. See p. 555).

the aid of good architects, lest beautiful spot should suffer the disadvantage arising from some of the local proceeding. We appeal first to the public spirit, but also to the advantage that lies in a more traditional type of building.

THOSE who have passed down the newly widened Berkeley-street lately may well feel that a pleasant new fare has been provided for whilst the extremely plain type building which is being erected the north end seems to echo the low estate of the street. The treatment of "Devonshire House" strong contrast to the reticence neighbours.

THERE is a good deal to be said in support of the proposals. test for putting a definite restriction on memorials in medials so that only those who large claim on the remembrance of al public should be so honoured.

If the erection of memorials in our churches were so arranged as to form part of a comprehensive scheme of decoration or constructive adornment, such as arcades or new windows, there might be some reason for including gifts which memorialised people of lesser fame, but the multiplication of isolated panels is a real deterioration of interiors

THE building developments **Carshalton.** in recent years in suburban areas, while it has been of a remarkable character judged by its extent, has unfortunately generally lacked forethought and judgment, with results which are well known, the natural and historical interest of the district frequently being ruthlessly sacrificed through ignorance and indifference. Where, on the other hand, those responsible for the well-being of a growing area are conscious of the value to the community of the careful preservation of its natural and historical possessions, we find the growth of a civic spirit which is doing much to educate the general community against this indifference and neglect. A village which is growing with some rapidity but which, thanks to the wisdom and forethought of the Urban District Council and others, neglects no opportunity of preserving the picturesque charm of the neighbourhood, while not forgetting the growing needs of the community, is Carshalton. The Council at the close of 1924, having in

National Federation of Building Trade Employers. ONE of the most interesting appointments in the building industry of recent years is that of Sir J. Walker Smith to be managing director of the National Federation of Building Trade Employers. Sir Walker Smith's resignation from the position of Director of Housing at the Ministry of Health took effect on September 30. He will bring to the Federation a well-trained administrative brain, for he has had wide experience as City Engineer at Edinburgh with the Scottish Board of Health, and since 1919 at Whitehall, where he has served on all the most important committees connected with building.

Afforestation. WE are glad to note that Lord Ullswater, presiding at the annual dinner of the English Arboricultural Society recently, had something to say not only on the duty of the State and the large Corporations to carry out schemes of afforestation, but to restrain the depredations of timber speculators who purchase estates, denude them of all marketable timber, and then sell the devastated and ruined areas for what they will bring. Many fine estates, we know, have been ruined in this way, and while the State and municipal bodies are being urged to carry out works of arboriculture, something should be done to prevent such reckless destruction.

GENERAL NEWS

Professional Announcements.

Mr. William Harvey's postal address is "Dallinga," Lower-road, Great Bookham, Leatherhead, Surrey, instead of Fetcham as formerly.

Messrs. Bethell, Swannell & Durnford, architects and surveyors, have removed to Adam House, 16A, John-street, Adelphi, W.C.2.

Waterloo Bridge.

At Tuesday's meeting of the L.C.C. it was announced that Sir Edwin Lutyens had been asked to prepare a design showing how a width between the existing parapets of the bridge sufficient for four lines of vehicular traffic could best be obtained, provision being made elsewhere by corbelling out part of the footways (or otherwise) for foot passengers; and to report on the artistic effect of any such alteration. The report is now under consideration by the Improvements Sub-Committee.

Several American institutes and societies have written to the London County Council protesting against the demolition of Waterloo Bridge.

Harrington House.

Harrington House, Craig's-court, is now on the market; it is the last of the Early Georgian town mansions with gardens to the river that once stretched from Whitehall Palace to the Temple.

Bristol's Town-Planning Scheme.]

Mr. E. W. Savory recently gave an address to members of the Bristol Civic League on "Town Planning and the Proposed Scheme for Bristol." After giving an outline of the Town-Planning Acts, Mr. Savory said the preparation of a town-planning scheme did not imply an intention to cover the whole of the land in question with buildings, or to make an elaborate housing scheme; nor did it necessarily involve the local authority in immediate expenditure on works of any kind. Its object was to provide that development, if and when it took place, should be in accordance with a plan which had been prepared in the interests of the community as a whole, industrial and commercial as well as residential. The plan should fix in broad outline the areas to be used for industry, business, and residence, the principal roads and open spaces, the number of buildings to the acre, and similar matters. The object aimed at could only be achieved if the plan adopted met with general support from all classes, and it was therefore important that local authorities should consult from the outset every interest affected.

Lancashire Road Scheme.

Liverpool City Council have approved of the scheme to construct a new £2,750,000 motor road, 26 miles long, between Liverpool and East Lancashire and to contribute a sum not exceeding £362,000 towards the cost.

Leeds University: An Appeal.

The University of Leeds is appealing for funds for the purposes of structural expansion and increased equipment. Contributions may be forwarded addressed to the Hon. Rupert Beckett, Treasurer of the University of Leeds.

Obituary.

The death has occurred at his residence, "Coomroye," Topsham-road, Exeter, of Mr. James Jerman, F.R.I.B.A., aged seventy-seven, one of Exeter's best-known architects. For nearly half-a-century Mr. Jerman played a prominent part in the public affairs of Exeter. He was architect to the Exeter School Board, later acting in a consultative capacity to the Exeter Education Committee. Exeter School, Maynard's School, and the Modern School for Girls, Pennsylvania-road, were other examples of his work. He was also the architect for the extension of St. Luke's Diocesan Training College for Teachers, and for the extension of the College Chapel, and was a prominent member of the Devon and Exeter Architectural Society.

Mr. Charles Web Gilbert, the sculptor, has died in Melbourne at the age of fifty-six. Mr. Gilbert exhibited at the Royal Academy, at

Liverpool, and many other galleries in Europe and Australia. A lieutenant in the Australian Imperial Forces, he was commissioned by the Commonwealth Government to execute models of battlefields fought over by the Australian troops. He also executed the Australian War Memorial at Mont St. Quentin, a replica of which is to go to the Australian War Museum.

MEETINGS

FRIDAY, October 16.

Glasgow Architectural Craftsmen's Society.—Professor C. Gourlay on "Roman Architecture." At the Royal Technical College, 7.45 p.m.

FRIDAY AND SATURDAY, October 16 and 17.

National Federation of House Builders.—Half-yearly Meeting at Blackpool.

WEDNESDAY, October 21.

COMPETITION NEWS

Art Gallery and Museum, Birkenhead

Birkenhead County Borough Council competitive designs for a new Art Gallery and Museum to be erected within this town. Competitors must have been resident in the town for at least twenty miles of Birkenhead during the whole period up to January 1, 1923. Three premiums offered, namely, £250, £175, and £125. Robert Lorimer, A.R.A., R.S.A., F.R.I.B.A., the assessor. Conditions of competition to be obtained on application, with a copy of the site plan, plan of the subsoil, &c., of the site, and photographs of the site, and a plan of the site can be obtained on application, with a deposit of two guineas, to the Curator, Central Library, Birkenhead, to whom designs should be sent by January 30, 1926.

Reconstruction of the Mosque of Cairo.

Members of the Royal Institute of Architects considering taking part in this competition should strongly recommended to consult the Secretary, R.I.B.A., before deciding to compete.

Manchester Town Hall.

The Town Hall Extension Special Committee has recommended that the sum of £250,000 included in next year's estimates to be paid by the Council, as premiums, assessor's fees, &c., and expenses in connection with the proposed competition for designs for the Town Hall extension.

Competitions Open.

Particulars published in "Builder."	
Newcastle Fire and Police Station. Premiums: £500, £300, £100. Mr. P. S. Worthington, F.R.I.B.A., Assessor.	June 12 ..
Town Hall, &c., Pretoria. Open to architects residing in South Africa or Registered under Architects' Act, of 1909, Transvaal. Assessor to be appointed by R.I.B.A. Premiums: £250, £150, £100.	— ..
Argentine Institute. Premiums 10,000, 6,000, 4,000, 3,000, 2,000 gold pesos. Apply particulars, 35, Old Queen-street, S.W.1 ..	April 24 ..
New Buildings for Liverpool College, Mossley Hill. Sir Giles Gilbert Scott, R.A., Assessor. Premiums: £500, £300 and £200. Apply to J. H. Lintern, Secretary, Liverpool College, Sefton Park-road, Liverpool ..	Aug 7 ..
Australian War Memorial, Canberra. Open to architects of Australian birth. Apply High Commissioner, Australia House, Strand, London	Aug. 14 ..
Plan for construction of Conference Hall, for League of Nations, Geneva. International Competition, Sir John Burnet being British representative on Jury of Assessors. 100,000 Swiss francs to be divided among architects submitting best plans. Programmes will be deposited in due course with R.I.B.A., 9, Conduit-street, where intending competitors should apply. Single copies from Secretary-General, League of Nations, Geneva, on payment of 20 Swiss francs.	Jan. 2 ..
Labour-saving House, Moor Park Estate, to be built at a cost not exceeding £1,500 (including builder's profit and cost of making up garden and fencing, but excluding cost of site). Designs invited from builders, but if architects are employed builders will be responsible for their fees. Premiums: £100, £50, £25. Apply Moor Park, Ltd., Moor Park, Herts.	Oct. 2 ..
* Technical School to be erected at Cookstown, Co. Tyrone, for Technical Instruction Committee. Apply Mr. R. C. Burke, Technical School, Cookstown.	Oct. 2 ..
* Portstewart Golf Club.	— ..

* Competitions when "warned" or vetoed by the Council are starred.

Design for "A Monument and Lighthouse at the Mersey Bar." (Fifth-year work, six-hour sketch.)

By MR. T. T. WILLS (Liverpool University School of Architecture).

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Another Manchester Corporation Competition.

SIR,—The Manchester Art Gallery Competition is to be shortly followed by another Corporation competition. The former contained two conditions originally suggested in *The Builder*, which should be repeated in the coming competition: (1) "The successful competitor will be required to provide a perspective to fully illustrate his building" (that saves competitors a great deal of work); (2) "plans to be 16 ft. to the inch" (the scale of elevations must, of course, be left to the assessors—it would save great labour if they were also 16 ft. to the inch).

The Art Gallery Competition contained the condition: "A design shall be excluded from the competition if any of the conditions are disregarded." Should this condition be repeated in the coming Manchester competition, the City Council, the Art Gallery Committee, and the Town Clerk will be placed in an extremely awkward position.

As all readers of *The Builder* know, a coach and four was driven through the Art Gallery Competition conditions; they were successfully ignored on most vital points, and all competitors who strictly complied with the conditions had their work wasted. The City Council has established a most objectionable precedent. Clearly they must insist on their precedent being followed in all coming Manchester Corporation competitions. The Town Clerk, the legal adviser of the City Council, has not protested against this condition being flouted. He cannot advise the Art Gallery Committee one way and the Libraries Committee directly the opposite way.

The Art Gallery Committee will also insist that their reading of the condition (that it may be successfully ignored), must be upheld; otherwise their award would be vitiated and illegal. The Libraries Committee are now engaged in preparing minute instructions and conditions as to their requirements for what is to be the most up-to-date library in the country; they will naturally desire to insist on their requirements being complied with. They will, therefore, place themselves in direct opposition to the City Council, the Art Gallery Committee, and the Town Clerk; all these three will assert that they have established the precedent that the most precise conditions do not hold good in Manchester.

The City Council must necessarily support the Art Gallery Committee. The Libraries Committee should have to give way, but will they? The Art Gallery Committee cannot take legal proceedings in defence of their competition award as their competition expenditure is limited to £2,500, every penny of which has been either spent or ear-marked for specific purposes. Neither the City Council nor the auditors would allow that amount to be exceeded.

Should the Libraries Committee succeed in inducing the City Council to throw the Art Gallery Committee and their reading of the vital condition overboard, the recent competition result would have to be reconsidered. As the condition cannot be read two ways, it must hold good for both committees, or it may be ignored in both cases. The Town Clerk will have to advise what the words mean; one of the two committees will have to give way.

Manchester.

T. SINGTON.

A Trade Training Experiment.

SIR,—I was interested to read the note headed "A Trade Training Experiment" which appeared in your issue of October 2. The substance of this experiment appears to be exactly parallel to the present syllabus of the Junior Building School at the Northern Polytechnic. The boys who attend this school

and enter at the age of 13, spend the workshop period in each term of their first year in a different shop, and thus have knowledge of three trades, e.g., plumbing, bricklaying, carpentry and joinery, and at the beginning of their second year choose one trade which they follow for the rest of their course. In addition to this work they receive training in theoretical subjects connected with building, as it is found that a large proportion of these boys achieve responsible positions at an early age. Incidentally it is felt that the system in itself is largely responsible for the rapid progress which many of them make.

T. P. BENNETT.

Northern Polytechnic.

Rough-casting Somerset Church Towers.

SIR,—Many of your readers will know that we have some of the noblest church towers in Europe in the county of Somerset. During a recent sketching trip through the Cheddar valley my attention was drawn to a tower that had recently been rough-casted. The church is chiefly famous for its Saxon font, and a modern classical north aisle stuck on to the fourteenth-century nave. I think this is about the limit, especially as there are no fewer than three church towers in this valley that have been properly pointed with cement.

EDWARD VALE.

Weston-super-Mare.

Tendering.

SIR,—Having recently tendered for quite a number of contracts for various councils, I have been surprised that they have not even deigned to notify me that I was unsuccessful.

This in itself is discourteous, but I think has a genuine grievance when going to trouble and expense of tendering for public works if one is not informed of the names of successful competitors.

A great factor in the reducing of house costs is the competition amongst small builders and it would be as well if the Ministry of Housing were to compel Councils calling for tenders to undertake to publish full particulars of successful tender.

Quite recently I spoke to a builder who knew had tendered for some houses for which I also had submitted a tender, and his opinion like mine, was that in this particular house tender there had been some very mysterious work at the Council meeting, and neither of us has been able to glean the slightest information as to the cost of the successful tender. Both of us are equally confident that the one who secured the tender were unable with the immense overhead charges to do the work at a lower figure than we, if they execute the work as specified.

"BUILDER"

Architects' Indemnity Insurance.

Owing to the increasing growth of the "Architects' Indemnity Policy" insurance, a company, under the title of Architects' and Professional Indemnity Agencies, Ltd., has formed to act as agents for this insurance. The new company will furnish preliminary legal advice in cases of difficulty where a claim is likely to arise (the policy itself covers legal charges in respect of all claims actually formulated), and will be prepared to act for architects on general questions relating to insurance.

Designed by Mr. EDWARD SPENCER: Executed by the Artificers' Guild

THE PRESERVATION OF ST. PAUL'S CATHEDRAL AND OTHER BUILDINGS

Sir,—In a review of my book, "The Preservation of St. Paul's Cathedral and Other Famous Buildings," which appeared in *The Builder*, September 25, Mr. W. A. Forsyth, R.I.B.A., objects to the use of reinforcement repair work and, in illustration of his point of view, suggests that "Westminster Hall could have been repaired in oak, and whereas much original work might be lost, the design and the wonderful conception of carpentry would have been retained. Much of the latter has been displaced to accommodate heavy and costly steel reinforcement, the stability of which is uncertain owing to its accessibility for painting and for other protective measures." Having worked and died in Westminster Hall during a great part of the progress of the recent admirable repairs devised and executed by H.M. Office of Works, I find myself unable to agree both with Mr. Forsyth's statement and with his suggestion. Westminster Hall roof was in too serious a state of decay to have been repaired in oak alone, and an attempt to repair by splicing would have meant the use of vast quantities of metal in bolts and fishplates and at a mechanical disadvantage. Repair of this sort would have overweighted and disarranged the old roof.

Mr. Forsyth is prepared for the fact that much original work might be lost, and perhaps he means that he would favour a better reconstruction of the roof, for that is at least repair in oak would imply if fishplates were to be avoided. His desire is that "both the design and the wonderful conception in carpentry" should be retained. Can it be said that H.M. Office of Works has failed to retain that, is possible, since the actual original timber, with all their genuine mouldings and carvings, have been held in position without any obvious or apparent intrusion of new work? The protest against the destruction of old buildings in the interest of so-called restoration and to show that an alternative and far better method of repair might be put into practice were my objects in writing my book; Mr. Forsyth clings to the old and discredited way of "restoration" that deprived the world of so much original ancient art during the Victorian period.

By repudiating the use of reinforcement and the opportunity it affords of retaining the valuable ancient work by inconspicuous means, Mr. Forsyth ranges himself with those who would "pull down old to build up new" and "let it be restoration." An attempt to rebuild Westminster Hall roof in a manner to retain the design and the wonderful conception in carpentry must presuppose exact knowledge of both of these things, and this knowledge is lacking. My own researches into the life of the design of the roof and the intention of its creators have produced results which have appealed to friendly critics as interesting and suggestive, but these results are still only matters of conjecture, and, as such, flatly contradict the conjectures of former writers. The reconstruction of the roof that might be attempted in order to recapture "the wonderful conception in carpentry" would have been made in accordance with some person's ideas on the subject, and priceless original work would be destroyed in order to exploit it. Surely it is far better that the original design should be retained at Westminster and an interpretation of the wonderful conception in carpentry should be exhibited as a possible model of loose blocks of oak at the Victoria Museum at South Kensington. If my book does no good, it at least does no harm. No ancient work has been destroyed to make room for it. The late Lord Grimston's well-intentioned and altogether successful restoration of St. Alban's Abbey to its original design has proved for all time the error of sacrificing "much original work"

in the hope of recapturing "a wonderful conception."

In objecting that H.M. Office of Works reinforces "whole structures as well as portions only," Mr. Forsyth implies that partial and fragmentary reinforcement would be less objectionable to him than a properly thought-out and consistently applied scheme, and it should be pointed out that for reinforcement to be efficient in connecting masses of old masonry and restraining their dangerous tendencies to overturn in opposite directions, it must be continuous from bearing to bearing and from a sufficient anchor-hold in one mass to another sufficient anchor-hold in the other. From the earliest times reinforcement has been used in repair work, but it has too often been of a fragmentary description, and I do not, as Mr. Forsyth seems to think, claim that the "application" of reinforcement is itself "scientific." The science of conservation covers the diagnosis of causes of decay in the ancient building and the discovery of appropriate means of restraining their action. The design and calculation in detail of these measures and their "application" are but parts, though important parts, of the conservator's profession.

Mr. Forsyth is much exercised as to the prospect of decay by rusting in the reinforcing members, and asserts that I have "slurred over" this important matter. He quotes, however, two of my recommendations to the effect that "reinforcement should be kept out of contact with the air," and that when this is impracticable that it should be in "non-corrosive metal"; so that it is rather difficult to see in what the alleged slurring over consists. As a matter of fact, the protection of reinforcement is referred to again and again in my book. But the endurance of adequately protected reinforcement has been demonstrated beyond a doubt, not only by recent tests, but by the continued stability of old buildings in which it forms an essential part of the structure. Byzantine and Saracenic works often depend upon bow strings of tensile reinforcement, in wood, iron, or bronze, across the spans of their arches, and would have fallen long ago but for these tension members. Aisle vaults with exposed tie-bars at Westminster Abbey and Canterbury Cathedral are instanced in my book in illustration of the nature of arch pressures and their results. Exposed tie-bars are, however, to be avoided in repair work wherever possible.

Not only does Mr. Forsyth fear that rusting will take place in reinforcement buried in concrete beams even when it is further protected by a covering of solid masonry, but he inquires "to what extent will an ancient building like St. Paul's, or a ruin like Tintern Abbey, be wrecked, first in locating and then in approaching and removing the buried ferro-concrete reinforcement?" But why should anyone bother to approach and remove buried ferro-concrete that is also difficult to locate? If it has failed, as Mr. Forsyth imagines, its presence will be revealed to any competent surveyor investigating the symptoms of that failure; and if it has not failed, no competent surveyor will need to locate or in any way tamper with it.

Referring to old iron "reinforcement" at St. Paul's Cathedral, he remarks: "It should be remembered in this connection that the Surveyor to the Fabric has for years been engaged in removing rusted wrought-iron and repairing the damage thus caused to masonry." By all means let it be remembered, but it is also proper to remember that these bars and cramps have been removed from exposed positions where rust was inevitable, and that for such positions I have advised the use of non-corrosive metal if tensile reinforcement is absolutely necessary. Many of these objectionable iron bars at St. Paul's have been inserted

carelessly in repairs to the structure and are examples of the reckless misuse of material. Of Wren's own successful use of reinforcement in the "great chain" of the dome, Mr. Forsyth says nothing. No one has "wrecked" the building in "locating" or "removing" this important part of the structure, which has functioned adequately during more than two hundred years.

Repair by means of reinforcement is not the untried affair, "untested by time," that Mr. Forsyth professes to think it. Mediæval buildings bowing out in response to the pressures of their arches and vaulting have been satisfactorily stitched together even in the pre-Renaissance period, and in the Near East buildings exist where damage occasioned by earthquake has been restrained by similar means.

It is not always safest, as Mr. Forsyth suggests, "to repair old buildings as far as possible with the same materials of which they are built." The result of applying such a theory at Westminster Hall has been briefly outlined above. Experience shows that it means in practice the disfigurement of the monument to which it is applied. Either the building is pulled down and rebuilt, or its design is obscured and disguised with additional works, piers, buttresses, patches, and the blockings up of openings that ruin the appearance of the work. Anticipating some such criticism, I included in my book an imaginary account of the works that would have to be executed at St. Paul's if the conservator were to limit himself to the use of lime-built masonry alone. "Limitation to the use of lime mortar would mean erecting new additions of stonework about Wren's piers, and the insertion of pressure arches across the building under the great arches to restrain their inward bend. It would also mean blocking up the adjoining spans of the aisle arcades to improve the buttress action of the building in upholding the main piers against the thrusts of the arches and pendentives." It need hardly be said that repairs of this nature would be highly objectionable in that they would intrude upon and disfigure the proportions of Wren's work and altogether spoil his design, quite apart from their practical advantages or disadvantages as engineering works.

In criticising my proposals for a possible comprehensive scheme of repair at St. Paul's Cathedral, Mr. Forsyth makes no mention of the most vital of all—the suggestion that the eight principal piers should be re-cored in a similar manner to those of Jedburgh Abbey. Instead of crediting me with the suggestion he advances a similar proposition as if it were his own contribution to the subject. "Nothing" (he says) "but a replacement of the weak core by a reliable substitute will suffice, and it must be done before any fantastic remedy in reinforcement is considered." Now, it is one thing to theorise that what was done at Jedburgh may be done again, and quite another thing to apply similar methods to a far larger, more complex, and more heavily loaded structure like St. Paul's. The works at Jedburgh demanded extraordinary vigilance and precaution even after an excellent system of centering and shoring had been constructed. At St. Paul's still greater difficulties have to be overcome both in the re-coring operations and in the preliminary shoring and needling. The scheme of reinforcement that Mr. Forsyth characterises as fantastic I have deliberately put forward as one way of contributing to the efficacy of the temporary centres and shoring during the progress of the re-coring work. To criticise it apart from the proposed re-coring is both unfair and absurd, for the connection between my reinforcement scheme and the re-coring is set forth quite clearly on page 68 of my book. My suggested reinforcement is also designed to restrain outward movements occasioned by the pressures of the terribly overloaded main arches and pendentives, but this primary source of danger is ignored alike by Mr. Forsyth and the St. Paul's Commission.

WILLIAM HARVEY.

THE CHURCH CONGRESS, EASTBOURNE

THE EXHIBITION AND LOAN COLLECTION.

FOR the first time in its history Eastbourne has been chosen for the Church Congress, held during the last week. Twice before has it met in the Diocese—both times at Brighton—the first as far back as 1874 and the last in 1901. The Pavilion at Devonshire Park was secured for the purposes of the exhibition, and it was in close proximity to the Congress Meeting Hall.

Eastbourne is a comparatively modern town. Less than one hundred years ago the old Parish Church of St. Mary sufficed for the whole of the parish. Since then all the many existing churches had been erected, and amongst them may be mentioned St. Saviour's, by George E. Street, R.A., erected in 1866, and the recent ones of St. Michael's and All Angels', and St. George's, both of rather recent date, by G. C. S. Streatfield. These and other very fine modern churches were very much used and appreciated during the meeting of the Congress.

An exceedingly attractive feature of the Exhibition has always been the fine Loan Collection, generally drawn largely from the Diocese in which the Congress is held. This year there is no exception to the rule. It has been brought together by the well-known Sussex antiquary, the Rev. A. A. Evans, of East Dean, Eastbourne, and he is to be heartily congratulated upon the result of his endeavour. In a way it has been rather strictly limited to the county of Sussex, and this is well. It is much easier to judge of the craftsmanship of a district by seeing the local types gathered together and being able to compare them than "running afiel" for "alien" varieties. It should be a display of local treasures, and outside work should be avoided. From this point of view this Loan Exhibition illustrating Sussex craftsmanship is a great success, and the delightful collection of chalices and other rare pieces of church plate, as well as early illuminated manuscripts and rare printed books, fine pewter plate, needlework (much very early), fine ivories, enamels, oak carvings, as well as very beautiful Nottingham alabaster panels, all help to form a very complete treasure of splendid things. One special collection of monumental brass rubbings, loaned by Mr. H. E. Firth Franks of Rye, all excellently "done" and well mounted on linen, form an effective decoration for the walls.

Among some of the most interesting objects loaned are many mediæval panels belonging to the Nottingham group of alabaster workers, a craft which reached great popularity in England during the fifteenth century. Much alabaster work on the Continent was also executed by these

English carvers and new examples are very often being discovered and recorded. The material used by these Nottingham workers came from the Chellaston quarries in Derbyshire. Although the output must have been very great indeed, yet, if they are examined very carefully, each seems to possess a very individual beauty, and the colourings generally are splendid.

The panel of "The Betrayal" is a particularly fine one. The whole group was loaned by Dr. Philip Nelson, of Liverpool. A study of the very fine collections now at the Victoria and Albert and the British Museums will easily illustrate to what a very wonderful level this rather late English Gothic craftsmanship reaches, both in regard to design and execution as well as colouring.

Generally, there are a great number of rare and early objects shown, of all types and workmanship, which are more or less accidentally brought into the district—many of them are often of foreign origin—and on the whole the gathering and displaying of such treasures is to be defended. Very many beautiful things would hardly ever be seen, did not these exhibitions take place, and records of them might never be made. Perhaps at Eastbourne this year there are fewer than at Oxford last year; but that is natural, the two centres are so very different.

One of the best things in the whole exhibition is the small ivory panel—one of a pair, a diptych, found in the ruins of Hastings Castle. The subject is "The Crowning of the Virgin," and is of the finest French craftsmanship, *circa* 1300. It belongs to the Sussex Archaeological Society, Lewes. Other early ivory carvings by French, Italian and Spanish craftsmen are also exhibited, but there is no English ivory work loaned.

The enamels are few, and here, again, all are French. One particularly beautiful bronze panel—perhaps a book cover—evidently of Limoges work of the early thirteenth century, is exhibited. It was found in Rottingdean Parish Churchyard about 1770; unfortunately the whole of the enamelling has been lost. It also is lent by the Sussex Archaeological Society. The two splendid seals shown by the Corporation of Pevensey are stated to be the oldest of any of the Cinque Ports. Their general design, with the centre well filled with high relief models of early ships, is very ample and generous—even quite noble as compared to many such seals of the later periods of craftsmanship. There are two magnificent cases of English Church plate, chiefly of fine chalices, drawn from all over the county of Sussex, and some are gathered even so far away as Wales and its borders as well as Devon and Cornwall. The earliest example shown is a chalice and paten of a class known as a "Mortuary Chalice and Paten." It was found at the restoration of East Dean Church, Eastbourne, about 1885, buried with the priest in the chancel. It is of pewter and dates from the thirteenth century. It is extremely simple in form, with a wide and low bowl.

No other mediæval ones are loaned at all; at Oxford last year there were several. It is remarkable how thoroughly these beautiful examples of our Gothic art must have been destroyed throughout the county, but there are shown some extremely interesting Elizabethan ones; quite a distinct type. They are supposed to have been made at Chichester or Arundel by a local silversmith, and it seems quite possible. Their design is rather unusual. The bowl is "funnel" shaped—not unlike a type of late wine glass—the stem is straight, with an enriched band midway and with a slightly domed foot. Those loaned from the churches of Itchenor, Chichester and Selsey are very similar. The date is about 1568. The height is about 7 in. There is shown a very charming one belonging to the church at Lynchemere, Haslemere. It is evidently by the same craftsman and is only 4½ in. high. It has a simple tapering stem, a slightly domed foot, quite plain, and the bowl is enriched with a band of interlaced engraving in the panels of which is inscribed in rude lettering, "For them of

Lensmere Parise." Both the Itchenor and Selsey chalices have very richly decorated

Others very different in design and execution to the above are those loaned by the church of Bethos-y-Crwyn, Clun, Salop, and Wrexham, Wrexham. The former is an extremely beautiful decorated cup of the date 1662. A design in high repoussé is worked in the divisions of the bowl and repeated, inverted, the flowery stem on the spreading foot is a delightful piece of work. The hall is of London. Its height is 5½ in.

The second one comes from Dorset; apparently it is not a local type. The bowl is straight-sided and tapers. The stem tapers from base right to the bowl. Its date is *circa* 1600. The design on both bowl and stem is similar. It is based on the daisy, and part has two tiers of petals—plain and gilded, counter changed. It is a very interesting and unique example, perhaps intended originally as an ordinary drinking cup. All the others are of very exceptional shape. Besides these there are shown a number of Elizabethan chalices of the more ordinary form, some of which are very beautiful and a few unusually plain and dainty, both in shape and moulding as well as in decoration. The one from the church of East Hoathly, having the hall-mark for the year 1567, is one of the finest of this type.

Others are from Sackville College, Grinstead (dated 1560), and Ogwell Church, Newton Abbot, Devon (dated 1576). The wonderful alms dish, also from this church, apparently has only recently been recognised as a very remarkable and rare example of English silversmith's work. It has no mark, and it is not quite easy to tell its date, but it is certainly to be either late sixteenth or early seventeenth century. It is to be hoped it will be loaned for a time to the Victoria and Albert Museum, where it could be studied and compared with the similar pieces of work in this important collection.

Two particularly beautiful chalices of a different type are loaned by the church of Penhurst (dated 1610). The other is from Waldron Church, and is dated 1638. They have very slender baluster stems and illustrate a rare and unusual form.

Another chalice unlike any of the others exhibited is by the Dean of Battle. It is described as a "Silver Communion Cup, high; diameter of bowl, 4½ in.; and of foot, 4½ in." The bowl is straight-sided and slightly spreading at the lip. The stem is equally divided by a knob. ⅝ in. in width. Its date is 1552. This is a strange cup, and is much like the shape of the large ones used in our churches of the eighteenth century. There are very many more very beautiful things shown that could be described, but the above will give some little idea of the very many treasures brought together.

In the Loan Collection are exhibited several examples of modern craftsmanship. Many of them are unworthy of being shown with the very fine and choice English silver work of the sixteenth and seventeenth centuries, and a very great pity more discretion is not shown when such exhibits are offered. They should be at once rejected.

In the case containing the pair of silver-gilt maces belonging to the Corporation of Rye, dated 1767-8, and the splendid maces of a century earlier, owned by the Corporation, is a very fine modern one loaned by the Provost and Churchwardens of St. Andrew's Cathedral, Aberdeen. This interesting mace has a fine staff of mahogany, tapering and twisted, giving a splendid grip. It is in lantern form, having six columns surmounted with a jewelled canopy, crowning which is a silver figure of St. Andrew bearing his Cross.

In the front niche between the columns is a silver figure of Christ as the Good Shepherd, and the niche directly behind it has the figure of "The Life," very beautifully modelled and chased. The whole is richly jewelled, with amethysts, pearls and diamonds being discreetly used and very well set. The mace was designed by Mr. E.

Alabaster Panel: "Christ before Pilate," Nottingham. Fifteenth Century.

Silver Altar Cross.

and made by MR OMAR RAMSDEN,
the High Altar of Rochester Cathedral.

, and the work executed by the Arti-
ficers' Guild. If modern work is loaned at all
it should be equal to work of this very high
class.

A group of two-handled vessels, usually
"porringers," are shown. These, it is
said, were originally intended for "home"
use, and eventually were dedicated to the use
of the church. They are from the churches at
Bishop's Cleeve, Steyning, St. Nicholas,
and Friar's Gate, Chichester, now
in the Museum. The later one is dated 1703—late
18th century.

A remarkable maple wood chalice has been
made by T. Sutton, Esq., of Eastbourne; it
is finely turned on a well-designed baluster
4 feet high. It is engraved with the figures
of a lion and unicorn, an ostrich with a horse-
man's beak, and a hart with collar and
running around the body of the cup
around the foot and underneath, are
engraved lines, signed "Richard Allin
xxii of October, 1610." It would be
interesting to know to what church this

An ordinary section of the General Exhibi-
tion, the outstanding displays are by two
young metal workers. Stained glass, metal
needlework, woodwork are all shown, as
some monumental work, but hardly any
is for notice. It is unfortunate that
displays of uninteresting work should take
up so much space after year with very little effort to
improve them.

There are few figures shown for our churches
at all worthy of a place in them. The statue of
"Our Lady of Whitwell," Whitwell Church,
Isle of Wight, is delightfully treated from the
design point of view, as well as highly coloured
and gilded—as such figures should be. It
was placed in the church soon after the war
in memory of a fallen soldier. It is 4.6½ in.
high, and the enlarged plate showing the
Heads illustrates well the delightful design
and modelling of the artist. No doubt the
colour greatly enhances even this. The smaller
figure was made for a niche over the porch of
a church in Kent. It is now placed in the
church at Hartfield, Sussex, and a replica is at
the convent at Emsworth. Both are by Miss
Dowson, of Hartfield, and well illustrate figures
modelled and coloured in a way often lacking
in many.

The high level always maintained by Mr.
Edward Spencer and the craftsmen of the
Artificers' Guild is always a pleasure to draw
attention to. The influence of their work must
be very great. Already a description has been
given of the mace for St. Andrew's Cathedral,
Aberdeen. Two other very interesting maces
of recent date should be noted. They are for
the Cathedral at Liverpool, and are fine
examples of their kind. Both are for proces-
sional purposes and both are surmounted with
the Pelican. They are of silver, enamelled, with
finely-foliated designs beautifully chased. The
small one is in the form of a cross, as will be seen
in the plate.

The altar cross for Lancing School Chapel is
unusual rather in its proportioning; the figure
is small and the arms of the cross with their
emblems seem a little overpowering. Still, the
whole design depends on the position it
has been designed for. There it might look
perfect with its surroundings. The fine silver-
gilt and jewelled chalice for St. Andrew's Church,
Eastbourne, is noble in its proportion, and the
beautifully-jewelled metal at the base of the
stem and the pierced foliated knob are worthy
of note. It is a very fine example of what is
becoming nearly a traditional modern treatment.

The altar cross, candlesticks and vases for the
Cathedral of Nagpur, India, show again quite
a recent treatment. The cross is very well
designed, its enamels and jewels being well
placed. It is in strange contrast to the design
of the cross for Lancing previously described.
The latter is mediæval in nearly all its points of
interest. The one for Nagpur can be only
recognised of a very recent date.

The fine censer of silver inlaid with precious
stones is very architectural in character, such
as a censer needs to be—strong and rigid in out-
line. The whole is extremely good and well-
balanced. Both the designer and craftsman
have attained their object completely. The
brass ewer with the bands of enamelled enrich-
ment has been made for Hexham Abbey, and
follows a traditional mediæval style. It has
been very successfully executed. All these fine
pieces are from the workshop of the Artificers'
Guild. Mr. Omar Ramsden and his craftsmen
have also been extremely busy executing fine
things.

The hand-wrought and chiselled gold chalice
and paten made for Beda College, Rome, is
extremely simple in treatment, as becomes the
metal used for its execution. The chalice is
of rather unusual proportion, the stem being
short and flowing gracefully into a wide base.
The knob is very daintily enriched with a
foliated design in very low relief. The paten
is quite plain. The set of silver ornaments for
the Chapel of Sidney Sussex College, Cambridge,
are very pleasing in the reticence of their design.
The chalice and candlesticks are excellent.
They are perhaps for the small side lady chapel,
and the architectural treatment around by Mr.
Thomas H. Lyon, the architect, governs as it
should their detail. The processional cross in
hand-wrought and repoussé silver for Bath
Abbey Church is unusually elaborate for such
an object. The silver repoussé alms dish with
the figure of St. Peter in the centre and with
the emblems of the Apostles is for St. Peter's
Church, Herne Hill. Among the other fine

pieces are the jewelled pax in hand-wrought
and chiselled gold and silver for the Chapel of
the Middlesex Hospital, and the very fine silver
altar cross for the high altar of Rochester
Cathedral, which is distinctly Renaissance in
character.

The lesson, if any, that can be learned from
this annual Congress is that the artist and
craftsman interested in Church craft work
could, if they would, have a most remarkable
influence over things that are always being
placed in our splendid cathedrals and churches.
They have the opportunity of appearing annually
before a multitude of men and women all anxious
to be shown beautiful work and also desirous
of being advised how to obtain it. If these
men would only really attempt to show what
is being done, and what can be done, the result
would be remarkable, and rarely would be
deplored the placing of "unpleasing things"
into our sanctuaries.

Cannot something be done next year at South-
port to remedy this very great failure? The
Church Crafts League, the Arts and Crafts
Exhibition Society, the Art Workers' Guilds,
the Guilds of the Scribes and Illuminators,
Needleworkers, Glassworkers, naming only a
few, should combine and show these anxious
donors what can be done. To teach an appre-
ciation of good work in all the crafts is their
duty. Here they have an opportunity.

Two other bodies may join in—the Society
for the Protection of Ancient Buildings should
be in evidence to help, and surely the Advisory
Committee in the Diocese should be in evidence
backed by the Central Committee.

This is a programme of easy achievement
if just a little organisation is attempted.

The Honan Scholarship.

The subject for the Honan Travelling Scholar-
ship, 1926 (value, £50 for one year, open to
members of the Liverpool Architectural Society,
Incorporated, under the age of thirty), is the
Terminal Station and Garage of a Motor Bus
Company. Designs marked "Honan Scholar-
ship" are to be delivered at the Society's
Rooms, 13, Harrington-street, on Thursday,
December 31, 1925. The winner of the Scholar-
ship will be announced on "Honan Night,"
Wednesday, January 27, 1926. Candidates for
the 1926 Scholarship must have been Associates
or Students of the Society on December 31, 1925.
Full particulars of the Scholarship may be
obtained from Mr. Ernest Gee, Hon. Secretary.

Vigo House, Regent-street.

We publish this week some photographic illustrations and working drawings of Vigo House, Regent-street, which is now on the point of completion from the designs of Sir John Burnet & Partners (Sir John Burnet, R.A., R.S.A., Mr. Thomas S. Tait, A.R.I.B.A., and Mr. David Raeside). The façades are executed in Portland stone, with entrance doorway and base of building in polished black marble and green Swedish granite. The main entrance doors with flanking lamp standards, and also shop windows, are carried out in polished

bronze. The stone sculptured standing figures, representing "Art" and "Industry," and the seated figure, "The Spinner," are the work of Mr. William Reid Dick, A.R.A. The bronze shield, representing the Pattle of Vigo, was modelled by Mr. George Alexander. The entrance hall, paved with Bianco del Maré marble, with bands of Napoleon and black marble, has a domed ceiling decorated with the Signs of the Zodiac, executed direct on the plaster work by Miss Peggy Hodge, A.R.C.A., who also designed the circular panels in the staircase windows. The internal woodwork throughout has been carried out in polished Ancona walnut, with wall dadoes in Japanese gold paper. The shop window enclosures, designed in simple panels without mouldings, are executed in polished burr walnut, with ebony bands. The shop window blinds bear decorative designs, representing the "Dexter" fox head, designed and executed by Mr. Harry Rowntree. The electric light fittings in polished bronze, together with furniture, carpets, &c., have all been specially designed by the architects to be in harmony with the general treatment of the building.

The general contractors were Messrs. Trollope & Colls, Ltd., and Messrs. P. & W. Anderson, Ltd., and the sub-contractors were as follows: Messrs. Young, Austen & Young, heating and ventilation; R. A. Skelton & Co., steelwork; Tyler & Freeman, electric light installation (inter-communication phones, Ericsson British L.M. Manufacturing Co., Ltd.; sanction phones. Synchronome clocks, Synchronome Co., Ltd.); Crittall Manufacturing Co., Ltd., and Crittall Freeman Bronze, Ltd., windows, external bronze work; Baillie & Telfer, embossed glass;

George Rome & Co. (London), Ltd., plan work; Samuel Elliott & Sons (Reading), Ltd., main staircase in teak, entrance to Vigo (chairs, and all interior hardwood joinery, such as doors, frames, &c.; Malcolm MacLeod & Co., Ltd., granolithic finishings to staircase; T. Ward, oak handrail on lift enclosure; Wills & Sons, Ltd., fire escape ladder; Diesels & Co., Ltd., structural floors, roof and cladding; Fenning & Co., Ltd., marble and granite work; Waygood-Otis, Ltd., lifts; Carter & Co. (London), Ltd., terrazzo work; Shanks & Co., Ltd., sanitary fittings; United Stone Works, Ltd., Portland stone from own quarries, dressed to Sir John Burnet's details, delivered to site and fixed and cleaned down; Gas Light & Coke Co., gas supply; Potter Rax Gate Co., Ltd., grille to Vigo Chambers staircase; Birmingham Guild, Ltd., bronze work; Art Metal Equipment Co., Ltd., steel roller shutter; Pollard & Co., Ltd., sun blinds; George Parnall & Co., shop fittings (including Taylorac, Ltd.); Jos. F. Elner, window block flooring; Sturtevant Engineering Co., Ltd., vacuum cleaning plant; Lamson Pneumatic Tube Co., Ltd., pneumatic cash tubes; Office Telephone Service, phones, time recorders; W. & C. Pantin, spiral chute; Woodward Safe Co., Ltd., safe; Sellars (London), Ltd., bronzing to metal work; Figgott Brothers Co., Ltd., flagstaffs; G. C. Cuthbert & Co., copper electro glazing; Jas. Gibbons, Ltd., door furniture; J. A. King & Co., Ltd., reinforced concrete lantern lights and pavement lights; Jas. Shoolbred, Ltd., carpets and curtains; Wm. Angus & Co., office furniture; E. Kahn & Co., Ltd., chairs. Mr. Dobson, the clerk of works, and Mr. H. W. Crouch, the manager.

IRONWORK AND ARCHITECTURE—II.

By HECTOR CORFIATO, S.A.D.G.

tainly the finest works of the eighteenth century are the grilles of Place Stanislas, at Nancy, by Lamour. The way in which the bars and voids have been distributed is most beautiful. The lines of construction are apparent, and weakness is avoided by the rich decoration which breaks the height of the bars. The principles of composition have long been known in Germany and this country. There

GRILLE AT NANCY, BY LAMOUR.

GRILLE OF THE HOTEL DIEU, CHARTRES.

need to call attention to the beautiful work to be found here in England. All architects and lovers of architecture know the principles which surround us, and to realise this we have only to visit St. Paul's, the Law Courts, Hampton Court, and many other places. But a point to be remarked is that the principles of composition are the same in every country. The conditions of a country, its climate and the national sentiment will certainly influence the work, but the principles of design do not vary. The specimen reproduced below has been designed on very simple lines. We can note how the ironwork is connected with the stone and the principal lines are continuous. The lower horizontal break runs with

SEVENTEENTH-CENTURY GATE AT TOURS.

the mouldings of the pedestal, and is necessary in order to give strength and greater resisting force to the grille. In the Paris Bank grille we have the same principles of design, and the simplicity of the grille stands out by contrast with the rich frame. All this seems easy, but one only realises the difficulties when applying these elementary principles. A curious grille at Avila, in Spain, very simple in its expression, has a singular aspect, produced by the twisting of the upper portion of the bars, while all the richness is reserved for the top. The rules which guide one when designing a grille are the same which must be borne in mind when composing a balustrade, a balcony, or anything else in iron. In a balcony all the pressure is in the direction of the hand-rail, therefore it is necessary for its resistance to have the strongest section of iron in the vertical bars, which can be spaced every 3 or 4 ft. It is in Spain where the most ancient balconies exist. At Salamanca one can find small balconies of Arabic influence which are real chefs-d'œuvre. Often balconies had a big projection in order to give a good outlook on the street, as we can find at the Palais Strozzi in Florence. In France, after adopting complicated fillings, more simple lines prevailed. The same ideas guided the author of the beautiful and simple interior grille which gives access from a vestibule to a staircase (see p. 570). When we decorate an elevation with balconies in wrought iron, we have the advan-

GRILLE WITH MOULDED GLASS PANELS.

tage of not cutting the architectural lines of the building, as we should do if we use stone balconies. At the same time, we have the contrast of the dark colour of the iron against the light stone or brick background. On going into the history of wrought ironwork we learn a lesson. We see that a work of art worthy of the name is never out of place in an atmosphere other than that of its style.

Thus, in the church of St. Ouen at Rouen, which is of the fourteenth century, there are interior grilles of the eighteenth century, and the same thing occurs in the cathedral of Toledo, which is of the thirteenth century, the grilles being of the sixteenth century. This is because no matter what the programme, the composition is independent of the style. Styles change, but the principles of design do not vary. Of course, we do not mean that in a perfumer's shop we can put the replica of a grille designed for a cathedral. This has been done in a West End shop. No work of art is perfect unless it completely suits its purpose. The modern period is marked by different standards of work. Naturally the beginning of each new era is an experimental period, but an artist creates always whether he lives in the twelfth or the twentieth century. From Germany and Austria came the first attempts of modern design. They were rather extravagant and heavy looking. In France, after the international exhibition in 1900, the

GRILLE FOR THE ENTRANCE OF A BANK, PARIS.

art of wrought iron progressed steadily, and here are reproduced some timid examples, which make one realise the progress which has been made. Copper has been used to enhance the decoration of interior grilles, thus providing a brilliant note. Moulded glass has been employed as a very suitable background for wrought iron. Programmes of designs which have never been executed before have been introduced by the necessities of modern life. A beautiful marquise or a lift-gate adds to the decoration of a building's exterior or interior.

In modern treatment of ironwork the source of inspiration is everywhere in nature where a suitable model can be found.

In a certain communion rail all the ornamentation is symbolical, corn and grapes delicately handled indicating the purpose of the grille. By the same author is another modern grille where the treatment of acanthus leaves gives the impression of straps, thus showing how a mediæval motif can give inspiration to a design of our days. The revival of an old technique often results in a similarity between works of the present and the past, as, for instance, an ironwork protecting the hall windows of a school at Frauenfeld (Switzerland) which resembles in detail a delightful wrought-iron gate of the seventeenth century at Farleigh, Hungerford, Somerset. When discussing wrought ironwork, one must not forget to mention a great artist, who, extracting all profit from the lessons of the past, gave to the art of wrought iron a new life. The artist who really created a personal style is Mr. Brandt.

STAIRCASE, PALAIS DE JUSTICE, PARIS.

INTERIOR DECORATIVE GRILLE.

The design of a staircase for a theatre in Nancy is a striking example of modern wrought iron. Original and remarkable for its new treatment, the principles which govern it are very old. But often, too, effects can be obtained by the opposition of dark wrought iron-work against a suitable background, evidence of which we have in a portion of this interior staircase, the oblique lines contrasting vividly with the vertical joints in the background. In interior grilles mediæval works are suitable examples if appropriately treated. Scrolls are a very old motif, but they can always find their way into modern design. In recent years public attention has been drawn to the different uses of interior decorations in wrought iron. These works deserve to be admired. They are the accompaniment of architecture and contribute to the general effect, and the architect should have a very sure judgment when designing an ensemble. Among all crafts wrought iron is certainly the one where an artist can show most of his individuality.

There are many ways of designing a modern chandelier. It depends on its destination—whether for a drawing-room, dining-room, hall, etc. Other interior fittings can be appropriately treated in wrought iron, including mirrors, screens for radiators, fenders, etc.

MIRROR FRAME IN WROUGHT IRON.

The wave of modernism in design has even penetrated to the old Ecole des Beaux Arts in Paris, and in one of the recent programmes given to the students on a grille for a museum it was stipulated that the design should be entirely modern. No one must think that modern design consists of demolishing the classic, as modern art is its natural continuation.

The students of the Ecole des Beaux Arts have shown that they were able to treat very happily the programme given, which consisted of a grille, 21 ft. wide and 36 ft. high, with small service entrances, and the large one to be used by the public. In the first design the doors are of distinctly different proportions with very solid frames. All the attention is drawn to the lower part, while the upper portion consists of decoration without projections. In the second the same subject has been treated differently, the door being heavy with six motifs as its chief enhancement. In the third a certain monotony would have existed without the upper three motifs. It is interesting to consider some sides of the problem which presents itself to those who have to deal with the charms of architecture. We know how iron is worked, how it is found,

SCHOOL SUBJECT FOR A MODERN WROUGHT IRON GRILLE, ECOLE DES BEAUX ARTS.

must be known to most designers), but it be remembered that scrolls are a characteristic element and that their execution requires much experience. Touching the composition of grilles we can divide them into two types: exterior, which enclose a garden or space, or protect a window, and interior, which are used as partitions in a room allowing light to pass through. The conditions of two types of grilles are quite different. exterior grille must be first of all resistant and often, in order to give an impression of greater strength, the bars are of larger section than necessary.

Exterior grilles accompany the general texture, and we have much freedom in decoration. As they can be seen from a distance it is the general effect which is important. They must be simple so that when one takes a lateral view of the design it will not be confused. Their proportions play a big part. On examining the most beautiful examples one sees that the decoration is reserved for the principal part, that is to say, the entrance, while the monotony of the railings is broken by a motif repeated with regularity. It is no need to attach great importance to small details as in order to be protected

SCHOOL SUBJECT FOR A MODERN WROUGHT IRON GRILLE, ECOLE DES BEAUX ARTS.

and how it is treated. It would be useless to give all the details, but we must retain this. We can give any shape to iron when red-hot, and we can weld it. From these properties all the theory of wrought iron is derived. They impose themselves on those who first tried to utilise iron as a factor of safety. Welding is the most important of the operations. Iron, which cannot be melted like copper, silver, or lead, can be welded at a temperature of 1,200 or 1,400 degrees Centigrade. Welding well executed is invisible, the two pieces making one, and one can obtain thereby most beautiful effects. With modern perfections all difficulties can be surmounted so that one can produce specimens which no master of the past would ever have dreamt of attempting.

Stamping has often been used. It is a kind of seal where the desired ornament is engraved in hollow. The bar of iron brought to the nearest shape of the design is heated and then put on the seal, and with violent blows of the hammer, is inserted into it. Often a double stamp is used to execute certain ornaments. Most of the wonderful old straps known have been executed in this way. We shall not attempt to explain all the practical sides of a piece of wrought iron (which

SCHOOL SUBJECT FOR A MODERN WROUGHT IRON GRILLE, ECOLE DES BEAUX ARTS.

iron must be covered with oil paint, and coats of paint take away all finesse in ornamentation. Therefore it is preferable to treat the ornament in a broad way. On the other hand, interior grilles are to be seen from short distance. They form part of the interior decoration. Seen from very close and most always in full view, the decoration must be delicate. Being protected from the exterior air they do not need to be painted. On the contrary, they can be polished, the strokes of the hammer adding to their enhancement.

Remembering this in mind, the architect or designer who has to solve a problem of this sort must try to find the true and logical expression of the positive conception, and the ideal composition which depends on the richness of imagination. A large variety of solutions may be reached when examining the problem of a grille.

An exterior grille might—

Enclose a garden or yard; it should be simple, and composed of doors and repeated life.

Be the outer screen of a courtyard of a private residence; it should be composed of a gateway for carriages and a small one for pedestrians.

Take the place of a door.

Be used to protect windows situated near the ground; the bars should then be very close together to prevent people seeing in from the side.

Interior grilles might—

Protect a chapel in a church; they should be high.

Be a partition to show a space reserved for some high officials.

Be grilles for a lift.

Or be a low rail where people could lean, a communion rail, a rail in a museum surrounding precious objects, and so on.

Hence several solutions offer themselves which can vary, this depending on the purpose of the work, the programme, and the scale of execution. Naturally the construction of a grille will change according to its destination, it is preferable to leave apparent the lines of construction. The study of a staircase or a strade would present as many points to be considered.

To conclude, one should be original: first understand the problem well and solve it by reasoning, and by using in the right way the material at hand.

The conditions which determine a style vary with the progress of life.

The architect only reflects the life of his period. The past teaches us a lesson, and gives us inspiration, and when designing let us not forget what Keats said:

"A thing of beauty is a joy for ever."

SCHOOL PROSPECTUSES

ROYAL COLLEGE OF ART.

The Royal College of Art, South Kensington, is maintained to give to advanced students an opportunity to equip themselves for the practice of art, in drawing, painting, engraving, sculpture, and design for architecture, decoration, handicraft, and manufactures, and to give professional training to those students who, after completing the ordinary College course, desire to prepare themselves primarily for teaching in Art Schools.

Besides the main schools the College provides classes in writing and illumination, the history of art, and the methods of teaching, and workshops for the practice of the crafts of stained glass, pottery, embroidery, furniture-decoration (including wood carving and gesso work), and metalwork and enamelling.

Inquiries from intending students should be addressed to the Registrar, Royal College of Art, South Kensington, S.W.7; the prospectus, price 6d., may be obtained from any bookseller.

NORTHERN POLYTECHNIC.

The Northern Polytechnic is one of the schools recognised by the R.I.B.A.; exemption from the R.I.B.A. Intermediate Examination is granted to students who complete the full three years' day course in the school (or the five years' evening course), and obtain a first or second class pass in the school examination. The course of study comprises architecture and art, construction, science, and hygiene.

Prospective students should write to the Polytechnic, Holloway, N. 7, for particulars.

LEYTON TECHNICAL INSTITUTE.

The Essex County Council Technical Institute at Leyton has sent us the prospectus for the coming session, containing the programme of the Architectural and Building Trades Department. The classes are held in the evening and provide an opportunity to all for acquisition of a comprehensive knowledge of these subjects; quantity surveying is also dealt with exhaustively. A staff of highly qualified teachers is employed. Intending students should write for particulars of syllabus, fees, &c.

MUNICIPAL SCHOOL OF ARTS AND CRAFTS, SOUTHBEND-ON-SEA.

The prospectus of the Southend-on-Sea Municipal School of Arts and Crafts for the coming session is to hand. The school affords instruction in all branches of drawing, painting, modelling, design, and its practical application to handicraft, architecture, figure drawing, Composition, &c., and this is adapted to the special requirements of students desirous of following a course to enable them to produce high-class decorative work as handicraftsmen, or as a preparation for Art teaching. The architectural section of the school has been augmented by a fourth year course for advanced students, and an additional wing has been built for the purpose of demonstrations in the uses of building materials. A comprehensive syllabus has been drawn up in order to equip students for employment as junior assistants, and for the Intermediate and Final examinations of the R.I.B.A., and the examinations of the other professional bodies.

The Committee, desiring that financial considerations may not hinder advancement, have provided a moderate scale of fees, which together with a scheme for scholarships and free studentships, gives to those possessed of industry and ability an opportunity to acquire sound training under favourable conditions.

Rome Prize.

Mr. E. I. Halliday, of Liverpool, has been awarded the Prix de Rome for painting. Mr. Halliday received his artistic training at the Liverpool City School of Art before proceeding to the Royal College of Art.

WROUGHT IRON GATE, L'AGE D'OR.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—Ed.

Plans and Local Authority.

SIR,—The six houses shown on the accompanying sketch have recently been erected near the junction of a secondary street with a main street. The Corporation insisted on the houses being set back 40 ft. from the street, but passed plan of house on site B, which is only 6 ft. 9 in.

from the secondary street. Mr. A. purchased the whole of site A, and sold to Mr. B. site B, reserving 10 ft. of land at the end of site B as a back entrance to his garden and to a garage. The owner of house C also requires a garage, and Mr. A. is willing to fall in with the arrangement shown on plan, provided Mr. C. can get the plans passed. This the Corporation have refused to do, insisting on both the garages being set back 40 ft. What is the legal position; seeing that the Corporation have passed Plan B, 6 ft. 9 in. from the road, can they insist on every other building being 40 ft. back? As soon as funds will allow the owner of house B intends putting up a building at the back of his garden. Can he be precluded from so doing? The 10 ft. at the end of Mr. B's garden was retained by Mr. A. through the goodwill of Mr. B. and might be considered as part of his garden.

"HOUSE C."

[A local authority can only object to plans submitted for approval if they infringe some statute or by-law, and in any case the authority must approve or disapprove such plans within a month after submission. By Section 3 of the Public Health (Buildings in Streets) Act, 1888, it is not lawful in any urban district, without the written consent of the urban authority, to erect or bring forward any house or building, in any street, or any part of such houses or building, beyond the front main wall of the house or building on either side thereof in the same street. A house at the corner of two streets may be in both streets for the purposes of this enactment.]

Though no buildings on either side of the four houses shown on the plan in the "main street," or of the two houses shown in the "secondary street" are indicated, in view of above the Corporation was no doubt entitled to enforce the houses being set back 40 ft. as shown, and to waive the right to enforce their powers in respect to the house "B," hence the setting back 6 ft. 9 in. only on the return of the said house in the "secondary street."

Now there is no question but that the proposed garage is a "building" and subject to the by-laws in force in the locality, and that in view of the powers indicated above, the Corporation can disapprove any plan submitted for bringing forward any building in front of the house "C," inasmuch as this house is on one of the sides of the proposed garages in the same street at the rear of houses "A" and "B." Our correspondent should make representations to the local

authority, with a view to a compromise, because of what has been permitted in the case of the house "C"; but, if he fails to do so, he has no legal remedy, and both garages must be set back 40 ft. The whole matter is for the local authority to determine.]

Lath and Plaster Repairs.

SIR,—What is considered to be a fair charge per square yard for cutting out old lath and plaster work to walls and ceilings, repairing laths and making good with lime and hair and finishing in Sirapite plaster? I have dealings with various builders and find their

prices vary so considerably for similar work that I should be glad to know what prices are being paid generally.

A MANAGER OF OLD HOUSE PROPERTY.

Treatment of Dairy Floors.

SIR,—I should be glad if you could give me any information regarding a really satisfactory method of laying a dairy floor. Part of the floor in which I am interested at the moment was treated about two years ago with asphalt in two-coat work. The floor now is beginning to peel and water is getting in between the coats. The dairy is a large one dealing with some hundreds of churns a day so the wear on the floor is very heavy. Would a very fine gravel concrete laid with steel netting be a more satisfactory method?

"DAIRIES."

Boundary Wall Questions.

SIR,—"A" has a house at the end of one side of a *cul-de-sac*. "B's" garden runs down to "A's" flank (not party) wall with a shed at one end about 7 in. away from wall; this shed has a roof sloping backwards, throwing all its water on to the wall. Originally a fence separated the garden from "A's" property by a space of 6 in.; the fence has rotted, has been removed, and the garden mould allowed

to pile up against the wall, as hatched. The result is that "A's" wall is damp. "B" has given permission of access to his premises for the purpose of putting a vertical damp course, which has been done, but only partly behind the shed, which "B" refuses to have moved; he also insists upon piling up his mould against the wall. Has he any right to do this? and can he be made to remedy the damage behind his shed and to reform its wrongly-constructed roof?

"OLD READER."

EXHIBITION NOTES

THE R.I.B.A. GALLERIES.

There has been a good deal of appreciation on the exhibition of Mr. R. Hallward's paintings and drawings and at the R.I.B.A. Galleries. The admiration in which the exhibits were displayed provides a sympathetic environment for work of essentially poetic and idealistic. Carto country figured largely on the walls, and that there was displayed in the design interest and value much beyond what usually finds in this kind of work—it is to be really interested in such designs. of war memorials in the French cathedral Lieut.-Col. Lafontaine and Mr. Hallward one to realise the quality of this excellent. Nine of these memorials have already been.

An interesting part of the exhibition is fifteen panels of painted glass erected in the middle room in the form of a peepshow. The panels have a highly decorative value, and are used very effectively in almost every place.

The pictures—which, after all, formed part of Mr. Hallward's exhibition—are essentially decorative kind, and many of them have an arresting quality of form and colour, though the sobriety of treatment generally doubtless fail to gain a very popular. Many admirable drawings in black and white attest the artist's power of design. The exhibition must have left an impression of endeavour and much successful achievement on all who were qualified to judge of art from a high standard.

WATERCOLOURS BY MR. STEWART R.S.W., F.S.A. (Scot.).

Mr. Stewart Orr shows a collection of water-colours of Iona and the Isle of Arran in the galleries of Mr. Wishart Brown, 136, St. Vincent Street, Glasgow. He depicts these two islands under all conditions, and his sunny, transparent handling catches the spirit of these places in a convincing manner. In his sketches, the Cathedral does not bulk as a ground object, but in the four sketches of figures in the middle distance it is depicted in a understanding and truthful manner. His architectural training has saved him from common mistakes which artists usually fall into in treating architectural subjects. As a painter of mountain scenery, stretches of sand, streams, breaking waves and woodlands, gained a place among Scottish water-colourists as an exponent of the spirit of the rugged grand. His show is well worth a visit.

MEDIAEVAL AND RENAISSANCE ARCHITECTURE

At the Central School of Arts and on the 7th inst., Sir Banister Fletcher, V.P.R.I.B.A., gave a lecture on the comparative Analysis of Gothic and Renaissance Styles in Europe, in respect of plans, openings, roofs, columns, mouldings and ornament, as well as the general principles of medieval and religious or other motives pervading two great styles. The lecturer contrasted differences and emphasised the beauty of strength inherent in both. Renaissance was large in scale and few in its parts, as in the figure, and consequently of many parts larger structures. A series of lantern prepared the audience for the detailed exposure of Renaissance architecture which is to be in the succeeding lectures.

Nottingham Housing Scheme.

The Nottingham City Council has decided to erect 1,000 houses of the "Crane" type on Wollaton Park estate, at a total cost of £500,000.

THE BUILDING TRADE.

HINTS TO BUILDERS

By J. H. BARNES, F.I.O.B.

is usually stipulated that the builder provide a competent foreman who is to be on the work for the whole of his time, and, of course, the work is of sufficient importance to justify such a course. The foreman is expected to be something of an "Admirable Crichton," and it is usually assumed that by skill, painstaking care and that he is able to carry out the works from scrappy drawings, diverse instructions and intermittent supplies of materials. It is impossible to indicate the extent of a foreman's duty. While any such list would be somewhat overwhelming, it should be in the mind that after all even a foreman can only do one job at a time.

It is not intended that the following notes be taken to be in the correct order, as the progress and possibilities of each building job will call for effort in different directions. One of the most important matters in connection with building is the selection of a foreman and the general organisation of the work.

A foreman should be a man who has risen from the ranks, and has risen because of his outstanding qualities of skill, loyalty, and devotion to his duty. Builders prefer their foremen to have been carpenters, others prefer bricklayers, etc., though each trade may have its advantages for some particular job, for all-round work it does not seem to matter very much in what branch of the building trade a man has received general training; it is in himself that counts. All foremen should have passed some technical training in one or other of the building schools. It is essential for him to know the craft side of the trade, and in addition he must be a good organiser of men and filled with the desire to do his best to produce the work as efficiently as possible, and possess that great asset—the power of getting on with

these days one hears a good deal about the importance of organisation, and as far as the foreman is concerned it should mean personal organisation and supervision of the work in all its details during progress. He must order the materials required for the job through the architect's office and, if needs be, press for them to get them. The order in which they are delivered, and the unloading and stacking of them, require a great deal of common sense to avoid unnecessary handling, but one often finds that the materials come in in the wrong order or unequal quantities, such as a large consignment of bricks and very little of the other materials, and all the arrangements for the convenient disposition of materials may be complicated with, which may necessitate the use of materials already stacked on the site at the expense of rehandling the materials to be avoided so far as possible.

A foreman is required to keep records connected with all day or extra works, check all materials delivered to the site, take the time, and generally be responsible for the manifold details of construction and processes of the work. On a large job the foreman will have competent assistants in each department, and many ways be relieved of the general management of a building in course of erection; but on a job of medium size a foreman will have to perform diverse duties to attend to, and he should not expect the foreman to do clerical work.

An elaborate system of costing is required to be kept up by the firm, the foreman should not be expected to spend much of his time on such work, as otherwise the progress of the job must suffer. The foreman should be

the producer of the work and not relegated to the position of junior clerk.

The direction and general control of the workmen will be a never-ending task to call forth all his best powers, and good results will only be obtained by careful consideration of the work, anticipation of difficulties, and a resolve to have everything cut and dried before the men are put on to the work, as nothing so retards the output as indecision, unpreparedness, or alteration of the work during progress. The foreman is sometimes placed in the position that he is awaiting some particulars or instruction relating to the work, and until these are received he is handicapped because the sphere of his operations is circumscribed.

One often hears it said: "What does it matter whether you fix the window opening 6 in. farther north or south?" and while these and similar questions are being debated many pounds are being wasted because the general flow of the work is impeded. In no other industry do so many pettifoggish alterations and variations occur during the progress of contract work.

The builder should make a point of frequently visiting the works and conferring with the foreman, and firmly dealing with any matters which are delaying the work, as a contract is usually arranged on the supposition that it is a "straight-away" job; but if the job becomes one that can be carried on only in some trades intermittently, then the contractual conditions may be completely altered and a serious position arise.

A foreman is expected to be able to find sufficient skilled workmen to carry out the work, and in these times this is a matter of some difficulty, as however good the workmen may be, when their particular work on the contract is finished they must leave the job, and the builder should try as far as possible to transfer the various trades, as they finish their part of the building, to other contracts, and so arrange constant employment for suitable men who would form a nucleus of a staff which can be relied on to give a reasonable output and deal with any urgent job which may be given to the firm. Instructions given to a foreman on the job by the architect should, wherever necessary, be notified to the office, so that the builder is acquainted with them, particularly if they involve any variations or alterations, as the contract usually stipulates that instructions given to the foreman are deemed to be given to the contractor.

If the architect proposes to make a small alteration on one of the detailed drawings, he should be asked to initial it for the purpose of record, although most architects adopt this course without being asked to do so. The foreman should arrange for work to be finished in the builder's or other workshops before sending on to the building, as it is much cheaper for work such as joinery and ironwork and many other trades to be completed on the bench or in the maker's works than to have them sent on the job in an unfinished state and get special trades to finish the article in position.

This may seem somewhat obvious, but the foreman is sometimes placed in a difficult position for want of some material or manufactured article, and it is a question which is better—whether to stop that portion of the job and send away the men, or endeavour to get the article or fitting in question, even if unfinished, so as to allow the general works to proceed, even if it may mean increased expense for dealing with unfinished fittings at a later date. It is not always expedient to ask which is the cheapest method of carrying out any particular portion of the work, as one must take cog-

nisation of the whole of the works and the question must be settled in relation to the whole job. The whole of the materials must, of course, be ordered in sufficient time to enable them to be prepared and delivered; but it often occurs that instructions are not received in time to allow materials to be prepared as mentioned above. The foreman must make up his mind whether to leave down a portion of the work and carry out what work he can in odds and ends of places at greatly enhanced cost, or send the workmen away. The latter may seem to be a somewhat bold step to take, but it does emphasise the point that the foreman is waiting for instructions or materials, and the possibility of a profit being made on the job is receding.

The foreman should be supplied with a diary and be instructed to keep a note of all matters delaying the work and the time lost thereby, and of the occasions when the job is stopped by stress of weather, and periodically forward a copy of the record to the office. He should also keep a note of the occasions on which the architect or the employer visits the work, together with the instructions he may then receive. The position of the foreman in relation to the specialist firms and sub-contractors is sometimes a very difficult one, as the firms in question usually receive their instructions direct from the architect.

The leading specialists or sub-contractors for building work may be relied upon to know their business, and will consequently send their representative to meet the foreman to make arrangements for the disposition of materials and men, but some other firms may commence to send their stuff on the job, and without "advice" or sending any men to unload, and the foreman is placed in the position that he must get his own men to do the unloading or send the goods away. These and similar practices are likely to cause friction.

The sub-contractor or specialist will usually request the builder's foreman to give them sizes and dimensions to enable them to carry out their work, but the builder should make a rule that the firms who are doing the work should take their own sizes and be responsible for the accuracy of them. This is the only safe method to adopt, as the men who are doing the work should attend on the job to see that the proposed work will fit in with the general arrangements of the building.

From the foregoing remarks one will see the necessity of providing the foreman with a suitable office; this would probably need to be a temporary affair, but it should be warmed and lighted, and have a telephone fitted. When the foreman has the drawings and specification given to him, he should carefully compare the plans with the site of proposed building to see that they fit in, and commence to set out the building in connection with the adjoining property, if any, and define, where possible, the general building line and get some person in authority to approve this, also take the general level of the site and see how this compares with the drawings. He may then endeavour to set out the whole of the building at a certain level to "full size" or to a "large scale." In some cases it may be possible for him to set out the whole of the frontage line at one operation, but he must bear in mind that if the setting-out is done on two or three different boards at different times, there is a chance of the setting-out not exactly fitting in and creating all sorts of difficulties. The "full-size" setting-out will enable him to determine whether it is possible to carry out the drawings exactly as shown, and if he finds any difficulty in getting the drawings to fit in (as the boundaries of the site are usually difficult to determine), he would have to take the matter up with his employer, who would in due course approach the architect to obtain a decision on the question.

A NEW MASS PRODUCTION MATERIAL

FROM A CORRESPONDENT.

OFFICIALS of the Ministry of Health and of the Building Research Board are taking a keen interest in the experiments that are now being carried on in the mass production of houses in a factory at Crayford. Commander Burney, M.P. is responsible for a new material known as Factocrete. This is made of shredded wood that is first impregnated with certain chemicals in order to prevent the contraction or expansion of the wood with moisture. This is mixed with cement and other concrete materials, and also with a colouring and waterproofing material. The next stage is compression into a block by means of machinery which has been specially installed in the factory. This makes a block equivalent to sixty bricks, and work has just commenced in the manufacture of these blocks for the L.C.C. These blocks can easily be handled by two men. They can be divided with a saw, and nails can be driven in. Thus they can be placed in position in the house rapidly by unskilled labour, and are held together by grouting with no-mortar bed. This is in fact a real factory-made house, and in time it is hoped that the window frames and the staircases will be made of the same material. As the material is comparatively light, it will be possible to carry the parts of a complete house on three large lorries. The total weight of four Council houses, two parlour and two non-parlour, is estimated to be about 52 tons, as compared with 300 tons, the weight of similar brick houses. Should Mr. Neville Chamberlain's possible Bill for encouraging mass production materialise, it is probable that factories for the construction of these Burney houses will be used at certain centres. Given the suggested capitalised subsidy, it is proposed that these houses should be available for sale in town at £200 each, and in agricultural parishes at £160.

PRACTICAL MEASUREMENT OF AIR FLOW

At the autumn meeting of the Institution of Heating and Ventilating Engineers, held at Caxton Hall last week, Mr. E. Owen, B.Sc., A.C.G.I., of the National Physical Laboratory, read a paper on the measurement of air flow. The author treated the subject from an engineering standpoint, confining his attention to instruments and methods suitable to industrial use. He dealt at some length with the pitot tube, both in its usual form and with modifications, explaining the conditions to be observed in designing alternative types for use in special cases. When doubt was felt as to the actual direction of flow in a pipe, at a section near to a bend for example, it was advisable to use a disc static head which was much less sensitive to variations in direction than the ordinary types.

Dealing with manometers, the lecturer described and illustrated three types suitable for factory work. For all-round usefulness combined with accuracy and ease of observation, he advocated the Krell form of inclined tube manometer; the only disadvantage of this instrument was that it was not a fundamental standard and required calibration. Reference was also made to a tilting micro-manometer whose calibration could be calculated from a knowledge of its dimensions, and to a two-liquid gauge. The latter was of value for work where high precision was not needed, but greater accuracy was required than could be obtained from an ordinary U-tube water gauge; it was capable of giving a magnification of about 10 to 1.

The orifice plate and Venturi tube were described, attention being drawn to the facts that these instruments gave rise to considerably larger pressure differences than the pitot tube, and that they were eminently suited to the taking of continuous records of flow. The question of the discharge co-efficients of orifices was discussed at some length, reference being made to Hodgeson's work on this subject. The lecturer dealt also with the construction and use of vane anemometers, the calibration of manometers, and the testing of connections and instruments for leaks. In the latter connection he emphasised the necessity for testing all rubber leads, since even new rubber tubing sometimes showed traces of porosity.

struction and use of vane anemometers, the calibration of manometers, and the testing of connections and instruments for leaks. In the latter connection he emphasised the necessity for testing all rubber leads, since even new rubber tubing sometimes showed traces of porosity.

A MANUAL OF INDIAN TIMBERS *

UNTHINKING exploitation has so reduced the forest land in many parts of the world that the supply of timber is now considered to be small in comparison with the demand. The Indian Forest Department is setting a splendid example of intelligent cultivation of natural resources in systematising management and stimulating the experimental study of arboriculture; and the authoritative description of the trees and shrubs of India, by Mr. J. S. Gamble, M.A., possesses a high commercial value as well as great botanical interest, since, apart from the question of export, the mere supply of timber for local purposes in India is an expensive item.

The importance of Indian timbers to the Empire and the scope of the book are indicated in the Introduction, where it is stated: "The area administered by the Forest Department amounts to nearly 118,000 square miles, of which about 81,000 are reserved forests—that is, forests demarcated and legally settled as a permanent Government forest estate. The permanent forest area, it may be remarked, amounts to only 8½ per cent. of the total area of British territory—945,000 square miles. The net revenue after paying all charges is about £500,000; it should be noted that this sum does not include the value of the very large quantity of produce which is supplied free to the people." The geographical distribution of each tree described in the text is indicated by reference, by means of an initial letter, to one or other of eight principal districts. H, for instance, stands for West Himalaya, comprising the mountains of that range from the Indus to the Sardah River, on the Nepal frontier. Particulars dealt with include the character of the tree's growth; thickness, colour, and texture of bark; colour, weight, hardness, and nature of the grain of the wood; and the appearance of its pores and medullary rays.

The locality and altitude at which each class of tree is usually grown, the speed of growth, and the uses to which the timber is put are generally treated at some length.

In the case of important building timbers the values of certain technical constants are also given, the authorities for the figures being quoted, and the sizes of the experimental test pieces mentioned.

The methods of cultivation and of conversion are described where the value of the timber justifies the expense of space or where the nature of the subject demands special treatment. For boxwood, which is liable to be reduced to one-tenth of its maximum selling price if it becomes badly shaken in seasoning, the following procedure is recommended: "It should be cut down in winter, and, if possible, stored at once in airy wooden sheds, well protected from sun and rain, and not to have too much air through the sides of the shed, more especially for wood under 4 in. diameter. The boxwood also must not be piled upon the ground, but be well skidded under, so as to be kept quite free from the effects of any damp from the soil. After the trees are cut down, the longer they are left exposed the more danger is there afterwards of the wood splitting more than is absolutely necessary during the necessary seasoning. . . . In the Himalaya it has been found best, after felling the trees and sawing them into suitable

billets, to cut one side of each billet free circumference to the centre, so that if liable to split, merely enlarge this and keep the rest of the wood free clefts."

The teak tree (*Tectona grandis*) is the principal source of building timber (other than bamboo) in use for permanent structures in the East. "In Burma the teak is not green, but is girdled standing, so as to die, and it is felled and the dry timber is then transported later on. In India the wood is green, notwithstanding the defect that the side of the trunk which is in contact with the ground takes a long time to dry, the seasons unevenly, and is less useful as a durable, and when thrown into the water does not float readily."

Though appealing primarily to the interested in the conservation and management of Indian forests, the book contains a quantity of information as to local methods of conversion and uses of timber that make it an excellent reading matter.

An index of European names, vernacular names, and scientific names is included. The book is illustrated by photographs of sections enlarged to 3½ diameters.

LABOUR AND HOUSING

SOME little time was spent by the Labour Party Conference at Liverpool discussing the question of housing. Ever since the following resolution, moved by Mr. (the late First Commissioner of Works) on behalf of the Executive Committee, was carried:—

1. This Conference is of the opinion that the problem of working-class housing will be solved apart from the provision of a million houses for the purpose of meeting the existing shortage, with its accompanying overcrowding, and replacing the number of houses which are unfit for habitation.

2. It believes, moreover, that the urgent need of the provision of houses to be let within the means of the workers, and that need cannot be met by the Chamberlain under which about two-thirds of the houses erected have been built by private enterprise for sale to the more fortunately placed, neglect of the less fortunate and badly-situated section of the community.

3. It therefore urges the wholehearted adoption of the Wheatley Act by local authorities as the best means of dealing with the housing problem, and the maintenance of rent controls until an adequate number of houses is provided.

4. In order to ensure that there shall be adequate supplies of building materials at reasonable prices, this conference calls for the passage of the Building Materials (Control) Bill, which provides for the fixing of prices where they have been proved excessive, and empowers the Minister of Housing to requisition stocks and output, and call upon businesses concerned with the production and supply of building materials, where supply is unreasonably withheld.

Scientific Instruments Catalogue.

We have received from Messrs. C. Baker & Co., High Holborn, London, this quarter's catalogue of second-hand scientific instruments for sale, surveying section of which might be of interest to readers. All instruments are guaranteed to be in perfect adjustment; and attention is drawn to the fact that prices have again been reduced.

An Electrocuted Fireman.

Under the City of London Fire Insurance Act, an inquiry was held recently by Dr. Walder, concerning a fire that broke out from an underground cause at Byron House, Finsbury-street. The fireman engaged in fighting the fire was electrocuted through the metal part of his helmet coming into contact with a tube which contained a live wire. The Coroner declared that the time had arrived when the regulations of the Institute of Electrical Engineers in connection with wiring should be made compulsory.

* "A Manual of Indian Timbers: An Account of the Growth, Distribution, and Uses of the Trees and Shrubs of India and Ceylon, with Descriptions of their Wood Structure." By J. S. Gamble, M.A., O.I.E., F.R.S., F.L.S., late of the Indian Forest Department. Reprint of second edition, with some additions and corrections. (London: Sampson, Low, Marston & Co., Ltd. 1922.) Price £3 3s.

After an interval of two years the Commercial Motor Transport Exhibition opens at Olympia on October 29, for ten days, and in connection with it *The Commercial Motor* is publishing three special numbers. They will contain full reports upon the exhibits and much special information of interest to users of motor vehicles.

BRITISH STANDARD SPECIFICATION FOR PORTLAND CEMENT

THE British Engineering Standards Association has just published a new issue of the B.S. Specification for Portland cement (No. 12-1925) which was last revised in 1920. Since that time it has been found desirable to make certain changes to bring the B.S. Specification more into line with present-day requirements and to meet prevailing conditions of manufacture and testing in hot climates. In the course of the work of revision a more precise method was sought than that heretofore adopted for determining the consistency of the neat cement paste for the tensile and setting time tests. Extensive investigations were carried out, but no method was found which could be considered unquestionably more reliable, and the directions of the previous editions of the B.S. Specification have therefore been retained. The investigations are being continued in the hope that some satisfactory means may be found which can be included in a future edition of this specification.

The following are the principal alterations embodied in the 1925 edition of the specification:—(1) A summary of the tests is given at the beginning. (2) Provision has been made for testing in hot countries at temperatures up to 95 degrees Fahrenheit. In climates where the temperature runs above 95 degrees or below 58 degrees special arrangements have to be made between the vendor and the purchaser unless the ranges given in the specification can be artificially produced. (3) The cement is now required to be more finely ground, the permissible residue on a 180 by 180 sieve being 10 per cent. instead of 14 per cent. Tolerances are laid down for the number and size of wires and size of openings in sieves both for cement and for sand. The minimum size of the sieving area is now specified to be 50 square inches and the minimum depth of the sieves to be 2½ inches. (4) The maximum figure for the hydraulic modulus has been raised to 2.90 and the maximum limit for magnesia is now 4 per cent. (5) The minimum tensile breaking strength of neat cement after seven days has been increased to 600 lb. per square inch, and that of cement and sand after seven days to 325 lb. per square inch. The 28-day test on neat cement has been eliminated. (6) The amount of water for gauging cement and sand briquettes is now to be ascertained by means of a formula based upon the amount needed to produce the plastic mixture required in the tensile test for neat cement. (7) The Standard Leighton Buzzard sand is required to be of the white variety, and its loss of weight on extraction with hot hydrochloric acid is specified not to exceed 0.25 per cent. (8) The initial setting time of normal setting cement is to be not less than 30 minutes and the initial setting time of quick-setting cement not less than 5 minutes.

Copies of this publication (No. 12-1925) can be obtained from the B.E.S.A. Publications Department, 28, Victoria-street, London, S.W., price 1s. 2d. post free.

Survey of London.

The Royal Commission on Ancient and Historical Monuments announce that the second volume of the Survey of London will be ready for publication early in December. It will include the whole of the county west of the City boundaries and such boroughs to the north and south as form a convenient limit. The buildings described will comprise the Royal palaces, the Houses of Parliament, Whitehall, Lambeth Palace, two of the Inns of Court (Lincoln's Inn and Gray's Inn), Staple Inn, the Charterhouse, and many important private houses, such as Holland House, Kensington.

(For rates of wages in the Building Trade in Scotland, see page 580)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk advertised in this number. Certain conditions beyond those given in the following information imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, &c.

OCTOBER 19.—**Bristol**.—REPAIRS.—Painting, paper, &c., at 384, Southmead-road, Southmead; painting, &c., at Mill-lane Relief Depot, Mill-lane, Bedminster, Bristol, for the T.C. T. S. Lamb, Clerk to the Guardians, St. Peter's Hospital.

OCTOBER 19.—**Cdine**.—HOUSES.—For (1) plumbers' and glaziers' work, (2) slaters' work, (3) plasterers' work, (4) electricians' work, for the T.C. Borough Engineer and Surveyor.

OCTOBER 19.—**Dublin**.—DWELLINGS.—Eighteen dwellings and the conversion of two existing buildings to six dwellings at Keogh Barracks, for the C.B. J. Murphy, Town Clerk. Deposit £1 1s.

OCTOBER 19.—**Enniskillen**.—GARAGES.—Motor garages, for the United Co-operative Baking Society. J. J. Connelly, M.R.I.A.I., architect, Enniskillen.

OCTOBER 19.—**Finedon**.—HOUSES.—Twenty houses, for the U.D.C. A. E. Lloyd, surveyor.

OCTOBER 19.—**Glasgow**.—ELECTRIC LIGHTING.—Electric lighting work proposed at the Public Baths, Abbots Loan and Water-street, Cowcaddens, for the C. J. Lindsay, Town Clerk.

OCTOBER 19.—**Plymouth**.—HOUSES.—Two blocks of houses containing 24 flats, at Pottery Quay, for the B. J. Witherley, Borough Engineer and Surveyor. Deposit £2 2s.

OCTOBER 19.—**Southend-on-Sea**.—CONVENIENCES.—Public conveniences and works incidental thereto at Millwell Park, for the C.B. R. H. Dyer, Borough Engineer. Deposit £2.

OCTOBER 19.—**Thame, Oxon**.—HOUSES.—Erection of 32 houses on the East-street housing site, for the R.C. J. T. Robinson, Council's Architect, Town Hall, Thame. Deposit £2 2s.

OCTOBER 20.—**Belfast**.—ALTERATIONS.—To Branch No. 4, Carlisle-terrace, Crumlin-road, for the Education Architect, Education Office, College Avenue West.

OCTOBER 20.—**Blackrock**.—HOUSES.—Six one-story and six two-story houses at Gretto-avenue, Booterstown, for the U.D.C. J. J. Robinson, architect, 8, Trion-square, Dublin. Deposit £1 1s.

OCTOBER 20.—**Braintree**.—HOUSES.—Twelve houses situated, six at Blackmore-end, Wethersfield, eight at Wethersfield, eight at Terling, eight at Rayne, and six at Finchfield, for the R.D.C. E. O. Wheeler, using Surveyor, 71, Rayne-road.

OCTOBER 20.—**Carlton**.—HOUSES.—Four parlour and four living room type houses on the Standhill site, for the U.D.C. J. A. West, A.R.I.B.A., surveyor, Manor-road. Deposit £1 1s.

OCTOBER 20.—**Kerry**.—STATIONS.—Stations for the rda Siachana at Derreen, co. Kerry, and for the rda Siachana at Lough George ex-R.I.C. Barrack, co. Kerry, for the Commissioners of Public Works. J. J. O'Leary, Oifig Oibreach Publi (Office of Public Works), 11, Atha Cliath (Dublin). Deposit £1 each.

OCTOBER 20.—**Macclesfield**.—DWELLINGS.—Six houses at Chelford, on site alongside the road leading to Chelford at Alderley Edge; six houses at Snelson, site alongside the road leading from Chelford post to Peover; 22 houses at Sutton, on site along east of main road from Macclesfield to Leek, south of Chelford, for the R.D.C. Geo. Clayton, architect, 4, Kingston-street, Stockport.

OCTOBER 20.—**Roxburghshire**.—CONCRETE BRIDGE.—Erection of reinforced concrete bridges over the river Jed for the Roxburghshire County Road Board, Jedburgh District Committee, and Jedburgh Town Council. J. & A. Leslie & Reid, C.E., 72a, George-street, Edinburgh. Deposit £5.

OCTOBER 20.—**Sedgefield**.—PAINTING.—Painting and decoration of the Trimdon Grange Council Infants' School, for the Durham C.C. M. Anderson, District Engineer, District Education Office, 23, Dovecot-street, Merton-on-Tees.

OCTOBER 20.—**Sheffield**.—ALTERATIONS.—To the new home at the Firvale Hospital, Sheffield, to provide additional bedroom accommodation, for the B.G. E. Whitehead, architect, 34, Goddard Hall-road. Deposit £5 5s.

OCTOBER 20.—**Thurcroft**.—EXTENSIONS.—To the new school, for the West Riding E.C. The Education Department, County Hall, Wakefield.

OCTOBER 21.—**Chesterfield**.—CONVENIENCE.—Urinal heffield-road, in the Parish of Killmarsh, for the R.C. H. Taylor, engineer and surveyor.

OCTOBER 21.—**East Ellce**.—COTTAGES.—One pair of ages at Guanock-gate, and three pairs on the Union-bank, Sutton St. Edmund, for the R.D.C. Mossop, Jun., Clerk to the Council, Holbeach.

OCTOBER 21.—**Edinburgh**.—PAINTING.—Painter working hall at Craiglockhart Poorhouse, for the P.C. M. Mowat, Clerk, The Edinburgh Parish Council, members, Castle-terrace.

OCTOBER 21.—**Great Woking**.—HOUSES.—Twenty workmen's dwelling houses at Great Woking, the Rochford R.D.C. Mr. A. C. Madge, Surveyor for the Council, Rayleigh.

OCTOBER 21.—**Hove**.—PAINTING.—The external work and ironwork of the Hove Baths, King's Lane, for the T.C. Borough Surveyor.

OCTOBER 21.—**Inthwaite**.—HOUSES.—Twenty sculpture houses on the housing estate at Cowersley, for the U.D.C. J. Ainley, architect, 55, New-street, Ldersfield.

OCTOBER 21.—**Welwyn, Herts**.—HOUSES.—Erection of a further 38 houses on the London-road housing site, for the Welwyn R.D.C. H. G. Cherry, 7, Buckingham-street, Adelphi, W.C.2. Deposit £3 3s.

The City Corporation Town Improvement Committee are applying to the Ministry of Transport for £577,000 towards the cost of the proposed 80 ft. roadway from City-road to the Bridge.

BOOKS.

Roof Coverings. By ERNEST G. BLAKE, M.R.S.I. (London: Chapman & Hall, Ltd.) Price 10s. 6d. net.

The importance of a wise selection in the roof covering of any structure cannot be over-estimated, and the assistance given by Mr. Blake in this new book will be appreciated by those who read the details of the numerous types of roofing which are available for modern work. The author deals with every class of covering, from the picturesque old-fashioned thatch to the latest development in asbestos cement, and in each case the advantages, disadvantages, methods of application, and general particulars are given in a thorough manner, which indicates considerable care in the preparation of the contents. Many of the types are special ones supplied by various firms under trade names, and the notes on these are necessarily based to a large extent on the makers, catalogues and advertisements. The author classifies the different coverings under the main headings of (1) organic; (2) metallic; and (3) mineral; and each of these is divided into natural and manufactured, with the exception of the metallic type, which is obviously all manufactured. We can thoroughly recommend the book to architects and builders as a useful addition to the technical library.

A. L.

Kelly's Directory of the Building Trades, 1925. Published by Kelly's Directories, Ltd. Price 50s. net.

We have received a copy of the 1925 edition of Kelly's Directory of the Building Trades. This Directory embraces England, Scotland and Wales, and the principal towns in Ireland, the Channel Islands, and the Isle of Man. In addition to the names of upwards of 20,000 builders, it gives also the names of those engaged in the allied trades and professions, such as sanitary engineers, architects, surveyors, &c., and of manufacturers and suppliers of the various articles and materials used.

The book comprises:—1, the names for each county, arranged alphabetically under the towns and villages; 2, an alphabetical classification of trades for the London Postal District, with the names of those engaged in each trade arranged in alphabetical order; 3, a similar classification of trades for the rest of England, Scotland and Wales. There is also an extensive section giving in alphabetical order the names of branded articles and specialties used in the Trade, together with the names and addresses of the manufacturers; the importance of this section need not be emphasised as everyone concerned will realise its importance.

Although there are nearly 3,000 pages, this volume is so extremely well arranged that any name, town or article can be found with the minimum amount of trouble; no builder, architect or building materials manufacturer can afford to dispense with it.

French-English and English-French Dictionary of Technical Terms and Phrases. By T. O. KETTERIDGE, F.S.A.A., A.C.I.S. London: George Routledge & Sons, Ltd. Price 50s. net.

Mr. Ketteridge is to be congratulated upon the compilation of this monumental work, and Messrs. Routledge deserve all praise for their enterprise in publishing it. To civil, mechanical, electrical and mining engineers, and to all who are in any way concerned with the sciences and industries, this dictionary, with its translation of one hundred thousand words, terms and phrases, must be an invaluable work of reference. Building is well represented so far as we have checked the references. Architecture being an art, its own special terms are not, of course, exhaustively represented, but there is quite a useful sprinkling of them.

Browne, 19 garages, Dobell-road, Eltham; T. P. Blower, 24 houses, Pegwell-street, Plumstead; Stotesbury & Morris, 10 houses, Gerda-road, Eltham.

—The B.C. recommend that application be made to the M.H. for consent to the erection of 261 houses by direct labour.

MALTEBY.—The West Riding E.C. recommend that a Secondary School to accommodate 350 pupils be erected.—The West Riding C.C. recommend the proposed widening at the junction with the Rotherham and Barnby Moor main road, of the Bawtry and Tinsley-road, at a cost of £31,375.

MANSFIELD.—The E.C. has decided to apply for a loan for the building of a new central school at High Oakham, at a cost of £32,000. The B.E. has approved plans for the handicraft rooms and sanctioned an expenditure of £5,070 for furniture and equipment.

MIDDLETON-IN-WHARFEDALE.—The West Riding C.C. recommend that the accommodation for the staff at the Sanatorium be provided at an estimated cost of: Nurses' hostel, £14,610; medical superintendent's house, £2,867; eight houses of the parlour type, £8,351.—The C.C. also recommend that additional bath and w.c. accommodation be provided for "A," "B" and "C" blocks, in accordance with plans, at a cost of £2,723.

NEWCASTLE.—The Corporation Housing Committee has decided to purchase land for housing purposes near Morton-street, Byker.

NORMANTON.—The West Riding E.C. recommend that extensions be carried out to the Grammar School, at a cost not exceeding £20,000.

NORTHFLEET.—The U.D.C. has decided to invite tenders for the erection of 26 houses.—The Council are discussing with the A.P.C.M. matters in regard to the shore roads.

NOTTINGHAM.—The T.C. has decided that when the Red Lion-street area is cleared, no dwelling-houses shall be erected, the whole place to be devoted to commercial buildings.

OLDHAM.—The C.B. passed plans: H. Partington, 25 lock-up garages, heating chamber, at the rear of Manley-road.

OMAGH.—The U.D.C. has received sanction from the Ministry of Home Affairs approving the erection of ten houses at the Fair Green site, and sanctioned the borrowing of £5,000.

OXFORD.—The T.C. recommend the immediate development of land already purchased for houses on the Abingdon-road, and the City Engineer be instructed to prepare plans and estimates for houses of the "Easiform" type of construction.—The T.C. has recommended Mr. Castle to prepare plans for the proposed additional classroom in the girls' department of the South Oxford Council School, and have instructed the Secretary to forward the final plans to the B.E. for approval, together with the final plans (when ready) for the new Medical Clinic and Practical Instruction Centre on the site of 60, St. Aldate's.—The City Engineer reported that in future the Union-street yard only would be used as a depot for the East Ward, and that under the new arrangement it will be necessary to erect thereat an office, mess-room and store, at an estimated cost of £250.—The Council recommend that the existing convenience in St. Giles' be extended.—The Council also recommend that the City Engineer take over the Weirs-lane bridge as a public bridge, and rebuild it in concrete at an estimated cost of £150.—The Oxford C.C. are acquiring the site at 42, Castle-street for the extension of the County offices.

PONTEFRAC.—The E.C. has given notice of their intention to erect an elementary school on the Baghill housing estate.

RATHMINES.—The question of the erection of public baths has again been discussed by the Council, who decided that the surveyor be asked to submit a report on the question.

RAWMARSH.—The West Riding C.C. recommend that a site be purchased for the proposed New Middle School.

RAWTENSTALL.—The War Memorial Committee has decided in favour of a proposal for the provision of public baths, to cost about £10,000.

READING.—The C.B. resolved that application be made to the M.H. for approval to the Council affording financial assistance to private enterprise in the erection of a further 100 houses.

ROSSINGTON.—A cinema to be owned by miners is probably to be built at Rossington, near Doncaster. The scheme is to cost £8,000.

ROYSTON.—The M.H. has given approval to the erection of 16 additional houses on the Pond-street site. Plans have been submitted for the proposed sewage works.

SALFORD.—The C.B. propose to widen Eccles Old-road to 80 ft. from Broad-street to Waste-lane, at an estimated cost of £85,800.

SARFELD.—The members of the Grimsthorpe Wesleyan Reform Church are extending their Sunday school buildings, estimated to cost £2,500.—The

Rolling Shutters

The modern means of saving space

S.W.F. Rolling Shutters are in use in the finest buildings in the country—yet they are equally suited to the smallest structure. Every form of closure is benefited by their fitment. Security and space economy go hand in hand with convenience. Follow the lead of famous architects and specify S.W.F. Rolling Shutters on your plans.

Let us quote you for any required size of shutters—wood or steel laths.

RICHARD FORSYTH & CO. 121, St. Vincent Street, Glasgow

Corporation are contemplating building a large open-air swimming pool in Millhouses Park.

SHIPLEY.—The Surveyor is to prepare plans for conveniences at Northcliff playing fields. Another 100 houses are to be subsidised. Plans passed: 24 houses, Kendall-avenue, for A. Kendal & Sons; 23 houses, Norwood-avenue, for H. Chippindale.

SKELTON AND BROXTON (CLEVELAND).—The U.D.C. has approved plans submitted by the Cleveland Miners' Association for the erection of ten aged mine workers' cottage homes at Boosbeck.

SKIPTON.—The West Riding E.C. recommend extensions to the dining room at the Grammar School, at a cost of £400.

SMETHWICK.—The Housing Committee recommend that application be made for approval of the proposals for assisting private enterprise in respect of a further 100 houses and for sanction to the borrowing of £19,700 for the purpose. A tender for 202 houses on the Slatch House estate has been recommended for acceptance. The Committee recommended the erection of 482 houses in Queen's-road, Slatch House, Old Chapel and Warley-road sites during the next two years. It has been decided to erect a maternity home.

SOUTHWICK.—The U.D.C. has decided to erect another 44 houses on the Marley Potts estate.

STALYBRIDGE.—The E.C. are to recommend the T.C. to apply to the M.H. for permission to borrow the sum of £13,100 for the purpose of converting West Hill Mansion into a school for boys.

STAMFORD.—A scheme is being prepared for the erection of a new Corn Exchange with a first-class concert hall, at an estimated cost of £7,000. Plans are being prepared by F. J. Lenton, architect.

STOCKSBRIDGE.—The U.D.C. are being urged by the West Riding C.C. to provide an isolation hospital for the district.

STOKE AND WOLSTANTON.—Plans are to be prepared for the Stoke and Wolstanton B.G. in connection with the scheme to increase the hospital accommodation.

STRATFORD-ON-AVON.—The R.D.C. has appointed Mr. Boshier, of Bidford-on-Avon, as architect to their scheme of 20 houses.

SUNDERLAND.—The Corporation Building Committee has passed plans for the first section of the extensions to the Royal Infirmary.

SUTTON.—The U.D.C. decided that the 92 houses be wired for electric lighting, and instructed the Surveyor to obtain estimates for the work.

SUTTON COLDFIELD.—The Housing Committee recommended that application be made to the M.H. for sanction to borrow a further sum of £50,000 for housing purposes.

THOMASTOWN.—The extensions and improvements are to be made at a cost of £2,500 to Thomastown Public Elementary Schools, Portadown.

THORNE.—The West Riding C.C. recommend the construction of a new bridge to carry the Bawtry and Selby main road over the waterway of the Sheffield and South Yorkshire Navigation, at an estimated cost of £18,888. The C.C. also recommend the construction

of a steel swing bridge, at an estimated cost of £7,000, at Toll Bay.

THURNSCOE.—The West Riding E.C. recommend that a house be erected for the caretaker of the Thurnscoe new Council school, at a cost of not exceeding £500.

TYNEMOUTH.—Amended plans have been prepared for the extension of the Moorpark infectious diseases hospital, the M.H. having allowed the scheme to be proceeded with. The T.C. recommend that the Borough Surveyor be instructed to submit an amended scheme in connection with the following works: (1) Works to the east of the Bathing Pool of a sufficient character to defend the banks against the sea; (2) the erection of a retaining wall on the landward side of the Pool; (3) the provision of (a) stairs from Sharpness Point to the Pool, and (b) provision of dressing boxes and shelter; (c) conveniences for both sexes; and (d) a gas-heated drying closet, with the necessary boilers.

WALLSEND.—The T.C. has decided to apply to the M.H. for sanction to a loan of £12,000 for conversion of cell privies into the water carriage system.

WANDSWORTH.—The B.C. has received a letter from the M.H. saying he is prepared to sanction the borrowing of the sum of £36,500 for the provision of the public baths at Streatham. The Council recommend that tenders be invited for erecting and fitting up the new bath. The Council have had before them a scheme prepared by Mr. H. B. Elkington, A.R.B.A., for altering the coach house and outbuildings adjoining the Council's flats at 64, The Chase, and have given instructions for tenders to be invited for carrying out the alterations. Instructions have been given for tenders to be invited for external painting works to 24 houses in Buckhold-road on the Southfields housing estate. Plans passed: Belfrage, Saville & Hooper, 16 houses, Augustus-road, Southfield; R. H. Miller & Son, Ltd., 19 houses, Streatham Vale, 32 Abercain-road, 20 Cannmore-gardens, 22 Donnybrook-road, and 42 in Road No. 1 on the Streatham Vale estate, Streatham; Thomas & Westcott, 50 houses, Walrand-street, Streatham, and 15 Ribblesdale-road; W. J. Horsman, five houses, Chillerton-road, Streatham, and two Ramsdale-road; Wates, Ltd., (1) 12 houses, Streatham Vale, Streatham, (2) four shops, Streatham Vale, Streatham; H. S. Lee, Ltd., women's convenience, The Angel public-house, High-street, Roehampton; C. H. Lingfield, hall, a.c., at rear of Deerhurst Club and Institute, 2 and 4, Steerforth-street, Springfield.

WARRINGTON.—The T.C. has received sanction to borrow £30,000 for housing. The Borough Surveyor has been instructed to prepare plans for the erection of a smaller type of house on the Training College site, and the T.C. resolved that application be made for the approval of the M.H. to the granting of assistance in respect of an additional 130 houses. The Council resolved that application be made for the M.H. for sanction to borrow £2,738 in respect of the widening of Bruche Bridge, and the reconstruction of Manchester-road. Plans passed: Seven houses, Cumberland-street, for A. Wright; six houses, New-road, off Man-

chester-road, for A. Swinton; 14 semi-detached Queens-avenue, for J. Broadhurst; 22 semi-detached houses, New-street, off Wilderspool-causeway, 1 and A. Ashton.

WATSON-DEARNE.—The M.H. has approved scheme for the extensions to the Wath Wood Is. Hospital. A lay-out is being prepared of 20 a land in West Melton where the Council intend to build 250 houses. Sites have also been acquired at Sandgate and Wath Wood for the erection of a scheme is under consideration for the erection of a secondary school at Sandgate. Messrs. John, brewers, of Tadcaster, are negotiating for a site the Council's housing site where they propose a new hotel.

WEST MERSEA.—The Essex E.C. recommend installation of heating apparatus at the school, at an estimated cost of £167.

WEST RIDING.—The C.C. recommend that light be installed at the Mitchell Memorial at an estimated cost of £300.

WREYMOUTH.—The T.C. has received from the approval for the erection of 44 parlour type houses on the Westham housing site. The Minister has given formal sanction to the borrowing of £23,297 for the erection of the houses.

WITFIELD.—The U.D.C. has resolved to tenders for the construction of a tramway shed underground conveniences in accordance with plans, a.c., submitted by the surveyor.

WIDAN.—The Miners' Welfare Fund Committee contributed £25,000 for the extensions to the and District Mining and Technical College.

WILES-EN.—The U.D.C. has received sanction from the M.H. to the borrowing of £1,670 for the erection of public baths at Disraeli-road. The Council recommend that the Clerk be authorised to apply to the M.H. for sanction to the raising of a loan, upon the Engineer's estimates, totalling £14,820, in respect of private street improvements under: Oxgate-gardens, £4,672; Herbert-gate, £2,746; Ellesmere-road, £2,967; Dewsbury, £1,432; Hanover-road, £2,853. The M.H. approved the Council's proposal to accept the of the Calway Construction Co., for the erection of 100 concrete houses on the Brentfield estate. A loan is to be made to the M.H. for sanction to the of a loan of £15,300 in connection with the widening of High-street, Harlesden. Plans: New ward to hospital, Harlesden-road, Willes Messrs. Newberry & Greenaway, for the of the Willesden General Hospital; twelve Liddell-gardens, Kensal-rise, by Messrs. Done, & Co., for Mr. R. H. Currier; block plan of new and roads, Whitby-avenue, Park Royal, by Walter Bridges & Co., for the Indestructible Co., Ltd.; eight houses, Mount Pleasant-road, Rise, for Messrs. F. Thornton & Co.

WOODHOUSE.—The West Riding E.C. recommend that additional classroom and cloakroom accommodation be provided at the Secondary School, at an estimated cost of £2,426.

"Elementary Guide to Reinforced Concrete."

'Elementary Guide to Reinforced Concrete'

By ALBERT LAKEMAN, L.R.I.B.A., M.I.Struct.E., etc.

Specially written for those who wish to gain a thorough knowledge of the principles of reinforced concrete design and construction. It is written on the assumption that the reader has no previous knowledge whatever of the subject. The accepted methods of design are lucidly explained in simple language, and made clear by comparison with everyday things in a manner readily understandable by the beginner. This book should be specially useful to Students, Clerks of Works, Foremen, and all who wish to gain a knowledge of reinforced concrete design and construction in the easiest way.

"The book is indeed most simply written, and I will bring it before my students."—A Professor of Architecture and Building.

Preserving the Amenities.

The proposed building of four red-brick houses by the Chard Rural District Council threatened to spoil the quiet charm of the stone-built village of Winsham, but Major G. F. Davies, M.P., of Leigh House, has undertaken to shoulder the burden of building the houses of the same material as the rest of the village.

Builders' Estates.

Mr. George Haigh, of Barnsley, builder and contractor, left (net personality, £1,012) £6,426.

Mr. Thomas Fuller, of Belle Vue, Doncaster, retired builder, left £7,728 (net personality, £1,677).

Mr. J. H. Weatherseed, builder, of Bohemia-road, St. Leonards-on-Sea, has left estate of the gross value of £15,126.

Mr. Isaac Robson, "Kirklands," Eaglescliffe, Durham, of Isaac Robson & Co., Ltd., engineers' and builders' merchants, Stockton-on-Tees, has left the net estate of £32,315.

Mr. Charles Almond, of Coalside, Southwick-on-Wear, engineer, has left the net estate of £16,864.

Mr. H. Cooper, plumber and decorator, of Swan-lane, Evesham, has left gross estate of £14,085.

Mr. W. Hawkins, builder, of Peterborough, has left net estate of £14,620.

Mr. A. K. Irving, builder, of Marlborough-road, Southampton, has left net estate of £5,603.

Mr. F. Marland, contractor, of Grenville-street, Ashton-under-Lyne, Lancs, has left gross estate of £20,903.

Obituary.

The death has taken place at Pantygwair, Cross Inn, of Mr. J. James, builder and contractor, in his 64th year.

The death has taken place of Mr. John William Vaughan, of Colwyn Bay, at the age of 85.

THE SCOTTISH BUILD

THE WEST HIGHLAND
SLATE INDUSTRYNEW BUILDINGS
SCOTLAND

A deputation representing the West Highland slate industry and Aberfoyle slate quarries recently waited on Captain Elliot, Parliamentary Under-Secretary for Health, and the Board of Health in the Board's offices, Edinburgh. Mr. McCowan, Mr. Lamb and Mr. McCulloch, on behalf of the deputation, made strong representations in favour of the use of Scottish slates on Scottish housing schemes. They recognised that the Board of Health had a duty to perform to the community to keep the cost of houses as low as possible. They urged, however, that the cheapest was often the dearest, and that, judged by the test of quality, there was no roof covering on the market to equal West Highland slates. They required less maintenance and even though their initial cost might be slightly higher than that of other roofing materials, this initial higher cost in a few years would be more than justified. The saving made by the use of cheaper material did not justify the closing down of the industry, the hardship which this imposed on the Highland communities, and the increased cost to the State and local authorities through the unemployment which would ensue.

Captain Elliot, in replying to the deputation, pointed out that the Board were expressly prohibited by Section 10 of the Housing Act, 1924, from imposing any condition, in approving housing schemes, which would prevent the materials required from being purchased in the cheapest market at home or abroad. The question raised others which certainly could not be decided by the Board. The Board, however, had great sympathy with the case put forward by the deputation, and had decided that, provided the all-in cost of houses for which tenders were submitted to them were such as they could approve, they would take no exception to the use of Scottish slates where these were asked for by local authorities and were included in the tenders.

Renfrew (Lower).—HOUSE.—Plans passed for the erection of a power station, Kilmacolm-road, Bridge-of-Weir, for Valley Electrical Power Co., Ltd., 53, street, Glasgow, per Mr. Donald, architect, Mansion House, Greenock.

Stanley.—HOUSES.—A site between Church and Perth-road has been obtained for the erection of three houses. The architects are Messrs. & Duncan, Perth.

Perth.—ACADEMY.—The Perthshire Council considering the question of acquiring Viewlands for the proposed new Academy.

Annan.—WATER SCHEME.—The Annan Waterworks Co. has agreed to spend £19,000 in capital connection with the Lower Annan scheme.

Renfrew.—BUILDING.—The Dean of Guild Court passed plans for the new Renfrew Housing Society. The new building of the High-street improvement scheme the estimated cost of the work is £22,000.

Glasgow.—POORHOUSE.—The District of Control has agreed, at the request of the Scottish Office, that plans for increased accommodation should be formulated and submitted to the General Board.

Edinburgh.—HOUSES.—The Housing Committee has recommended the Town Council to sanction the erection of 500 houses, new subsidy scheme recently outlined by the Prime Minister.

Airdrie.—HOUSES.—The Town Council decided to proceed with the erection of apartment cottages and 32 four-roomed houses. Messrs. John Scotland & Co. have been appointed architects. Offers have been accepted for 26 three-apartment cottages.

BUILDING TRADE WAGES IN SCOTLAND

TRADE NEWS

Messrs. G. H. Carter, Ltd., building contractors, have removed to Clissold Works, 57-69, Green-lanes, London, N. 16. Telephone: Clissold 6921.

We learn from Messrs. The Bath Arterraft, Ltd., Lower Bristol-road, Bath, that they supplied the furniture, fittings, screen work, and panelling for the offices, board room, &c., of the Eagle, Star and British Dominions Insurance Co.'s building recently completed in Threadneedle-street, E.C., and illustrated in our issue for October 2.

Petter Oil Engines.

We understand that the Petter Oil Engine exhibit at the recent Caldas da Rainha Exhibition at Lisbon was awarded another Gold Medal.

Pelumina Cement.

With the present shortage of skilled labour in the building trades, coupled with the higher rates of pay and shorter hours worked, it is doubly essential that no time should be wasted in the execution of a contract. Hitherto waste of time has been unavoidable with a slow-maturing and hardening cement, but there is now on the market a quick-drying cement at a price very little above that of ordinary cement. Its name is Pelumina, a compound of "Pelican" and "Alumina," and it is a new product of Messrs. G. & T. Earle, Ltd., who have issued a brochure containing several graphs illustrating some comparative tests. When the test results of Pelumina are compared with the British Standard Specification requirements, it is seen that this cement attains a strength in 24 hours which fulfils these requirements at seven days. Piles constructed with Pelumina have been driven in eight days, as against the 28 days required by ordinary cement, and shuttering can be struck safely within 48 hours after placing the concrete.

Allen-Liversidge, Ltd.

Messrs. Allen-Liversidge, Ltd., are showing at Stand No. 171, Olympia, the E.C.L. cast aluminium (electric and acetylene) for commercial vehicles and the patent "self-contained" lamp, in which lamp and generator are conveniently combined in one unit. Both the E.C.L. and their own A-L lamps are suitable for use with either a generator or dissolved acetylene in cylinders. A-L "Dual-purpose" head-lamps, also on view, are designed so that each is suitable for either electric or acetylene lighting, and with the A-L Focus Head-light Attachment, whereby complete control of the focus of the lamps is maintained by the driver from his seat at the wheel. The makers claim that this device is a thoroughly practical solution of the dazzle problem, and that it is also of great use in fog. Its effect will be demonstrated on the stand.

The Truscon Floor.

The Trussed Concrete Co. claim to have combined the economy, lightness and sound-proof qualities of a timber joist floor with the strength and fireproof qualities of a solid concrete floor by reproducing the timber floor in reinforced concrete. The difference in cost is slight, but a great saving is realised in the extra life of the concrete floor and the capitalised value of the reduction of insurance premiums. The Truscon floor is not only extremely strong itself, but it imparts its strength to the entire framework of the building, because it is cast at the same time and in one piece with either the concrete casing to the steel beams or the reinforced concrete, or on the wall in the case of brick buildings. The makers claim that it is quickly and easily constructed, and affords flat ceilings of long span. These numerous merits of the Truscon hollow floor are proven by the list of buildings in which they are being used, which includes such important works as Adelaide House, Devonshire House, Messrs. Cook's new premises in Berkeley-street, and the new India Building at Liverpool. Particulars may be obtained on application to the head offices at 22, Cranley-gardens, S.W.7.

TENDERS

OCTOBER 23, 1925

THE CHURCH CONGRESS AND THE ARTS AND CRAFTS

STRANGER visiting for the first time the Exhibitions of the Church Congress would be extremely impressed in all probability with sharply contrasting activities of the two sections. On the one hand, the remarkable number of societies for the helping of all kinds and people—nearly all very individual and personal—all very excellent work, each in its own way; and, on the other hand, an extremely different activity, illustrating an aspect of the past, as now yearly seen in the remarkable Loan Exhibition of Church Plate and other treasures of a similar kind. These wondrous objects of centuries ago tell of the generosity of the donors and the skill of the craftsmen of the periods shown. It is admitted on all hands that work of the past, by being so delightfully shown and handled, is helpful to all—particularly in promoting the spirit of appreciation of these priceless treasures of our churches and the necessity for handing down to future generations all of that which has been made. By these annual displays much is being recognised and recorded that perhaps otherwise would be forgotten and easily neglected and lost.

What of our present-day activities in regard to the arts and crafts, and those particularly connected with the work of cathedrals and churches? What of the works of our painters, sculptors, gold and silver smiths, jewellers, needleworkers, scribes and illuminators? What do they take, either collectively or individually, of this great week of the Church's activities? How do they appear before anxious and appreciative clergy and laymen? "What of their hands?" What can be found in these exhibitions that will be in any way a help to them? Very little, it must be confessed. The names of those craftsmen doing really "passable" work this year are not many. Last year, at Oxford, it was better, and the Church Crafts League held an exhibition of the work of their members—textiles, hangings, metal work, glass, and finely written and illuminated manuscripts were shown, as well as drawings and models of architects' work. This year the chance has been, unfortunately, missed—and it is a very great loss.

What of architecture? Not one architect either shows his work or a photograph of his work! When it is remembered that activities are always taking place in nearly all our churches—there must be few without some scheme or schemes of repairs or improvements—and the great number of new churches and other buildings in connection with them always erected, it seems incredible that nothing has been done—nothing made to arouse some interest in this great craft! By this attitude could very soon be amended and a real opportunity made to grasp such an excellent opportunity of bringing clergy and laymen and the artist and craftsmen in closer contact. Our special correspondent in our last issue suggested a remedy. The plan proposed can be very greatly extended and in one very important and particular direction. Could not the Royal Institute of British Architects do this way? The success of their recent visits to the centres of the provincial societies has been very great. They have greatly stimulated the local interest in the art of architecture; Oxford, Newcastle, Cardiff are some centres where their influence has been greatly felt.

Could they not help in a similar way with the Congress? It could be worked through the local society governing the district in which the Congress is held, and the R.I.B.A. should be responsible for arranging it. They should gather together the church work of the local architects and craftsmen, and they could gather a collection perhaps from the closing Royal Academy—a typical selection of church work. Then the Church Crafts League could be responsible for the various Guilds of Craftsmen, and so a very well organised exhibition of fine modern work could be shown that would in time have a great influence on the new work being placed in our cathedrals and churches, now so very often ill-considered.

After all, it is the architect who must show the way. The painter and sculptor look to him for his opportunity, which has been so very often neglected. In regard to painting, when one thinks of the splendid work of the pre-Raphaelites, how sadly the opportunity was neglected by the architects of the time! Surely very special places should have been designed for such splendid paintings in the churches being built at the time.

Millais, Holman Hunt, Ford Madox Brown—commissioned to create great things—should all have painted for these new churches. How very fine the two paintings of G. F. Watts look in St. Paul's! And how much out of place these splendid pictures look in the ordinary art gallery! Yet nothing was done, and these great men tired and turned away to other channels for their inspiration. How rarely are the positions of the Stations of the Cross considered and how rarely well placed. The Cathedral at Westminster is an exception, and the sculptor had a well-set panel given him. Had it been on a splayed pier, perhaps it would have been better still. But most of these positions are ill-chosen.

It is at such a gathering as this great annual Congress that those interested in all the arts and crafts so essential to the Church should gather, with their actual work and their ideas, and then freely discussing among themselves, they should be able to inspire confidence in others and so create a great interest in all who desire to learn about and attempt to appreciate their work.

Surely, for the Institute and the provincial societies affiliated to it, to take a lead in such a movement is a duty they should not lightly set aside. The influence for good would be enormous. There are two other bodies that might quite well be associated with this annual meeting. One is the Society for the Protection of Ancient Buildings, for the Congress seems a most fitting place for propaganda for the proper repair and care of our cathedrals and churches. Lectures and addresses should be given and printed advice freely circulated, and then, the Society, the local Advisory Diocesan Committee, aided by the central body, could urge upon the local clergy the importance of doing nothing to a church or place anything whatever within it without capable advice, given through the Advisory Committee. A very great step would have been taken in this way to protect what still exists of the beauty of our churches.

At Southport next year the first opportunity would occur. It is the centre of a very active and wealthy population. Could not these ideas to stimulate and encourage an appreciation of our great arts and crafts be attempted, if only in a small way at first?

NOTES.

**Spoiling
Good
Buildings.**

THE removal of the steps in front of St. Martin-in-the-Fields, where they are supposed to impede traffic to and from Trafalgar-square, has been revived as a possibility again. We are disappointed that we should receive a word in favour of such a proposal from a correspondent whom we should have thought would not have been ignorant of the verdict passed on it by the Institute Art Committee some years ago. This Committee came to the conclusion that the removal of the steps would be an injury to the appearance of the portico, and would not be justified by the supposed benefit to traffic. Our correspondent says, "except for giving scale to a building, of what value is a flight of steps for architectural effect?" Is giving scale to a building nothing of consequence, then? How many modern buildings have this vital quality of scale? Only the other day we noted a tiny building in a street of a provincial town which was the most distinguished building in the whole thoroughfare owing to this quality of scale, and yet some people seem to think that the higher qualities of architecture are denied to cottages and small buildings. We call to mind an architect who built up a successful commercial practice having said that anyone could design a

house or cottage. Unfortunately, we saw he could not do it himself with any architectural charm. Well does a writer in the *Evening Standard* say the portico (of St. Martin's) is one of the most beautiful things we have, and that every good Londoner would defend St. Martin's by force if necessary.

**Inspiration
and
Guidance.**

AN indication of our whereabouts to-day in the practice of architecture may perhaps be gathered from the remark in a recent lecture that the architects of the present and the future would go for guidance and inspiration to—Cheltenham! A correspondent says that we can advocate the charms of country life without insulting the intelligence of the profession. We believe, however, the students of our best architectural schools will discover that there is a certain value in quietude and simplicity without finding it needful to seek inspiration at Cheltenham.

**The Royal
Artillery
Memorial.**

IT does not appear to us that criticisms of this memorial should be concerned only with the dispute between modernism and tradition, as we often mean very little by either of these terms. The field of dispute is not covered by the choice between these two, but extends to what is desirable in

such a memorial, and then the extent of the difficulty appears. war memorials are oftener mer than works of art, as is the 9-in. ho surmounting the Artillery War Memorial. We find a correspondent approving a memorial because it revives in his associations of "the stinking, shi slush of dawn," and is a lasting m of "horrible, bloody war," and h that his comrades would ask for n else. Thus the military mind is seen be artistic, nor is war in the mi some an inspiration to the cr imagination. But the failure o memorials lies chiefly in the fact th subject matter is inspired by o rather than artists, and their se what is suitable hardly include perception of the nature of art. artists have more direct say in the which such memorials should ta shall find that they contain "les the merit of a child's wooden locom

**War
Memorials
Exhibition.**

WE are informed th Trustees of the Imperial War Museum, South sington, propose hold exhibition of war memorial mode photographs, including the original of the Imperial Memorial Table French Cathedrals, executed by Reginald Hallward in collaboration Col. P. Cart de Lafontaine, on th anniversary of the Armistice, a they have already received ove photographs of memorials, and promise of many sketch models. suggested that architects who have concerned in the erection of war men might present to the Museum for p nent record, or lend a small framed graph of the particular memorial ori rials for which they have been respo. though, in order to avoid duplic architects interested should first communicate with the Museum in that they may be informed whet not the Museum already possess a r As the exhibition is to be open November 11, exhibits should read Museum not later than the 31st

**Examina-
tions and
Experience.**

IT may be remembere the Royal Institut British Architects advanced students of tecture to forego sitting for the Examination for admission as Ass on completion of certain qualific amongst these being twelve m experience in an architect's office the fourth and fifth years of the course. The Council of the In have decided to establish at their two registers, one of advanced stud recognised schools, and the other of tects willing to take such students t prescribed period. The Council that general use will be made registers, both by students and by tects; and we trust that the hope be fulfilled. Much study is essent

light: Detail of Heads.
By Miss Dowson.

wish to become successful archi-
d examination, provided that it
t encourage "cramming," is
the best preliminary test that
devised. But experience is
ble in training and furnishes in
run the only test of efficiency.

SEVERAL visits to the exhi-
d bition in Paris of Modern
ry. Decorative and Industrial
Art convinces us of the value
quality of tradition retained—
usly, no doubt—in many of
ish exhibits. We are inclined
measure back the steps we have
icism of English work, when it
juxtaposition with Continental
d it seems to us that the
of "new art" is very mis-
Design, or any other application
ates itself to the good of any
t, though adding its own per-
tribution, and such a provision
shall not show any traces of
ods is very theoretic and pro-
chievous. This is not to say
ality in design is undesirable,
more likely to reap the benefit
ourselves and growing on our
than in reaping the assumed
of progressive Continental
nts, which we confess to think
er artistry than our own.

WE confess to finding some-
t thing a little disagreeable in
the very term "new art,"
more particularly when we
hat it so often stands for.
seen some discussion recently

as to whether British manufacturers
were sufficiently in touch with "the
marked advance made by Continental
countries." We have visited Paris with-
out deriving the sense that we shall do
better in surrendering to Continental
influences than in building on our own
traditions. The Paris Exhibition authori-
ties laid it down that anything sent in
which included even traces of older
periods would not be considered as
coming within the scope of the exhibition.
This seems to us not only an impossible,
but a very undesirable condition. In the
first place, we are all influenced, un-
consciously or not, by what has come
down to us, and we doubt the possibility
of wholly diverting design from such
influences. Moreover, we do not consider
that the attempt to do so has been
attended with any such success that we
should follow in the same direction.

Paying Our Way.

In these days, when we
seem principally to be
engaged in disputing how
the profits on industry are
to be divided (when there are any) and
how industry is to be maintained at the
same time that that artificial level, "the
standard of living," is to be upheld, we
are too apt to become concentrated upon
what may be termed "local conditions"
as contrasted with our position in the
world, and may soon find ourselves to
have been living in a "fool's paradise."
If a larger view could be taken of our
industrial position in the world by all
concerned it might assist in the settlement
of our internal and eternal squabbles, and

therefore such figures as were recently
given by Lord Hunsdon in connection
with our Empire trade should be published
and emphasised as explaining the really
critical position we stand in. He said
that there were forty-three million people
in Britain who were dependent on
external resources for 75 per cent. of their
breadstuff, 60 per cent. of their meat, the
whole of their cotton, and 90 per cent. of
their wool. These things have to be paid
for by our overseas sales, and these
showed a reduction of 24½ per cent. com-
pared with 1913. These figures are
instructive, for it must be apparent to
everyone that we cannot obtain these
necessaries by simply exporting money,
but that to pay our way they must be
paid for by what we ourselves produce and
export. If these simple but hard facts
were present to the disputants in every
trade dispute surely a more reasonable
and co-operative spirit in furthering the
advance of our trade would be
exhibited.

THE private view of the
Royal Institute of Painters
in Oil Colours last week was
attended by so many that

Pictures.

the galleries were almost crowded. We
saw little to create much interest for those
who fix some reasonably high standard
on what they can admire, but we found
two or three unfamiliar names attached
to landscapes of some genuine charm.
We are confronted with an ever-increasing
output of pictorial art, but our greatest
success at present is probably amongst
picture posters.

The Liberal Jewish Synagogue, St. John's Wood, London.
MESSRS. JOSEPH, Architects.

GENERAL NEWS

Change of Address.

Mr. Herbert Kenchington, A.R.I.B.A., has removed his London office to 44, Bedford-row, W.C.1. Telephone, Chancery 7174.

Mr. Gerald Shenstone, A.R.I.B.A., has moved his office to 38, Bedford-place, W.C.1, at which address he would be glad to receive new trade catalogues. Telephone, Museum 3621.

Messrs. Broad, Babbs & Dockerill, F.F.S.I., have removed from 2, Oxford-road, Bournemouth, to Lloyds Bank Chambers, Lansdowne, Bournemouth, and would be pleased to receive samples and recent catalogues.

Housing at Tottenham : An Appointment.

Mr. E. C. P. Monson, F.R.I.B.A., F.S.I., of Finsbury-pavement House, 120, Moorgate, London, E.C.2, has been appointed architect for the remaining part of the Tottenham housing scheme. There are about 250 to 300 houses still to be erected.

The Roman Theatre of Verona.

We reproduce upon this and page 591 two interesting views of the Roman Theatre of Verona, which has been lately excavated under the direction of Professor G. Avena, director of the local art gallery. An article on the subject, by Countess Lisa Scopoli, appears in the October issue of *Architecture*, together with some further illustrations.

The Architectural Association.

The annual exhibition of Members' Holiday Sketches and Photographs will remain open until November 30.

This year's A.A. Pantomime will be performed in the Galleries of the Royal Institute of British Architects, 9, Conduit-street, W.1, at 8 p.m., on Wednesday, Thursday, Friday, and Saturday, December 16, 17, 18 and 19, and there will be a matinee on Thursday, at 2.30 p.m. Applications for tickets (3s., 5s. 9d., 8s. 6d., including tax), should be made by letter, or personally to Miss M. Hodson, 34, Bedford-square, W.C.1, or by telephone, Museum 4957. The profits will be in aid of the Architects' Benevolent Fund.

The New Waterloo Bridge.

The London County Council propose to insure the temporary Waterloo Bridge for £150,000.

We understand that Sir Edwin Lutyens, in the report which he was asked to submit to the L.C.C. upon the defective Waterloo Bridge, condemns any alteration to the existing bridge, and sets out his belief that "no matter what

the Council's decision might be, Waterloo Bridge to be maintained must eventually be rebuilt."

The Queen's Dolls' House.

The Queen's Dolls' House, which is now permanently housed at Windsor Castle, will be closed at the end of this month to allow the artists who are carrying out new features to begin their work. The house will not be reopened to the public until the spring.

Rome Scholarship in Sculpture.

Mr. Emile Jacot, of Birmingham, on the recommendation of the Faculty of Sculpture of the British School at Rome, has been awarded by the Commissioners for the Exhibition of 1851 the Rome Scholarship in Sculpture (1925). He studied at the Slade School of Art from 1919 to 1922.

House of Lords Acoustics.

The Marconiphone Company has been informed by the Office of Works that the recent amplifying experiments carried out in the House of Lords had proved entirely successful, and that negotiations had been completed for the installation of microphones and earpieces before the next sitting.

Prints of Nineteenth-Century London.

The L.C.C. has arranged for selections from the prints and drawings of London in its possession to be exhibited in one of the rooms at the County Hall, and this room is included in the itinerary for visitors to the building. A new selection of prints, illustrative of Early Nineteenth-Century London, is now on exhibition. The general public are admitted on Saturdays and Bank Holidays.

Lincoln Cathedral Repairs.

At a meeting of the Executive of the Publicity Committee of the Lincoln Cathedral Repairs Fund, at Lincoln, a report approved by Sir Francis Fox was presented. The work is proceeding, but £20,000 is still required; £54,000 has been spent so far.

Historic Inn Sold.

The Old Boar's Head Hotel, in Withy-grove, Manchester, a seventeenth-century coaching house, is to be demolished and a bank built on the site.

Proposed Hotel in Dublin.

Messrs. Mitchell, caterers, propose to build a £100,000 hotel in Grafton-street, Dublin.

Walthamstow Hospital.

Walthamstow General Hospital is appealing for £40,000 for the erection of new wards, an out-patient department, and other extensions

COMPETITION NEWS

Manchester Town Hall Extension Scheme. Manchester Town Hall Extension Committee has decided to ask the President of the R.I.B.A. to nominate assessors for the competition for the best utilisation of the extension site between Lloyd-street and Peter-street.

Public Baths and Washhouses, Whitegate. Chadderton Council proposes to design for new public baths and wash-houses to be erected at Whitegate. Premiums of £50, £25, and £10 will be offered. The R.I.B.A. has been asked to nominate an assessor.

Topsham Public Hall Competition. The promoters of this competition decided to amend the conditions in accordance with the R.I.B.A. regulations, and have the President to appoint an assessor.

Coventry and Warwickshire Hospitals Proposed New Ward Block.

The promoters of this competition decided to revise the conditions, the President of the R.I.B.A. has appointed Mr. Bateman, F.R.I.B.A. as assessor.

Competitions Open.

	Particulars published in "Builder."	
Newcastle Fire and Police Station. Premiums: £500, £300, £100. Mr. P. S. Worthington, F.R.I.B.A., Assessor.	—	June 12 ..
Town Hall, &c., Pretoria. Open to architects residing in South Africa or Registered under Architects' Act, of 1909, Transvaal. Assessor to be appointed by R.I.B.A. Premiums: £250, £150, £100.	—	— ..
Argentine Institute. Premiums 10,000, 6,000, 4,000, 3,000, 2,000 gold pesos. Apply parties., 35, Old Queen-street, S.W.1 ..	—	April 24 ..
New Buildings for Liverpool College, Mossley Hill. Sir Giles Gilbert Scott, R.A., Assessor. Premiums: £500, £300 and £200. Apply to J. H. Lintern, Secretary, Liverpool College, Sefton Park-road, Liverpool ..	—	Aug 7 ..
Australian War Memorial, Canberra. Open to architects of Australian birth. Apply High Commissioner, Australia House, Strand, London ..	—	Aug. 14 ..
Plan for construction of Conference Hall, for League of Nations, Geneva. International Competition, Sir John Burnet being British representative on Jury of Assessors. 100,000 Swiss francs to be divided among architects submitting best plans. Programmes will be deposited in due course with R.I.B.A., 9, Conduit-street, where intending competitors should apply. Single copies from Secretary-General, League of Nations, Geneva, on payment of 20 Swiss francs. ..	—	Jan. 2 ..

*Portstewart Golf Club	—	—
*Carnegie Hall, Dingwall	—	—
*Fleetwood Hospital	—	—
*Parish Hall, Braunton	—	—
Art Gallery and Museum, Birkenhead. Limited to competitors practising within 20 miles of Birkenhead since January 1, 1923. Premiums: £250, £175, £100. Sir Robert Lorimer, A.R.A., assessor. £25s. deposit. Apply Curator, Central Public Library, Birkenhead	—	Oct. 16 ..
Model Dwellings, Russia	—	Sept. 4 ..
* Competitions when "warned" or voted by the are starred.

Additions and Alterations to the Late Lord Leverhulme's Bungalow at Rivington,
MR. R. HERMON CROOK, F.R.I.B.A., Architect.

CORRESPONDENCE

The Association of Architects and Surveyors.

SIR,—The attention of the R.I.B.A. Registration Committee has been called to the recent establishment of an Association of Architects and Surveyors which is inviting architects to apply for membership as a protection against the "danger of being prevented from earning their livelihood" as a result of impending legislation.

So far as the R.I.B.A. is concerned the suggested danger does not exist. It has never been the intention of the Registration Committee to propose legislation which will in any way affect the livelihood of anyone who at the time of the passing of the Act is making his living by the practice of architecture. The interests of all those who are now connected with the profession will be specifically safeguarded. It has never been our intention to limit the benefits of a Registration Act to those who are now members of the R.I.B.A., or its Allied Societies, and the Bill which has just been drafted by the Registration Committee is perfectly clear on this point.

HARRY BARNES.

Chairman of the R.I.B.A.
Registration Committee.

Tendering.

SIR,—Having read with interest your correspondent's letter on this subject in your issue of October 16, while quite in agreement with his remark that it is discourteous on the part of authorities who receive tenders not to make known the results at least to the builders who have forwarded tenders to them, I cannot agree that the greatest factor in reducing the cost of housing is the competition amongst small builders. I am of opinion this argument would have been much stronger had "small" been omitted.

Your correspondent seems also to be under the impression that he and the friend to whom he refers are in a position to judge the whole organisation of their competitors. He talks of overhead charges. Probably the firms to which he refers as having heavy overhead charges have double the number of his supervising staff, but employ a greater number of hands than he does. If this is so, the overhead charges are no greater than his, as undoubtedly their organisation is superior. The writer has in mind an instance where a "small" builder talked to a client of the overhead charges of a building contractor, and when facts were discussed it was found that the building contractor employed approximately twenty men to one of his organising staff, whereas the small builder could not muster a better ratio than six to one.

In conclusion, the writer's opinion is that there are many ways whereby to-day's building costs could be lowered without affecting the rates of pay or even awaiting a fall in the cost of materials. Some may ask how. I must ask, however, to be excused a reply, as anyone having connection with the organisation of the building trade proper or its allied professions should be aware of the answer.

"BUILDING CONTRACTOR."

Building Trade Friction.

SIR,—Referring to the article entitled "Building Trade Friction," which appears on page 540 of your issue of October 9, I am directed to say that the statement therein to the effect that the cause of the resignation of the chairman and other members of the Negotiating Committee was the refusal of the National Federation of Building Trades Employers to ratify the agreement recommended for ratification is incorrect. The representatives of the National Federation referred to were in agreement with the decision not to ratify the revised consti-

tution unless all the craft unions of the Building Trades Operatives were signatories, and has been the consistent attitude of the National Federation towards this question.

A. G. WHITE,
General Secretary.

Hollow Floors and Roofs.

A letter from Mr. G. Topham Forrest, intending Architect to the L.C.C., setting particulars of hollow floors and roofs approved by the County Council as fire-resisting under the London Building Acts, is given on page 541.

Proposed New Parish Church, Frinton-on-Sea.

Last week we published a design, prepared by Sir Banister Fletcher, F.R.I.B.A., in invitation, for a parish church on a site at Frinton-on-Sea, to be carried out in brick and stone, in character with East Anglian traditions. It is planned on modern lines, a broad nave, to seat nearly 600 persons, flanked by narrow "gangway" aisles. The church has a semi-octagonal apse, vestries, and a chapel seating 30, with separate entrance on the south side. This chapel also forms a convenient return way for communions. Externally the nave clerestory is connected by the concave sweep of the buttresses to the aisle roof, which is carried out to the edge of the buttresses beneath. The west door gives entrance to a low-roofed vestibule, which is a broad west window of cinquecent lights in the fifteenth-century manner, divided into three sections by stout foliated mullions from which flying buttresses descend to the main buttresses below. Above this front gable with a cross worked in stone, flanking towers, which accommodate staircases to the baptistry internally, are of flint, rounded angles, and are surmounted by shingled parapets and shingled spires. Over the main arch is a bell-turret with bracketed pinnacles and roof and finial.

The Royal Artillery War Memorial, Hyde Park Corner, London.

MR. C. S. JAGGER, Sculptor. Base by MR. LIONEL PEARSON.

THE ART SCHOOL AND ARCHITECTURE

By D. N. MARTIN-KAYE, A.R.I.B.A.

THE recent volume of essays "The Touchstone of Architecture," by Sir Reginald Blomfield, and the occasional reference to the teaching of architecture in Schools of Art contained therein, lead one to wonder why it is that the status of the art school as a training ground for the future architect are so persistently ignored. It is hardly an important town in the kingdom where some sort of training in art is not given, and many of them contain spacious schools of art, and yet it is only in very few instances anything approaching comprehensive training in architecture is given. These can only be counted on one's fingers, and it is only too obvious that whilst we are bemoaning on the one hand the notorious bad taste and ignorance of the public in matters architectural, and on the other, the profession, ignore the great opportunity offered for propaganda and efficient training in architecture in many art schools. Those who remember the state of architectural education a decade or so back cannot but be amazed by the enormous strides made in this direction, in which the Board of Architectural Education and the now defunct Society of Architects have played so important a part. We are, however, falling into danger of a policy of exclusiveness, savouring suspiciously of selfishness. Having set in motion some movement "Schools of Architecture," we are still further and encasing them in a water-tight compartment called "recognition." To art schools are admitted the elite, the flower of university products, and possibly the dilettanti, and the armour of "recognition" is doled out very sparingly. The Board of Architectural Education. External provisions are made (the word itself may be best understood by the University of London simile, "Internal and External Examinations") and the privileges granted to the art school, and the conscious and subconscious benefits those schools receive, are out of proper proportion to be considered fair and equitable.

One who has the best interests of the profession at heart would wish to grumble at the position of those schools, but what one could do for is a wider policy adopted in training the country generally. It must not be forgotten that in the average art school is produced, amongst others, the amateur artist and the client of the future. In order to understand this dictum let us explore the ground a bit further. The training given in schools of art is apparently to equip would-be artists, painters and other craftsmen with a sound technical knowledge of their craft. It is outside the scope of this article to determine whether they succeed or not in this purpose, but should be borne in mind that a considerable number of students who attend schools of art become potential masters of their craft, and off, as they do, into other callings of life. Those who do succeed, adopt pursuits in art and are all subservient to the Art of Architecture and yet their ignorance of the elemental principles of architectural design is appalling. One would not perhaps find them a knowledge of the various styles, the Classical and Mediaeval mouldings and ornament, &c., but their application and the uses of architectural composition are not understood by these students, and yet it is on this knowledge of these last, that any real or appreciation of modern-day architecture is based. This alone places the teaching of architecture in an art school at a discount, and criticism. Further, more often than an important subject is dovetailed into the curriculum as a necessary nuisance to comply with the syllabus of the Board of Education. In art and is taught by a member of staff whose real legitimate province of work is metalwork or etching, &c., and for an hour a week as possible. Very rarely does one see an advertisement for a Master in

Architecture and Architectural Design, still less for a full-time employment. More often such an advertisement asks for a lecturer in building construction on a basis of two or three evenings a week. The responsibility for this lies at no particular door; it is simply a result of indifference, and lack of interest, a disregard for the necessity of good architecture as a public

The Roman Theatre of Verona: A Glimpse of the City from High Windows. (See p. 588.)

asset. Instead of being compulsory for all students, as in the Royal College of Art, it is relegated to a minor position in the average school. There are classes for painting and decorating, sculpture, and modelling, commercial design, poster work, &c., to which students can proceed direct upon entrance to the school, provided they possess sufficient aptitude for drawing, but little regard is given to *ensemble*. At what value can one assess a proficiency as a painter or decorator, if the student is ignorant of architectural settings? There surely is something more profound than a practical efficiency and knowledge of paints, varnishes, graining and marbling, &c., and the same applies to the other crafts in varying degree. In the study of these various crafts there is a lack of cohesion in the curricula of these schools and the student is often encouraged too soon to pursue his own particular bent before having mastered the psychological and general æsthetic value of art bearing on all problems connected with it.

It cannot be wondered at that the architectural training received at the smaller Schools of Art is viewed askance by the profession and, perhaps by the Board of Education. This is indeed regrettable, as with all due respect to other crafts such as metal work, etching, sculpture, and decorative art, the present day has relegated the enjoyment and employment of these arts to the connoisseur and the wealthy, and yet one and all, from the wealthy to the humblest of us, need the gifts and enlightenment that good architecture can give us. Further, in these days when the demand is perhaps more for the efficiently practical than the æsthetic, it is a pity that the former cannot be endowed with the stamp of the latter.

Furthermore, it has given rise to a certain amount of squeamishness on the part of the professional graduates, who shrink from the teaching sphere and from openings in these schools, partly on the score of the supposed loss of professional dignity in being a teacher, and partly on the score of the remuneration offered, to say nothing of the embargo imposed in many cases on private practice.

Space does not permit of a defence of the teaching profession, and if some distinctive and

wider policy were adopted by the Board of Architectural Education, together with the Board of Education, whereby an incentive was given for the employment of professional men in schools of art (those who have qualified as Associates R.I.B.A., a qualification quite recently recognised by the Board as of graduate standard) there is no reason why very different results could not be obtained and the educational programme of the profession considerably assisted. With the recent adoption of the revised Burnham scale of remuneration offered

to graduates, although it may be considered a miserable pittance by the professional man in practice, it holds out more security than that of the nomadic existence of the average assistant. The figures range from £240—£480 per annum, less 5 per cent. superannuation, with a pension.

Sir Reginald Blomfield so far back as 1912 in his lecture to the Art Masters' Society, gave it as his opinion that men who teach in Schools of Art should be allowed the opportunity of practising their arts, giving, for example, half their time to the school, and half to their private work, because only in this way can the teacher keep his art vital, and continue in touch with young and enthusiastic students. This recommendation speaks for itself, and yet how many local authorities will permit this? Very few, with most disastrous results to the efficiency of the teacher as such.

With a little adjustment and foresight, therefore, the Art School can be utilised for a good purpose, and seeing that we as a profession are realising the paramount importance of education and the provision of increased facilities for such, its possibility as a potential factor is worthy at least of consideration and a possible rapprochement with the State authorities.

If our professional educational outlook is narrow, the means for effective propaganda poor, we have only ourselves to blame if our hopes for a more cultivated public architectural taste prove barren.

Surveying from the Air.

It was stated at a recent meeting of the Royal Aeronautical Society that the cost of a survey could be reduced and the accuracy improved by using photographs taken from a height of 10,000 ft. It was estimated that a survey of the delta of the Irrawaddy, which had taken three months by this method, would have taken twenty years ordinarily.

Road Bridge over Forth.

A proposal to build a road bridge over the Forth, at Alloa, at an estimated cost of £255,000, is to be discussed by the Clackmannan County Council.

WOLVERHAMPTON OUT-PATIENTS' AND CASUALTY DEPARTMENT COMPETITION

THE awards in this competition are as follows:—

1st, Messrs. Elcock & Sutcliffe, Avenue House, 21, Northumberland-avenue, London.

2nd, Mr. W. Sydney Trent, 6, Broad-street-place, London.

3rd, Messrs. Cleland & Hayward, 5, Exchange-street, Wolverhampton.

The assessor, Mr. Thomas R. Milburn, F.R.I.B.A., in the course of his report, stated that in addition to the premiated designs there were several that were very excellent, notably Nos. 43, 12, 3, 13, 8, 30, and 1. He congratulated the Board upon the many very excellent designs received, and is of the opinion that almost every competitor presented a solution of a very difficult problem.

The architects of the winning design have placed the entrances from the existing court on the west side of the proposed out-patients' department, which gives the shortest length of exit corridor and most compact planning. The entrance for the casualty department and in-patients is placed to the east of the new out-patients' department leading to the courtyard on the south of the new out-patients' department, and at the eastern end of the main hospital corridor. The entrance and exit passage to the new out-patients' department is entirely separate and placed to the west of the new building. The whole of the ground floor of the existing out-patients' department has been cleared out, and the upper portion is supported by beams and stanchions, and a well-equipped casualty and dispensary department provided, utilising as much of the existing old walls as possible.

Accommodation Provided.

Men and women out-patients enter the waiting hall from the vestibule, in which are situated barriers controlled by a porter, whose office has accommodation for out-patient records with the necessary counters overlooking the barriers. From this vestibule access is gained to the men's and women's lavatories. The office for the almoner is situated at the

north-west corner of the new building, and a small ante-room is provided.

The isolation room is placed at the south-east corner of the proposed building, where it is off the exit corridor leading from all departments. It is also in close touch with the casualty entrance.

Staff toilets are provided for nurses and doctors at the south-east corner of the building with direct communication by the exit corridor to all departments.

In the Surgical Department two consulting rooms are placed side by side with examination cubicles opening from each consulting room. This department is kept to the north-east portion of the building so as to be in touch with the small operating room, recovery room and surgical dressing room.

In the Medical Department consulting rooms and examination cubicles are placed to the south-east of the new building, and are similar in arrangement to the Surgical Department.

The Ear, Nose and Throat Department is provided on the north side of the new building with examination stalls on each side opening out of the dark room, two of the examination stalls being arranged so that they can be entirely darkened.

The Dental Department is placed to the south of the out-patients' departments' waiting hall, and both rooms are top lighted from the north.

Another Department which may be used for purposes to be decided later on has been placed on the south side of the building within direct reach of the out-patients' waiting hall and communicating with all other departments. This department might become a future electrical treatment room or rooms, and has easy access from the main hospital corridor so that the in-patients may use it.

The V.D. Department has been placed on the lower ground floor, and is well lighted, as the whole of the main ground floor is kept at the same level as the old out-patients' department. The men are placed on the east side of

the building, and the women on the north side, with consulting rooms between the two giving easy access for both sexes. The entrances for men and women are placed on the entrance passage for the casualty and out-patients so as to ensure privacy. Direct access for both men and women patients is obtained from the out-patients' waiting hall by a separate staircase which also allows for the admission of patients who might have passed through the general consulting rooms. The position of this staircase also ensures privacy. Suitable sanitary accommodation is provided.

The dispensary has been placed so as to give access for out-patients and in-patients to a small waiting hall for the latter is at the end of the dispensary, and a larger waiting hall for the out-patients is at the east end. An office is provided for the dispenser, with lavatory accommodation and a large well-lighted storeroom. A lift is provided in the basement, with stairs to the lift and stair.

The operation room is placed at the north-east corner of the building so as to be easily accessible from the surgical consulting room and from the Ear, Nose and Throat Department. Sterilising, anaesthetic, recovery and surgical dressing rooms are provided.

The Ultra Violet Rays Treatment room is on the south front of the new building, giving immediate access from the out-patients' department and also for the in-patients from the hospital.

On the first floor on the south side of the building quarters have been provided for the patient sisters, giving one sitting room, one bedroom, one bathroom with w.c. accommodation for the sister with three spare beds for additional nursing staff.

The Casualty Department has been placed in the present out-patient block under the existing Children's Ward. The casualty patients are kept distinct from the in-patients, but all come under the supervision of the porter's office, which is situated adjacent to the covered ambulance entrance.

In conformity with the suggestions of the conditions a simple but dignified treatment has been shown on the elevations, narrow windows with wide joints being used on the elevations with bands of artificial Portland stone. The floors and ceilings are of fire-resisting construction. The flat roof will be formed of hollow tile tubes which will have a non-combustible layer of broken brick with a screed of cement, on which will be placed two layers of asphalt, making a thoroughly weatherproof and non-conducting roof. All internal walls will be furnished with Keene's cement, enamel. The floor finishings will be in terrazzo or position or granolithic flooring, as the various rooms may require. All corners will be rounded and the doors will be hardwood finished. All windows will have metal frames with suitable glazing.

Heating will be by low pressure hot water radiators connected to the mains in the basement. Ventilation will be by mechanical methods, assisted by fans in the waiting hall and in the larger rooms. Ducts for the supply of fresh air are brought in under the ground floor, and led up to emit into the rooms with extract ventilators at the level. The building will be fitted for electric light, with suitable connections for electric apparatus.

The approximate price for the whole work, including heating, electric lighting, sanitary apparatus, drainage, boundary fencing and collapsible gates, and the roof is estimated at £25,578.

Remodelling Southport Baths.

The Corporation has received sanction to borrow £33,100 to complete the scheme for the extensions at the Victoria Baths. These include remodelling the premises, providing improved accommodation for the bathers, additional slipper baths, a new entrance hall, a cafe, and the installation of an up-to-date system of filtration with 22,000 gallons of water per hour.

Petition Design, Royal Hospital School, Holbrook.

This scheme, by Messrs. William & T. R. Milburn, of Sunderland, comprises a residential school for 1,100 boys, with accommodation for their general education and special training in seamanship and the various technical trades. The main school buildings are placed on high ground, the central group comprising the schools, the vel. the gymnasium, bathing pond and playing hall being arranged around the parade ground, whilst the administration offices are situated in the heart of the institution. On the flank of the central group is the boys'

residential department, designed upon the detached hostel system, and comprising fourteen hostels, each accommodating eighty boys. The hospital and sanatorium and residential department are all carefully grouped and allocated to the portions of the site in which it is believed they would function to the best advantage. The buildings generally would be constructed of brickwork with stone dressings and reinforced concrete floors and roofs. Flat roofs would be covered with asphalt and pitched roofs with Cornish slates. The total estimated cost of the scheme is £758,000.

The winning design in this competition, by Messrs. Buckland & Haywood, was illustrated in our issue for May 8, 1925.

The Late Lord Leverhulme's Bungalow, Rivington.

The illustrations published in this issue show additions to the Lancashire residence of the late Right Hon. Viscount Leverhulme, which was originally designed by Mr. J. Simpson, F.R.I.B.A. (retired). The additions, which have been made to harmonise with the existing building, include a circular ballroom (44 ft. 6 in. diameter) with minstrel gallery and two alcoves. The floor is laid on "Valtor" dancing springs. The surface of the floor is oak parquet, with a centre representing the points of the compass in walnut, oak, and hard white wood. The walls are coloured dark walnut as a background for tapestries. The dome ceiling is a dark blue, upon which the stars are painted in aluminium leaf as they would correctly appear in the sky upon a date in September. The general contractors were Messrs. W. Townson & Sons, Ltd., of Bolton, and the following were the

sub-contractors:—The Trussed Concrete Steel Co., Ltd., concrete reinforcement; John Tanner & Son, fibrous plaster; Francis Morton, Junr., & Co., "Valtor" spring floor; The Art Pavements and Decorations, Ltd., and Hollis Bros., parquet and wood-block flooring. The architect was Mr. R. Hermon Crook, F.R.I.B.A.

New Jewish Synagogue, St. John's Wood.

This church has been built for the Liberal Jewish Community, which is an offshoot of the orthodox Jewish Church. The front portion of the building is a steel-framed structure, faced with Portland stone, and having fireproof galleries. The rear portion provides a classroom, hall, and meeting room for church purposes. The church accommodates between thirteen and fourteen hundred persons. The front entrance hall has a white marble terrazzo floor which is somewhat out of the ordinary owing to the introduction of lead dividers between the terrazzo, giving it the form of quadrilateral blocks of white with a black intersecting line. Further interesting features are a white stairway and granolithic floor made of "Atlas White" Portland cement and white crushed granite aggregate. The general contractors were Messrs. Bovis, Ltd., Powers, Deane & Ransome, Ltd., supplied the structural steelwork. Messrs. Carter & Co. (London), Ltd., were responsible for the terrazzo flooring in the front entrance hall, and Plastering, Ltd., of Brixton, put in the white granolithic floor and stairway described above. "Truscon" floors were supplied by the Trussed Concrete Steel Co., Ltd.

A New House in Cassiobury Park, Watford. MR. HUBERT LIDBETTER, A.R.I.B.A., Architect.

This house is one of the largest erected in Cassiobury Park. The materials are the local purple brick with pantile roof and Portland stone in an arcade. The accommodation consists of five bedrooms, two bathrooms, and a large amount of cup-board space. The gardens have been laid out by Mr. Herbert Lidbetter, A.R.I.B.A.

THE RELATIONSHIP BETWEEN CONSTRUCTION & DESIGN IN ARCHITECTURE

the course of a lecture on this subject at Northern Polytechnic on Thursday, October 15, Professor A. E. Richardson, I.B.A., said that from the standpoint of construction building had been steadily improving for the past century, but it had just steadily been losing its best attribute, namely, gracious expression. As he understood the matter, there existed a strong line of demarcation between mere building and architecture. For example, whereas the conventions of the eighteenth century encouraged an adherence to classic form, which latter to some extent was complementary to traditional methods of construction, the nineteenth century encouraged an eclectic taste which was at the picturesque. They had also to consider the industrial revolution of the nineteenth century, the discovery of the properties of steel, and the gradual development of stone construction veneered with stone and

at the present time we were still under the influence of late Victorian methods. On the one hand we were hampered by obsolescent byways, and on the other by an innate sluggishness which fettered us to consideration of old styles, and reproductions. Architects' bodies were not wholly to blame for the present position of the arts and crafts. There had been sufficient excuse in professional necessities for the energy that had led in turn to study and analysis of first one phase of the style and then another. To be brief, we had been forced by the eclecticism of the Victorians to view past art as providing an almost inexhaustible store of motives and models from which to retrieve both details and ideas. Such a state of mind was inevitable. We had evidence of its workings in the contemporary architecture of Europe and America. As one writer remarked quite recently, "The Eighth century had been added to the seven described by Ruskin."

But in this process of close study, this dual building up of a repertoire of ideas, the very essentials of building had been relegated to a secondary place. In a small and lonely island, netted with ways of communication, the gradual suppression of local handicrafts and traditional methods had been sure. As individuals might regret the changes, we had to look to the new conditions in the

It was useless to attempt to reimpose the methods of art upon industrial expansion predetermined by questions of economy. Broadly, there were three main elements to be considered, viz., housing, industry, and transport. There were also the divisions into which building could be divided, and these could be enumerated to include domestic, civic, and ecclesiastical art. As to this latter group could be included engineering, which had a specific bearing on building. There were the other branches—planning and regional development. In order to bring about a greater continuity between the various branches of the art in which architecture should have a paramount position, it became essential to work for a closer affinity and co-ordination between these specialised branches. This was not only logical, it was true. But the problem was beyond the power of the individual. Every city and every town had its own particular problem to solve; every village was in a particular position. Therefore, to the study of planning must be added the even more important study of regional development.

The issue of the moment was to differentiate between reproducing old forms and their application to modern needs and the slow evolution of expression in building which had new life. Examination many so-called modern extensions had all the failings of works based solely on tradition. They were generally of a decorative character and aimed at freshness

of form often dissociated from the fabric of the building. At first sight these works had a novelty that attracted, but after a time the freshness became commonplace. A complete revolution in architectural design could not be effected at command. The nature of the art, its ramifications and conflicting interests demanded a compromise. On such reasoning it became clear that the new must to a great extent be determined by precedent, that the qualities and grace of old work and the truth of old craftsmanship must be considered.

To a great extent, modern building practice played its part in artistic expression; apart from steel and reinforced concrete for floors, the majority of buildings were constructed with small materials. We had bricks similar to those used during the last five centuries, and masonry that had changed very little since the time of Sir Christopher Wren. But these materials, except for buildings of small dimensions, were used as veneers to steel structures. There were, of course, exceptional buildings, such as the new cathedral at Liverpool, which had been built entirely of stone, to prove the rule. Small houses and cottages were almost invariably built, apart from character, on traditional methods. On such an analysis it would become clear that for many years the principle of compromise must be observed. The newer methods of construction such as reinforced concrete, reconstructed stone, and various compositions cast into materials of a size convenient to handle, showed the direction in which modern building was tending. The most revolutionary material was that of reinforced concrete, which permitted of buildings being cast *in situ*, ensuring the greatest freedom in treating large spaces and allowing the minimum of support.

At the present architecture was suffering not so much from want of nourishment as from want of training and discipline. It had become coarse and ill-mannered; it had lost the good breeding it once had. Moreover, in expression architecture was not in sympathy with commerce, neither was it regarded as essential to business by those who were obsessed with money-making. Hence the slipshod methods, the lack of culture, the contentment with the reproductions of the antique, and the slavish copying of the second-hand models which represented the feverish contribution of America.

We could not change the present, but it was our duty to project ideas for the benefit of posterity. In such ways was the continuity of the art attained. We felt our way gradually, often retracing our steps and changing our opinions. No longer must we view architecture with insular or parochial eyes; but, being English, we could not escape the dominant traits of our race, or do other than assist the vast tendencies of our times. His advice was not to be led away by mere novelty. The new was ever formed by recasting the old. There were, however, certain subtleties and niceties to be observed. The modern spirit was with us, but it was inarticulate; like London itself, it was a babel of discords and controversies. Small wonder, then, that building lacked vitality. For mankind nothing was impossible. He, for one, looked forward to the time when building would again become instinctive, and an appreciation of its qualities the prerogative of the man in the street. What France had achieved should be the case in this country.

The chief fault to-day in building was the non-observance of first principles. We had a confused idea of styles, of ornaments and details, and a strange facility for mixing them; but it could not be said that our ideas were original. We were fatigued by the effort to learn the past as our teachers would have it learnt, and listless in our essays. The method of improvement was along the structural path.

To examine the theory closer: the skeleton of the plan determined the design. This was a primary truth and must be followed. The constructive faculty next came into play, and this in its workings must be consistent with the main issues of the plan. The third quality, namely, form, was, or should be, of secondary consideration to the two previously mentioned. Form should develop from structure. The past styles were concrete examples recording the psychology of the people who brought such works into existence. It was for us to view the assemblage and to profit by the lessons, but it was our bounden duty as moderns to consider the monolithic properties of reinforced concrete, or of steel and composite structures. The reproduction of the antique must cease; it must give way to an expression which at first might have less grace but more of truth. Gradually, as experience taught, fresh grace would be acquired and a natural style result. As students, they must be conversant with past styles, for these presented the rungs of the ladder by which we have ascended to our present vantage point; but it was no help to the art to return to sheer copyism. There had been too much copying of form for form's sake, and little regard for the distinction between form which represented a lost tradition and form which exactly expressed the requirements and conditions of a problem.

The student from the outset should begin to classify all the buildings of history which exhibited harmony of structure with ultimate form. He would proceed to a general and catholic view of architecture, and would gain an independent outlook freed from the trammels of period and style. He would, in other words, look for the organic merits of a building rather than be seduced by the pictorial side of mere composition. Construction and design, therefore, connoted the return to first principles; in other words, it was the only sure means of securing modern expression in building. It could be argued that designs based entirely on logical reasoning were often ugly; on the other hand, it was equally true that the finest works owed a great deal of their coherent beauty to the observance of elemental truths. Another mistaken policy was to limit architectural study to any particular style or period. At this stage they could again discuss the meaning of structure—in other words, the correlation of building to character, or the endowing of assembled materials with grace.

They had, let it be supposed, arrived at the correct solution to a set of conditions in plan form. The structure in its grouping was determined in three dimensions. There remained: (a) The nature of the materials to be used; (b) the ability to exercise the function of these materials, in terms of strength and expression; (c) the observance of harmony in the use of materials. At this stage they came upon those nebulous qualities—scale, rhythm, sense of proportion, etc., which could be called articulation. The design was now in the embryonic state. This stage of thought in design could be summarised as knowledge of materials and the possibilities arising from the right employment of materials. Definition could be given to the parts of any structure by the correct employment of materials, especially if those materials were introduced exactly in conformity to their proper use.

The next stage, by far the most difficult, was to endow the structure with grace. No man, however gifted, was able to produce a new style of architecture. There were some who in their desire for novelty were prepared to sacrifice efficient requirements. They aimed at symmetry which was illogical or asymmetry which was forced. The unification of the components of a design was the most difficult task; it was one of compromise, and the designer was beset with a hundred conflicting thoughts. Generally he despaired and clothed his building with details which completely wrecked the elemental truths of his scheme.

[The lecture was illustrated by diagrams and slides showing modern buildings.]

THE SANTA BARBARA EARTHQUAKE

By S. HURST SEAGER, F.R.I.B.A., M.T.P.I.

SANTA BARBARA is a city of 30,000 inhabitants, distant about ten hours' journey south of San Francisco. It lies in a shallow valley and spreads itself over an area of about two and a half miles long and two miles wide. The axis of the valley is N.W.-S.E., rising gently from the sea at the south-east end up to the level of the low hills which surround the town. On the axis of the valley is the main street—State-street—and the other streets are all either parallel or at right angles to it. There was originally a stream running down the valley to the sea, and the site chosen for the old mission was on the high ground at the head of the valley on the north-west of the present town. The watercourse was filled up and now forms the centre of State-street. It has been said that this made ground is responsible for the principal damage to the town; but there is just as much damage to individual buildings far from the old valley stream, even up on the foothills in the north-

style, and others built in the flat-roofed style of the Pueblo Indians—are still there to attract tourists and to invite settlement to-day as in the past.

Ten days' residence, which terminated only a few days before the quake, left one with a vivid impression of perhaps the most beautiful town of California—the home of many wealthy Americans, who, having amassed their fortunes in the less highly favoured cities of the East, now devote themselves to community interests in this beautiful western home of their choice.

Fig. 1.—The Railway Station.

east and north-west, showing that the greatest damage is done in the centre of the valley, because along it are gathered the largest number of buildings. These were of the usual heterogeneous character and had no particular interest. The beauty of the town was in the residential areas, and fortunately these have not suffered to any great extent. The undulating tree-lined avenues, bordered by well-kept lawns and a wealth of flowering shrubs—in the midst of which stand the well-designed homes, some large and stately, some excellent examples of the Spanish Mission

Fig. 2.—The Railway Station.

Fig. 3.—The Hotel Californian.

The news of the disaster reached me in San Francisco, and as soon as possible I accepted an invitation to re-visit the town and report on the results. The notes and illustrations are the result of three very full days' work, in which I had every opportunity offered me for making a close inspection of the ruins and of studying the reports which had already been prepared by the State and County Engineers. The Community Arts Association kindly obtained for me, from the architects, details of

Fig. 4.—The Hotel Californian.

the construction of those buildings which had withstood the test of the shock.

Earthquake experts have not yet reported on the causes which led to the disturbance, nor as to the force or direction of the earth waves. There were two major shocks, one on June 29 and the other on July 3, and many minor shocks between these dates.

The N.W.-S.E. streets terminate at their eastern end in an esplanade on the shore of the bay, and the N.E.-S.W. streets (that is, those at right angles to State-street) terminate

Fig. 5.—The Hotel Californian.

at the northern end in low foothills and at the southern end in hills which separate the town from the ocean. Faults are known to exist in the northern hills, and a supposedly existing one close behind the town on the northern side, roughly parallel to State-street, enters the ocean to the south of Santa Barbara. It

Fig. 6.—Californian Hotel Garage.

assumed that the movements in these faults were caused by creating waves at right angles to the direction of the quake, and it will be noted that the examination of the buildings confirms this view; for while many cracks are seen in the walls at right angles to State-street (those facing either N.W. or S.E.) it is those facing State-street (that is, those facing N.E. or S.W.) which either show no significant fracture or else have some parts thrown to the ground.

Nothing can be learned from the buildings which have produced the most spectacular effects by tumbling to pieces, heaps of ruins without any cohesion in the materials which they were constructed, such as the central parts of the Arlington Hotel, the part of San Marcos Store, and the California Hotel. Fortunately there was no damage by fire, as there was in the San Francisco earthquake of 1906. There the damage from the quake was greater than that from the quake of 1906, so that all San Franciscans unite in sympathy for the victims of the earthquake, but of the "great" in the vain endeavour to make people

Fig. 7.—The Hotel Neal.

their city is subject to earthquake shocks. Santa Barbara only one of the reservoirs is broken, and any fire which occurred within the range of the supply was immediately extinguished by the water available from the river. The precaution was also taken to cut off all electric power and the gas supply.

But during my visit a disaster from fire nearly overtook the town. A violent hot wind had been blowing all day and increased to a hurricane at night, when the temperature reached 104 degrees Fahrenheit. It came from the Mojave Desert and reached us as from a furnace. Everyone's thoughts were naturally directed to the enormous risk of widespread destruction should a fire get a firm hold of the buildings; for all knew that under the circumstances no power could possibly cope with it. In this state of mind we went to our rooms. Sleep was out of the question, so that it can easily be imagined with what alacrity we responded to a call when at 11.30 we were informed that what we feared had taken place. A large fire was raging to the north-west of the town in the direct line of the hurricane. We were told to pack up all our belongings and to await developments on the verandah. As we gathered and watched with anxiety the rise and fall of the brilliant illumination in the sky. We could not see the actual flames for they were on the other side of rising ground, which lay about half-a-mile from us. For two hours we discussed what should be done if the flames came over the brow. Nearly all the guests had motor-cars—all had different ideas as to the direction they would take, if it was found necessary to flee. We could see that the whole town was alarmed, and we knew that in all the houses which were lighted the same subject was being discussed.

The risk from driving motor-cars is great enough at all times, as is proved by the fact that in 1924 no less than 26,000 deaths and 10,000 casualties occurred in the United States from motor-car accidents—this when people were in their right minds and free from pursuing danger. It was a grim thought to contemplate what would have happened if the thousands of motor-cars had suddenly dashed to safety. Most careful regulations had been made for directing the traffic during the day, but it would have been impossible to make regulations to ensure safety under such abnormal conditions. It was a relief, therefore,

to see the glow gradually dying down and finally disappear. We learned it had arisen from a large grass and bush fire close to the town, and it had only been extinguished by calling out the 200 marines stationed in the town, who aided the fire brigade and inhabitants in beating it out just as it reached the buildings on the north-west side. We were told that such a wind and such a temperature were "most exceptional" for Santa Barbara, and the refreshing appearance of the gardens and avenues stand as a witness to the truth of this assertion.

The disaster at Santa Barbara will therefore be known as the earthquake of 1925, and the resultant nervousness minimised as far as

Fig. 9.—The Arlington Hotel.

possible by the creation of a jubilant optimism. This is effected by organising "Community Sings" in the beautiful park in the centre of the town and by public meetings of rejoicing

Fig. 10.—The Arlington Hotel.

that now the opportunity has arisen for widening State-street, and rebuilding it under a well-thought-out scheme from end to end. A grand opportunity indeed; and, if the enthusiasm shown at the first meetings of the property-holders is sustained, the result should be to make Santa Barbara famous, not only for the beauty of its scenery and the excellence of its climate, but also for the design of its architecture in its central street. The style selected is that introduced by the Spanish missionaries in the eighteenth century and is known as the Spanish Mission style—a style most appropriate from an historical and practical point of view. There are several modern buildings in the town, as throughout California, which are delightful examples of adaptations to meet the requirements of our modern life.

Fig. 11.—Trinity Church, looking East.

Large masses of plain, rough-cast surfaces, relieved by square-headed windows, having at times rich architraves and beautifully wrought-iron grilles; round arched arcades and interior courtyards or "patois" are the characteristic features. So optimistic are the community leaders that they arranged for one of the "Sings"—at which I was present—to commence with the grand, uplifting hymn, "Praise God from Whom All Blessings Flow."

It certainly was miraculous—and may be regarded as a blessing—that out of the 30,000 inhabitants only nineteen lives should have been lost in such a wreckage as the illustrations show. This can be accounted for by the fact that the quake occurred at 6.42 in the morning, before the business premises, where the greatest damage was done, were occupied. As stated, residences suffered comparatively little, the greatest damage to them being caused by the fall of chimney stacks; very few were left standing, for the reason that nowhere had the precaution been taken to allow for the difference between the quick oscillation of the wooden structure and the slower oscillation of the chimney itself. This damage would have been prevented if a space of about 3 in. had been left all round the chimney between the brickwork and the roof and the space covered only by the flashing. In this case the only result from the lack of synchronisation would have been the ruin of the flashing.

All the accounts from those who felt the quakes agree that they were violent ones, not a simple rocking, and the conclusion is inevitably reached that any buildings which are scientifically designed and honestly constructed, of whatever material, may be proof against any shocks which are likely to occur. This is borne out by the fact that buildings of

Fig. 12.—Trinity Church.

Fig. 8.—A Church in State-street.

Fig. 13.—The Mission Church of Santa Barbara.

timber, brick, stone, steel-frame, and concrete-frame reinforced with steel ties, are still intact in various parts of the town.

FOLLOWING are some special notes on the illustrations accompanying this article:—

No. 1. THE RAILWAY STATION.

At the south-east end of State-street, the direction of the long axis is W.S.W.—E.N.E. The building is of solid concrete without ties. This would account for the horizontal cracks one foot below the window sills and over the arches all around the building. The piers and arches are quite uninjured, except at the end arcade (see No. 2). The fractures are probably on the line of junction of the layers of concrete.

No. 2. RAILWAY STATION.

Arcade at W.S.W. end showing complete vertical fracture against main building. This would not have occurred if horizontal iron ties had been put above the arches to take up the tensile stresses which would be created by the oscillation of the building on its main axis.

No. 3. THE HOTEL CALIFORNIAN.

The N.E. front and part of S.W. side; it is a new brick building, but so badly constructed that the side walls facing S.E. and N.W. could not resist the diagonal strains set up. It is interesting to note that while the N.E.—S.W. oscillations cracked the side parapet, and moved it horizontally, the front N.E. parapet was completely thrown off. Interesting too, is the form the fractures took on the S.E. side (see No. 4).

No. 4. THE HOTEL CALIFORNIAN.

The northern end of the S.E. side showing the only portion of the wall which remained standing.

No. 5. THE HOTEL CALIFORNIAN.

The southern of the S.E. side showing the wall completely demolished, and the floor joists supported by the floor boards and lathing. Iron ties at rare intervals were placed into the bad mortar joints, and failed completely to fulfil their purpose. There is no sign of any hoop-iron bond in the brickwork. The debris shows a total disintegration of brickwork.

No. 6. CALIFORNIAN HOTEL GARAGE.

Totally destroyed; showing the type of construction used in this building throughout, and in the majority of buildings as "curtain" or filling walls between reinforced concrete framework. Note bad mortar joints—an extremely common fault.

Fig. 14.—El Paseo—the Patio.

No. 7. HOTEL NEAL.

Showing a very common and iniquitous form of construction; timber framing faced with brick, 4½ in. thick, and held to the studs by 6 in. nails driven into them. The upper part is of stucco facing and looks fairly sound, but is, in fact, in a dangerous condition. Sometimes the facing is of stone (see No. 8).

No. 8. A CHURCH IN STATE-STREET.

The form of construction referred to under (7) is here seen. All the work is done by the timber

Fig. 16.—The San Marcos Building, looking South-west.

framing, on which the thin stone slabs are suspended. Until the last month Santa Barbara had no building by-laws to keep erring architects out and contractors in the paths of rectitude.

No. 9. THE ARLINGTON HOTEL.

Santa Barbara's leading hotel, the resort of California's wealthy clients; furnished with every convenience—all "modern comforts"—except sound and honest construction. There was a tower to match one that stood the shock; but in this was a water tank holding 62,000 gallons, it crashed and carried with it the floors which are left hanging as shown. The remainder of the building is so badly damaged that it will have to be pulled down (see No. 10).

No. 10. THE ARLINGTON HOTEL.

Heaps of debris at the foot of the fallen tower. Ample reinforcement was used, but the concrete was too rotten to hold, as is shown by the quantity exposed.

No. 11. TRINITY CHURCH, LOOKING EAST.

Showing fallen gable of S.W. end of church. It was well built, as is shown by the fallen blocks, of brick and concrete. The wall was three bricks thick with very solid joints. The N.W. and S.E. side of the church shows no damage, but the tower is badly damaged. The belfry windows on the N.W. and S.E. side are very much broken, while those on the S.W. and N.E. side are only cracked. The tower is connected to the church and naturally its oscillation would be slower than that of the church; this might account for the throwing off of the gable; but it is probable it would not have occurred had the purlins been tied to the gable; they simply rested on the wall-plate. That the construction was sound is shown by No. 12.

No. 12. TRINITY CHURCH.

The debris of the fallen gable. The only instance of blocks of brickwork which have no disintegration. The concrete lintels are also in large blocks and the ties are still firmly fixed in them.

No. 13. THE MISSION CHURCH OF SANTA BARBARA.

The inferior workmanship of the tower accounts for their fall. They are of stone resting on "adobe" or clay walls.

No. 14. EL PASEO—THE PATIO.

Fortunately, among the many undamaged buildings is the El Paseo—a delightful grouping of offices and shops designed in the Spanish Mission style. The patio, or courtyard, overhung with an awning, is used as a restaurant.

Fig. 15.—The San Marcos Building, looking South.

Fig. 17.—The Carrillo Hotel.

Fig. 18.—The Carrillo Hotel.

5. THE SAN MARCOS BUILDING, LOOKING SOUTH.

A spectacular ruin is the result of building an addition to an existing building without any care to tie the one firmly to the other. The reinforced concrete building and is worthy of a study than I could give it; but the one I have formed is, that the portion of the original building facing north-east of State-street would pass through this portion and on the left of the illustration met the force of a shock travelling south-west. The oscillation set up would pass through this portion and communicated to the addition; through the built at right-angles and therefore facing south-west—it would continue, while that portion on State-street swung back towards the east, leaving a gap between the two portions; the two movements in opposite directions would come together with such violence that the angle of the original building was bound to be completely demolished. The addition on the north-west had not sufficient ties to the diagonal stresses set up and large parts of the north-east end were thrown off, as shown. The ties at the south-west end were strong enough to prevent damage there can be seen by photograph No. 16.

6. THE SAN MARCOS BUILDING, LOOKING SOUTH-WEST.

Part of the addition facing north-west. The joints are of stamped steel, and this accounts for their remaining intact.

No. 17. THE CARRILLO HOTEL.

One of the many illustrations of a reinforced concrete frame building with surrounding brick and curtain walls either of brick or terra-cotta being able to stand the strain. It will be seen that the walls of the upper four stories are, though the ground floor curtain walls have been considerably damaged. This is to be attributed for by the fact that the ground floor walls were not strong enough to resist diagonal strain. But the piers are firmly attached to the top by the beam, and on it the whole

of the building above swayed to and fro without injury. There are, however, horizontal cracks at the base of the piers and slight cracks at the junction of the piers to the beam.

No. 18. THE CARRILLO HOTEL.

North-west side of ground floor at the west angle, showing destruction of brick casings of the piers to the height of the horizontal beam.

No. 19. THE CARRILLO HOTEL.

The north-east front showing fractures of brick casing to the height of the windows.

craftsman with a public taught to respect tradition and to appreciate the value of harmony, mutual trust, and respect.

The City of Architectural Re-birth : Palaces of Florence.

A lecture on "The Palaces and Churches of Florence," the first city where the newly-revived Classic traditions, called the "Renaissance," took root, was given on Wednesday last by Sir Banister Fletcher, V.-P.R.I.B.A., at the Central School of Arts and Crafts. He first pointed out the geographical position of Florence, and showed how the number of small states fostered a keen municipal spirit. The rule of the art-loving Medici family and the growth of art guilds in Florence gave rise to the stimulus in architecture which caused the adoption of the Renaissance, a use not merely of old forms but of new and pleasing combinations of these forms. Beautiful marble from the quarries of Carrara had great influence in producing the refinement of the style, and the brilliant climate resulted in the rugged facades and deeply frowning cornices of the palaces, such as the Palazzo Riccardi, the Palazzo Pitti, and others, which the lecturer illustrated by slides. Symmetry of classic origin is combined with variety and picturesqueness in detail. The next lecture (October 21), dealt with "The Palaces of Genoa and Milan."

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—ED.

Boundary Wall Question.

[REPLY TO "OLD READER," OCTOBER 16.]

SIR,—I gather that everything has been done to settle this matter, but without success. The mould adjacent to the walls constitutes a nuisance and should be dealt with by application to the local council. It is obvious that the law compels one to have a damp-course in a dwelling-house wall, whether party or otherwise, and it therefore follows that steps must be taken to make same effective. The question of the shed can then be raised—as to whether due permission was given by the council before its erection. If this was not given an order will probably be given for removal.

G. W. H.

Concrete Bricks.

SIR,—In a district where it is extremely difficult and expensive to get ordinary bricks for building I am contemplating the erection of a fairly large number of lower middle-class houses, and desire to build them as cheaply as possible. I propose to obtain a hand-pressure brickmaking machine, using sand and gravel (of which there are large quantities on the site), combined with Portland cement in the proportion of 6 to 1, and after the bricks are thoroughly dry to use them in the ordinary way for building the houses. Would this brick work make a sound, substantial, and weather-resisting job, or would there be a danger of the bricks absorbing moisture which might penetrate through the walls to the interiors of the houses?

F. J. W.

Lath and Plaster Repairs.

[REPLY TO "MANAGER OF HOUSE PROPERTY," OCTOBER 16.]

In my opinion querist cannot do better than make use of the price list of building costs given every week in your journal, remembering always that the prices are for new buildings, and to add accordingly for old buildings, which may be worth anything from 25 per cent. to 50 per cent. more, according to quality and where situated.

G. W. H.

Treatment of Dairy Floor.

[REPLY TO "DAIRIES," OCTOBER 16.]

SIR,—I carried out some very large areas of dairy floor for a well-known dairy company in the following manner:—Ground floor: 4 in. to 6 in. hardcore, 4 in. Portland cement concrete, 6 and 1 gauge; when set, finished on top with 3 in. thickness of granite chippings and Portland cement with sufficient sand to fill interstices gauged to 2 and 1. In the centre of the 3 in. a reinforcement was inserted and all finished off together while green, in sections sufficient for a day's work, and allowed to be properly set before using, and well watered every day to harden same. This floor stood well for heavy work of dairies. I also laid asphalt in one coat $\frac{3}{4}$ in. thick, with granite chippings added while in the cauldron, with excellent results.

G. W. H.

Paving Materials.

[REPLY TO "BETON," OCTOBER 9.]

SIR,—The first method of paving would cost about 6s. 9d. per foot run, reckoning 8s. 6d. per yard super. for 2 in. flags laid complete. The second method seems to be extravagantly specified; it is quite sufficient to do little more than level up in ashes and cover with 2 in. of tarmac, and if granite chippings are available in the neighbourhood, a sprinkling of these on the wet surface is an excellent treatment. Such a paving as described would cost about 5s. 9d. per foot run. A reinforced concrete curb and channel combined with channel 6 in. deep by 12 in. wide, and upstanding curb 4 in. wide, and

rising 2 in. above the higher end of the channel would cost in any fair quantity about 3s. 4d. per foot run. Such a curb is not to be recommended as it is likely to become broken away with the scraping of wheels. I have recently put down a short length of such curb with a granite aggregate as a continuation of a similar granite curb, and the concrete curb compares very unfavourably, though little more than half the price.

"ROADS."

Fungus on Timber Floor.

[REPLY TO "PUZZLED," OCTOBER 9.]

SIR,—Such a floor as described, if properly laid, should not be troubled with fungoid growth, and should be taken up and thoroughly examined. The most frequent cause of the trouble in such a case is failure to drive in and cover with concrete the level pegs used when laying the surface, and if this is the case this should be remedied and the surface re-coated with hot tar before the boards are replaced. Another cause is the laying of the boards while the concrete is still green, and again it will be necessary to re-coat with tar before re-flooring. Take particular care to burn all woodwork that has been effected with fungus, or there will be no cure at all.

"ROT."

Corrosion of Roof Shed.

SIR,—Having to replace a roof over a shed where steam and ammonia, also sulphuric acid fumes, attack the materials, I shall be glad to learn whether any of your readers have had a similar experience. If so, would they be good enough to suggest means of overcoming the corrosion by using either special materials in the construction of the new roof, or painting with special paint, or treating otherwise. The existing roof is six spans wide of 35 ft. each—"Queen" post trusses, ends carried on cast-iron columns, cast-iron valley gutters flanged and carrying feet of spars, which are not under-drawn. Roof covering is of slates. Roof light glazed into wooden bars in putty. Continuous vent, along ridge thus:—

Suggestions are: "Queen" post trusses all bolted together instead of the usual outside straps. Ends of bolts to be sunk in and covered. Steel trusses to be specially painted. Reinforced concrete trusses and stanchions. Patent glazing in all cases. Corrugated cement sheeting in all cases.

"QUERIST."

Combined Drains.

[REPLIES TO "S. P. T.," CROYDON, OCTOBER 9.]

SIR,—Under the Public Health Act, 1875, "drain" "means any drain of and used for the drainage of one building only, or premises within the same cartilage," and "sewer" "includes sewers and drains of every description except drains to which the word 'drain' interpreted as aforesaid applies." The effect of these two definitions is that a drain can be said to be that which receives the drainage of one house, while a sewer is that which receives the drainage of two or more. But under Section 19 of the Public Health Act, 1890, if the Act is in force in the district, when two or more houses belonging to different owners are connected with a public sewer by a single private drain, such drain may for certain purposes be treated as a drain and not as a sewer. The owner or occupier of any premises has the absolute right, in the case of domestic sewage, to empty his drains into the sewers of the local authority; but in the case of manufacturing and trade effluents this right is considerably qualified by statutory restrictions. The local authority must approve the connection, but in making the connection neither the owner or occupier or the local authority is entitled to trespass upon

private land. Once the connection has been made with the sanction or acquiescence of the local authority, or if the right to discharge into a sewer has been acquired by prescription, cannot be cut off by the authority without a new arrangement is made.

In general it may be stated that the local authority can enforce the drainage of a house to a sewer it is entitled to use, if it is not more than 100 ft. from the site of such house. The local authority has the power of adapting existing sewers to alterations made by them in the sewer, and the expense of such works of reconstruction provided must be paid by the local authority. If, however, a drain appears to be in breach of the local authority is entitled to serve the occupier with a notice to cleanse, and if he does not comply, amend at his, the owner's, expense. The local authority is insufficiently comprehensive answer to be given, but seen from the above that if the connection of the new drain was made to a private sewer already running through the adjoining land and without his sanction or any prescriptive right, the adjoining owner has the power for trespass, and that even where the connection to which the new house drain was connected was a "combined drain," and therefore vested in the local authority, the owner or occupier has no right to trespass upon the land to make the connection. If, as appears, the connection was wrongly made, the remedy is for a connection to be made to a sewer elsewhere, if it is within the prescribed distance—in the circumstances the owner's or occupier's expense.

SIR,—Generally, in the deeds of the property concerned, there will be found provision for drainage over neighbouring property. Where this can be substantiated there will be no difficulty in showing the adjoining owner such rights must be respected. Where record does not exist, proof of such right will need to be shown; but unless a drain is of recent date and connected with the knowledge and consent of the owner, the latter has no right to cut off a drain. Whether the local authority has power to demand connection to a public sewer put in at a later date and running over the original owner's property, will very largely upon the local by-laws should be studied.

Nine-Hole Golf Course.

SIR,—I shall be much obliged if you will give me information as to the cost of making a nine-hole golf course on grass land, and if there are firms who undertake such work.

Condensation in Basement.

[REPLY TO "READER," OCTOBER 9.]

SIR,—Excessive condensation, especially in the case of a basement, is more often due to inadequate ventilation. To overcome this difficulty, the most effective means of ventilation should first be tried before going to any drastic lengths suggested in your correspondent's letter. If there is a convenient flue into the basement large air brick could be inserted, this in an excellent upcast as an extractor; and are pavement lights, one or two rows of perforated ventilating panels, inserted in the walls, will afford the means of air inlet. Usually, the main cause of condensation is an excessive difference in the relative humidity of the outside and inside atmospheres, and ventilation for a reduction in this difference.

"FRESH"

Mortar.

SIR,—A building in which only cement is used generally means slow brickwork compared with one in lime mortar. Is there any means of treating the cement mortar so that it will work "fatter," and so lead to more being laid, without materially reducing the quality and strength of the work?

"BRICKLAYER"

THE BUILDING TRADE.

THE ROADS IMPROVEMENT ACT, 1925

AN Act came into force on August 7 which has received little public notice, entitled the Roads Improvement Act, 1925. This contains many important provisions, some of which have bearing upon our recent note, "The Country-side," in which we pointed out that a clearing of corners very often but leads to increased danger and hence increased danger. This measure is of a composite character, for whilst it empowers highway authorities to plant trees or shrubs and lay out grass margins on any highway maintainable by them (section 1, subsection (1)); it also contains restrictive provisions to prevent the obstruction of view at corners (section (4)). The powers under section 1 have to be exercised so as not to hinder the reasonable use of the highway by persons using the same or so as to be a nuisance to owners or occupiers of premises adjoining the highway, and by subsection (5) damage is so caused the owner or occupier to recover compensation to be assessed as provided in section 9. By section 2, section 8, subsection (5) of the Development and Roads Improvement Funds Act, 1909, is amended so as to include in the expression "improvement of roads" the planting of trees and laying out of grass margins.

Here, however, ends the æsthetic side of the Act, and a different note is struck in section 4, which provides that where the Minister of Transport or any highway authority is of opinion that it is necessary for the prevention of danger arising from obstruction to view of persons using the highway with respect to any land at or near any corner or bend in a highway, a notice may be served upon (a) the owner or occupier of the land directing him to alter the character or height of any wall or fence forming part of the structure of a permanent edifice, fence or hedge so as to cause it to conform with the requirements specified in the notice, or (b) upon any owner, occupier or lessee of the land training them either absolutely or subject to such conditions as may be specified in the notice from permitting any building, wall, fence, or hedge to be erected or planted on the land. By section 11 "hedge" is to include trees.

Before considering the rest of the section we remind our readers that obstruction to view by trees is also now dealt with by section 23 of the Public Health Act, 1925, which we are dealing with in another article. Turning to the Roads Act, it is provided in proviso (ii) to section 4 that a notice restraining the erection of any building upon land shall not be served by the Minister or any county council or other highway authority without the consent of the local authority of the district in which the land is situated, and under proviso (iii) the owner or occupier of any land shall not be restrained by a notice under this section from executing or permitting the reconstruction or repair of any building which was upon the land before the service of the notice, provided such reconstruction or repair does not create a new obstruction to the view of persons using the highway. By subsection 2 of section 4 the restrictions imposed by a notice are to remain in force until withdrawn by the authority by whom the notice was served, and are to be binding on successors in title to the owner or occupier of the land, subject, however, to the proviso "unless he" (the successor in title) "proves that when he became owner or occupier he had, after making inquiries, no reasonable cause to suspect any such restrictions were in force." Litigation is certain to arise in connection with this provision, which imposes a restriction on the title to land, as also from subsection (4), which provides that any person

served with a notice under this section shall have power, notwithstanding anything in any conveyance, or in any lease or other agreement to do all such things as may be necessary for complying with the requirements of the notice. The Legislature attempts to simplify the conveyance of land in one set of Statutes whilst at the same time complicating it in other statutes.

By subsection (3) a person served with a notice may within 14 days object to any requirement or restriction in writing to the authority by whom it was served, and this objection will be dealt with as defined in section 9, i.e., by a single arbitrator appointed by the parties, or, in default of such agreement, by the county court. The arbitrator or the county court shall have power to modify any requirement or restriction.

By subsection (5) where a notice has been served the authority by whom it was served may with the consent of the person on whom it was served do anything on his behalf necessary for complying with the notice. Where a notice has been served penalties are by subsection (6) imposed on any person who fails to comply with the provisions, and when a conviction has taken place unless the requirements of the notice are complied with within a time to be fixed by the court, the person shall be guilty of a continuing offence and a daily penalty.

Subsection (7) deals with expenses and compensation. The expenses reasonably incurred in complying with the provisions of notices may be recovered from the authority by whom the notice was served, and any person "sustaining loss in direct consequence of any requirement of a notice served under this section or who proves that his property is injuriously affected by restrictions imposed by any such notice, shall, if he makes a claim within six months after the service of the notice, be entitled to compensation."

The expenses are by section 8 to be paid out of the Road Fund, and the question as to whether expenses were reasonably incurred and whether compensation is payable and the amount will be determined under section 9, that is, as we have indicated above, either by a single arbitrator appointed by the parties or in default of such agreement by the county court.

Building Line.

Section 5 deals with the prescription of building lines by county councils or other highway authorities. Subsection (1) provides that subject to the provisions of this section a county council or other highway authority may by resolution prescribe in relation to either side of any part of a highway maintainable by them a frontage line for building which shall be referred to as "a building line."

It will be remembered that the Public Health Act, 1925, in sections 33 and 34, enables the local authority in respect of streets reparable by them or the county council in respect of main roads to prescribe "an improvement line" where (a) any street reparable by the inhabitants at large is narrow or inconvenient or without any sufficiently regular boundary or (b) it is necessary that such street shall be widened, but in section 5 of the Roads Improvement Act the power seems conferred without any such limitation. We are dealing with that "improvement line" in articles on the Public Health Act, 1925, but it was recognised in the Ministry's Memorandum which was issued in respect to that Act, that it was possible the two lines "improvement line" and the "building line" may exist in the same district.

Returning to section 5 subsection (1) of the Roads Improvement Act, 1925, there are two

provisos in this subsection. The first proviso (a) enacts that the Minister may by order direct that a building line shall not be prescribed in relation to any class of road classified by him under subsection 2 of section 17 of the Ministry of Transport Act, 1919, until notification of the building line proposed has been sent to him and his observations thereon have been considered. The roads here referred to are roads classified by the Minister and in respect of which the Minister defrays half the salary and establishment charges of the engineer or surveyor to the local authority responsible for the maintenance of such roads.

Proviso (b) provides that before a building line is prescribed (i) affecting any main road maintainable by an urban authority by virtue of subsection (2) of section 11 of the Local Government Act, 1888, notification of the building line proposed shall be sent to the council of any county in which any land affected is situated, and (ii) if the building line is proposed by the county council, notice shall be sent to the local authority for every district in which any land affected is situated and to every authority for the time being authorised to make a scheme under the Town-planning Act, 1925, or under any enactment repealed by that Act. The authorities to which this notification is sent may make observations, and if these observations are made within three months of the notification they shall be considered by the authority proposing the building line.

The roads mentioned in the first proviso are main roads within the meaning of the Highways and Locomotives (Amendment) Act, 1878, which, under section 11 subsection (2) of the Local Government Act, 1888, the district councils claimed to retain. As regards the second proviso, "local authority" for the purposes of the Town-planning Act, 1925, is by section 20 of that Act defined " (a) as regards the administrative county of London the London County Council and (b) elsewhere the council of the borough or urban or rural district."

Procedure to be Followed.

The procedure to be followed in prescribing a building line seems closely assimilated to the procedure prescribed by the Public Health Act, 1925, in the case of an "improvement line." Thus by subsection (2) of section 5, the building line proposed has to be shown on plans signed by the clerk and deposited with the clerk of the authority, and the plans are to be open to inspection by the public without charge. Before the building line is prescribed notice in writing of the proposal and of the times and place where the plans can be inspected shall be served upon every owner, occupier or lessee of land proposed to be affected, and any objection made within six weeks after service shall be considered. Within six weeks after the building line has been prescribed the plan shall be sealed and authenticated by the signature of the clerk, and again notice has to be served on the above parties.

This second notice of the building line, having been prescribed, is different from the procedure under the Public Health Act in the case where an "improvement line" has been prescribed, for in that case when the plans have been sealed and authenticated the improvement line comes into force and notice of the prescription having been made is not required. Under both Statutes it will be observed that no appeal is given to owners and others affected, and they have to be satisfied with the rather empty assurance that their objections will be "considered" for the provision for arbitration contained in section 9 in the case of objection does not apply to section 5. Subsection (3) closely resembles subsection 5 of section 33 of the Public Health Act; it provides that where a building line is in force it shall not be lawful without the

consent of the authority by whom it was prescribed to erect or make nearer to the middle of the highway than the building line any new building other than a boundary wall or fence, or any permanent excavation below the level of the highway.

Subsection (4) makes it an offence to infringe the building line, and imposes penalties, and so far resembles subsection 12 of section 33 of the Public Health Act, but it goes further, for it provides that any person so convicted shall within such time as the Court may allow "remove any building erected or fill in any excavation made in contravention of this section," and failing to do so shall be guilty of a continuing offence.

Subsection 5 deals with compensation to persons whose property is injuriously affected by the prescription of a building line, and, as under the Public Health Act, the compensation is to be assessed under the Acquisition of Land (Assessment of Compensation) Act, 1919, but there is a difference in the other provisions; for instance, in the case of persons injuriously affected the claim must be made within six months of the line being prescribed, but if such persons are owners, occupiers or lessees within six months of the service of notice of the prescription; the distinction between the two classes is by no means clear. No compensation is payable to any person in respect of anything done by him or on his behalf after the date of service of the proposal to prescribe a building line (subsection 5 (a)) and there is a betterment clause (subsection 5 (b)).

By subsection (6) in the administrative County of London the powers conferred by this Act are to be exercised by the London County Council, and by subsection (7) the powers conferred by this Act shall be in addition to and not in derogation of any powers conferred upon the authorities by any other Act.

By subsection (8) certain undertakings are excepted from this section. Section 10 contains provisions as to notices. We have referred to the most generally important sections of the Act, but in conclusion we may mention certain definitions contained in section 11. "Building" includes any erection of whatsoever material and in whatsoever manner constructed and any part of a building. "Fence" includes any hoarding or paling. "Hedge" includes any tree or shrub whether forming part of a hedge or not. "Local authority for the district" means as respects land in the administrative County of London, the Common Council of the City of London, or a metropolitan borough council, as the case may require, and as respects any other land, the district council. "New building" includes any addition to an existing building. "Wall" includes any partition of whatsoever material constructed, and any bank." The above is only a summary of the principal provisions of the Act.

TRADES TRAINING SCHOOLS

THE annual prize distribution of the Trades Training Schools took place on Friday last week at the Carpenters' Hall, London Wall. The Schools are conducted by the following City Guilds:—The Armourers and Braziers, Carpenters, Glaziers, Joiners, Paint-Stainers, Pewterers, Plasterers, Tylers and Bricklayers and Wheelwrights, at Great Titchfield-street, under the Directorship of Sir Banister Fletcher, F.R.I.B.A.

The thirty-second annual report, read by Mr. Frederick Sutton, chairman of the Schools Committee, showed a considerable increase in the number of students, which exceeded the records for many years past.

Sir Banister Fletcher read his report on the work of the past year, which stated that the attendance at the Schools totalled 14,355, an

average of 96.34 for every working evening. The demonstrations given by the instructors to architectural students from University College had been maintained, and thus a link existed between the theoretical and the practical aspects of the comprehensive art of building. The instructors in the various classes continued to keep burning the fires of progress and achievement, and the Schools were fortunate in having the services of those who had not only the rare gift of teaching but who were of high standing in their crafts. The associated City Companies did not lag behind the other Companies in their determination to carry on the mediæval tradition of craft organisation and service which had been handed down to them, and they bore the entire expense of carrying on the work independent of any outside aid or subsidy. The most diverse quarters of the City yielded keen learners of different ages who came for guidance and improvement, and more demands were made on the Schools than it was possible to supply with the present accommodation. Many students were sent expressly to the classes by their employers for the tuition which they needed. All the work was handicraft, and no machinery was employed to fashion it, and as a consequence the personal ideal was adhered to. One of the great objects of the Schools was to teach not only the governing principles of the various crafts, but also the best way of carrying out the technical details, combined with the most up-to-date methods of modern craftsmanship. An effort was made to implant a desire for good work for its own sake, apart from the pay it might command, and thus leave the lasting impression on the minds of students that everything that beautified and ennobled was worth while. "Work hard when at work and play hard when at play" was a motto he could give the students, and he felt that the training given was not only productive of sound workmanship, but it also played its part in the formation of character.

The prizes, medals and certificates were distributed by the Right Hon. Sir Douglas M. Hogg, M.P., K.C., who afterwards addressed a few words to the students. He said he had an hereditary interest in technical education, and above all in the great borough of St. Marylebone. On his visit to the Trades Training Schools in Great Titchfield-street he was very pleased to see in every class he visited that the men who were in charge were men who had worked and were working in the very trades in which they were instructing. When work began in the Regent-street Polytechnic some forty-three years ago, when technical education was being developed there, the trade unions regarded it with considerable suspicion; but they were now their best friends and supporters, because the class of people exclusively catered for were not those who wanted to get just a smattering of the trades but who were working day by day in those trades, and he found the same plan had been adopted by the Companies' Schools. Pride in workmanship was not dead, because the men who were learning the skilled crafts had a real love for them and a real pride in their craftsmanship, and because they knew by their sacrifice of time and energy they were qualifying themselves to take better and higher positions, which they could never hope to reach if they did not put in such work, and thus they were doing a great deal for their trade and their country. He referred to the public spirit the Companies were displaying in spending their money to educate, improve and qualify the craftsmen, and he congratulated the students on their interest and public spirit which made them enter the classes which were carrying them to triumphant success.

A vote of thanks to Sir Douglas Hogg, proposed by Professor W. H. Wagstaffe, Master of the Armourers and Braziers Company, seconded by Mr. O. Satchell, was carried unanimously.

Amongst those present were Sir George Frampton, R.A., Sir W. Goscombe John, R.A., Mr. E. Guy Dawber, V.-P.R.I.B.A.,

Mr. Arthur Keen, F.R.I.B.A., the Master Wardens and Clerk of the Carpenters' Company, the Masters of the Painters, Armourers and Braziers, Plasterers, and Tylers and Bricklayers Companies.

THE NATIONAL FEDERATION OF HOUSE BUILDERS

HALF-YEARLY MEETING AT BLACKPOOL

THE half-yearly meeting of the National Federation of House Builders was held at the Town Hall, Blackpool, on Friday and Saturday last and was attended by a large number of house builders from all parts of the country. Mr. G. F. Darbyshire (Manchester), the President of the Federation, proposed the following resolution, which was carried unanimously:—"That all local authorities' housing schemes should be confined to the erection of houses to be let at economic rents not exceeding ten shillings a week inclusive of rates after deducting the subsidy from the Government and the local authority, and that the Government be requested to refuse to sanction the erection by the local authorities of houses at higher rents, or for as long a period as the requirements of the poorer-working classes have been met."

In proposing the resolution, Mr. Darbyshire said that there was one unalterable factor in the building of houses on which all housing reform must necessarily rest—the amount which was available for rent in the working-class budget. House builders have always had to build houses with the rent in view, but local authorities approached the question from another standpoint. Their fixed factor was not the rent which could be obtained, but the garden city idea, and in many cases they laid it down that the people must have certain types of houses whether they wanted them or not. It was not every working man who wanted a large garden, and houses should be provided for those who did not care for gardening as well as for those who did. Before the war 65 per cent. of the houses were of a rateable value exceeding £10, and it was obvious that this was the one most wanted. Local authorities had thousands of names on their waiting lists, waiting for the smaller houses, and at the same time they were being built the demand for the larger types was getting larger rather than being reduced. The old cry of the Federation—"Remove the Rents Restriction Act and solve the housing problem," was as true today as it was five years ago; there was only one solution, and that was to restore confidence in housing as an investment. The present plan of municipal enterprise was but a temporary subterfuge; it could never provide a solution of the housing difficulty. Mr. George Satchell (Nottingham) seconded the resolution. An active discussion ensued as to the figure given in the resolution for the maximum rent of municipal houses. Mr. J. W. Comben (Wembley) said that it was too low, and Mr. C. H. St. John (Hull) that the figure was rather high. Mr. R. A. Costain (Liverpool) quoted figures to show that a house could be provided for 10s. per week and the resolution was passed as stated.

The second resolution aroused a lively debate on the amount which might reasonably be expected as a deposit on the sale of a house. The previous Federation resolution had stated:—"That as a suitable figure, but as a number of local authorities were selling houses for a deposit considerably less than that amount," it was that the purchaser of a house from a private builder should have the same facilities, and a resolution proposed by Mr. A. J. Belton (Sheffield) and seconded by Mr. J. B. Milner (Manchester), was unanimously adopted as follows:—"That in the opinion of this meeting prices should be brought to bear by the Government, the local authorities to make grants, an advance capital on mortgage under the provisions of the Housing Acts to the full ninety per cent. permitted under those Acts, thereby enabling the thrifty working man to purchase his house."

LONDON BUILDING ACTS APPROVAL OF HOLLOW FLOOR AND ROOF MATERIALS

The London County Council is empowered by Part III of the First Schedule to the London Building Acts (Amendment) Act, 1905, to approve from time to time any material as fire resisting other than those specified in the schedule. As regards floors and roofs, the materials specified are brick, terra-cotta or concrete not less than 5 in. in combination with iron and steel. Representations have been made to the Building Acts Committee that hollow floors and roofs constructed of other materials should be approved as fire resisting for the purposes of the Act, and the Committee are advised that, subject to the conditions mentioned, the use of such floors and roofs can safely be allowed. Mr. Topham Forrest writes that the following recommendation has been approved:—

That the Council, in pursuance of the powers conferred on it by the First Schedule (Part III) of the London Building Acts (Amendment) Act, 1905, do approve as fire resisting, in the case of hollow floors and hollow roofs, asbestos, brick, clay, cement mortar, or cement, concrete or terra-cotta, subject to the following conditions:— That all materials shall be to the satisfaction of the district surveyor, and the work of the work shall be executed to his satisfaction.

That if any blocks are of clay they shall be thoroughly burnt, free from lime and cracks and free from defects.

That all concrete which is less than 5 in. thick at any part, and all concrete for brick floors, shall be fine concrete, made in the proportion of at least one volume of Portland cement to three volumes of sand, composed of clean, silicious sand broken flint of all such sizes as will pass through a mesh of three-eighths of an inch measured in the clear.

That when such aggregate is not "fully clean," i.e., when such aggregate is not so fine in size that all voids can be filled with cement paste, then the proportions shall be not less than one volume of Portland cement to four volumes of aggregate.

That, in the case of hollow block floors, the ends of the blocks shall be solidly jointed with cement mortar in the proportions of one volume of Portland cement to two volumes of sharp sand.

That the concrete above the void shall be made in the same proportions as in the case of the floor.

That apart from any requirements in the First Schedule of imposed loads and working stresses:—(1) the least diameter of the main reinforcement shall be not less than three-eighths of an inch, (2) the least diameter of reinforcement (if any) shall be not less than three-sixteenths of an inch, and (3) the ends of all reinforcement shall be properly lapped to the satisfaction of the district surveyor.

That when burnt clay tiles are not used as a part of the covering of the reinforcement, the thickness of fine concrete (exclusive of any other material) covering the reinforcement shall be not less than three-quarters of an inch thick and not less than the diameter of such main tensile reinforcement.

That when burnt clay tiles are used as a part of the covering of the reinforcement, the thickness of fine concrete covering the reinforcement shall be not less than one-half of an inch, and not less than the diameter of such main tensile reinforcement, and the thickness of the tile shall be not less than one-half of an inch.

That the sides and undersides of steel beams and girders shall be protected from the action of fire by fine concrete at least 2 in. thick, rounded and rammed, or 1½ in. thick of round suitable mesh reinforcement, and that in all cases the concrete shall be

bedded solidly against the steel and there shall be no intervening cavity.

(xi) That fillets, strips and blocks of wood or other combustible materials shall not be embedded in the thickness of the fine concrete necessary—(1) to transmit stresses, (2) to provide protection to any steelwork or reinforcement, or (3) to comply with any of these conditions.

(xii) That when the material above the void is effectively arched or haunched the thickness of the material at the crown shall be not less than 2 in.

(xiii) That when the material above the void is not effectively arched or haunched the thickness of the material above the void shall be not less than (1) 2.0 in. in cases in which the width of the void is not more than 4 in.; (2) 2.5 in. in cases in which the width of the void is not more than 5 in.; (3) 3.0 in. in cases in which the width of the void is 6 in. and over.

(xiv) That the thickness of the soffit of the voids (exclusive of any plaster) shall be not less than three-quarters of an inch.

(xv) That the thickness of the material above the void added to the thickness of the soffit (exclusive of any plaster) shall be not less than 3 in.

(xvi) That the dimensions specified in the foregoing conditions shall refer only to questions of fire-resistance and resistance to impact during fires apart from any requirements in respect of imposed loads and working stresses under normal conditions of use.

Provided that this approval shall not in any way derogate from any of the powers of the Council, and shall not in any way affect the requirements of—(1) the London County Council (General Powers) Act, 1908, with respect to cubical extent of buildings; (2) the London County Council (General Powers) Act, 1909, with respect to the enclosure or encasing of pillars or girders with brickwork, terra-cotta, stone, tiles or other incombustible materials; and (3) the regulations made under the provisions of section 23 of the London County Council (General Powers) Act, 1909, with respect to the construction of buildings wholly or partly of reinforced concrete.

The Building Surveyors' Association.

A quarterly general meeting of this Association was held in the Council Chamber, Town Hall, Leeds, on Saturday, October 10. The first part of the day's programme was a visit to the modern clothing factory of Messrs. Montague Burton, Ltd., the party being conducted round the works by the architect, Mr. H. Wilson, of Leeds. The main outstanding features of the building are: One room without screens or divisions, where 3,000 persons are employed, and a dining-room with seating capacity for 2,000, and serving arrangements whereby this number can be supplied with a meal in eight minutes. Prior to the business meeting, Mr. F. E. Drury, M.Sc., Tech.E., Head of the Building Department, College of Technology, Manchester, gave a paper on "Practical Design and Checking of Reinforced Concrete Foundations."

The main feature of the business meeting was the classification of existing members. The manner in which the members accepted the committee's report showed that the work of classification has been carried out successfully. The hon. secretary reported a steady rise in the membership, this showing that building surveyors and inspectors were rallying to the support of an association whose objective was that of advancing the status of these two classes of municipal officers. From the organising secretary's report it was seen that educational bodies are making inquiries and framing courses of study suitable for students preparing themselves to sit at the Association's examination.

NEW BUILDINGS IN LONDON.

Baker-street.—A block of 12 flats is to be erected from the designs of Messrs. Burdwood & Mitchell, 80, George-street, Portman-square, W. The contractors are Messrs. Hammond & Barr, Ltd., 52, Beecham-place, S.W.3.

Battersea.—Excavations are being made in connection with the new factory in Park-road, S.W.11, for Messrs. Aplin & Barrett's Western County Creameries, Ltd. Messrs. Dove Bros., Ltd., general contractors, Clouesley-place, N.1. Mr. E. S. Underwood, F.R.I.B.A., architect and surveyor, 3, Queen-street, Cheap-side, E.C.

Bermondsey.—Plans have been prepared by Messrs. Butler's Wharf, Ltd., for a new warehouse. Messrs. G. Potton & Son, contractors, Gainsford-street, S.E.1.

Enfield.—Improvements, including a new electric lighting and power installation, are to be carried out at Enfield House, Chase Side-crescent, Enfield, under the supervision of Mr. E. Barrs, consulting engineer, 6, South-square, Gray's Inn, W.C.

Euston-road.—Steelwork is being erected by Messrs. Dorman, Long & Co., Ltd., Central Buildings, Westminster, S.W., for the new meeting house and central offices for the Society of Friends, in Euston-road, N.W.1. Messrs. Grace & Marsh, Ltd., general contractors, Waddon-street, Croydon. Mr. Hubert Lidbetter, A.R.I.B.A., architect, 12, Norfolk-street, W.C.2.

Ilford.—Mr. A. E. Symes, Carpenter's-road, Stratford, E., will shortly commence the building of a new church in Ilford-lane for the Baptist denomination, to plans prepared by Mr. H. Franklyn Murrell, A.R.I.B.A., 35, Bedford-row, W.C.1.

Kennington Oval.—Mr. A. H. Ryan Tenison, F.R.I.B.A., writes to point out that the rebuilding of Archbishop Tenison's Grammar School, somewhere in the neighbourhood of Kennington (referred to in our issue for October 2, under the above heading), is to be carried out from his designs. It is interesting to note that Mr. Tenison, who is the governors' architect, is descended from the Archbishop's brother in a direct line.

Kensington.—The Seventh Church of Christ Scientist is being erected on a site in Wright's-lane, W. Mr. G. H. Burgess, builder, 45, Berners-street. Steelwork by Messrs. Redpath, Brown & Co., Ltd., 3, Laurence Pountney hill, E.C.3.

Kensington.—The Ministry of Health has sanctioned the application of the Kensington Board of Guardians for permission to build a new nurses' home at St. Mary Abbott's Hospital, to provide accommodation for 54 beds for nurses, recreation facilities, and 10 bedrooms and dining-room for domestic staff.

Marlybone.—The last portion of a large housing scheme in Fisherton-street, N.W., consisting of three tenement blocks costing £48,968, is to be put in hand. The work will be carried out by Messrs. Walker & Slater, Ltd., Capland-street, N.W.8, under the direction of Messrs. H. V. Ashley & Winton Newman, 14, Gray's Inn-square, W.C.1.

Norbury.—Messrs. Thomas & Son, Elsmont, Bramley-avenue, Coudon, are to build a group of 28 houses on an estate on Norbury hill.

Norwood.—The L.C.C. have decided to spend £160,862 upon the development of their Blomfield estate, and the erection of flats and houses. Mr. G. Topham Forrest, F.R.I.B.A., architect, County Hall, S.E.1.

Paddington.—Among future proposals of the St. Pancras B.C. is the building of a public hall and library at the corner of Porchester-road, W.2. Mr. Herbert Shepherd, F.R.I.B.A., architect, 117, Queen's-road, W.2. The hall will accommodate 900 persons, whilst there will be five shops and a lending library, the total cost being £64,800.

Piccadilly.—Messrs. Citroen Cars, Ltd., Brook Green, W.6, will occupy a large area of the

ground floor of Devonshire House in Piccadilly, W.1, as showrooms and offices.

Piccadilly.—A large block of shops, show-rooms and flats is to be erected on the site of No. 80, Piccadilly, W. 1, and 1, Stratton-street, lately the residence of Lady Burdett Coutts. Particulars are in the hands of Messrs. John Wood & Co., surveyors, 6, Mount-street, W. 1.

Piccadilly.—It is proposed to build a block of bank and office premises on a site at the corner of Piccadilly and Albemarle-street, W. 1, to plans prepared by Mr. W. Curtis Green, A.R.A., 5, Pickering-place, S.W. 1.

Putney.—The foundation stone of the additions, chancel, sanctuary, north and south transepts, to the Church of St. Margaret, S.W. 15, has been laid. Mr. W. H. Forsyth, architect (Messrs. Forsyth & Maule), 12, Stratford-place, W. 1. Messrs. F. G. Minter, Ltd., contractors, Ferry Works, Putney, S.W. The cost is approximately £11,000.

Regent-street.—A new shop and showrooms are to be equipped in part of the ground floor frontage of the new Criterion Restaurant, in Regent-street, W. 1, for Messrs. Lillywhite's, Ltd., sports' outfitters, 31, Haymarket, S.W. 1.

Southwark.—The Church Council of St. George-the-Martyr, in the New Kent-road, S.E.1, propose to build a new church house to the design of Mr. J. Rawlinson, 11, Adam-street, Strand, W.C.

Strand.—New shops and offices are to be erected on a site in Villiers-street, W.C. 2, upon which previously stood the Villier's Cinema. Messrs. Henry Chapman & Co., surveyors, 2, Southampton-street, W.C. 2.

Strand.—The Vaudeville Theatre, W.C. 2, is shortly to be closed for entire reconstruction, to be carried out to the design of Mr. Robert Atkinson, F.R.I.B.A., 36, Bedford-square, W.C.1. The stage will be enlarged and the dress and upper circles rebuilt.

Tottenham Court-road.—Important building developments are imminent upon the completion of the negotiations for the purchase by the Beecham Trust, Ltd., 219, Strand, W.C. 2, of the site at the corner of Tottenham Court-road and New Oxford-street, W. 1. The area is about 2½ acres in extent, and includes the "Horseshoe" hotel, which, it is understood, will be rebuilt.

Tottenham Court-road.—Messrs. Oetzmann & Co., Ltd., Hampstead-road, N.W. 1, have purchased premises in Tottenham Court-road, W., where they propose to open an estate and house agency department.

Upper Baker-street.—With regard to the paragraph under this heading, which appeared in our issue for October 9, Messrs. Ernest Yates & Co. write to point out that they are not the architects for the work. They are estate and land agents, and an important part of their business is to formulate property development schemes, in regard to which they obtain the help of several well-known architects in the preparation of plans, &c.

Watford.—New heating and hot water supplies are to be installed in the new nurses' home at the Watford Institution in Vicarage-road. Mr. W. M. Blinny, consulting engineer, 38, Carlton-road, Putney, S.W.

Wembley.—A picture theatre is to be built in the High-street. Plans by Mr. Ernest G. W. Souster, F.R.I.B.A., 3, St. James's-street, S.W.1, acting on behalf of Mr. J. Morris, of the Harrow Coliseum.

Whitechapel.—Work is about to commence upon the building of the extension of the pathological department of the London Hospital, E. 1. Mr. J. G. Oatley, the hospital surveyor, is the architect. A new clinical theatre is also projected in the scheme.

Willesden.—The Indestructible Paint Co., Ltd., of King-street, E.C. 2, have purchased an area of land at Park Royal, N.W. 10, where they propose to build a large works.

Messrs. G. Godson & Son, 215, Kilburn-lane, W. 10, have been appointed to carry out the extension of the Willesden Hospital, in Harlesden-road, N.W., to the design of Messrs. Greenaway & Newberry, Parliament Mansions, Victoria-street, S.W. 1.

For rates of wages in the Building Trade in Scotland, see page 614

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, etc.

OCTOBER 26.—Clones.—OFFICES.—Offices, engine pits, &c., in reinforced concrete, at Clones Station, for the Great Northern Railway (Ireland), Co. J. B. Stephens, Secretary, Amiens-street Station, Dublin. Deposit £2 2s.

PROPOSED NEW BUILDINGS & OTHER WORKS.*

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

ASHBOURNE.—The U.D.C. has decided to proceed with the erection of twelve type "A" houses, and to apply for sanction from the M.H. to borrow £5,688 for the work.

BARNET.—The Governors of the Grammar School have received a letter from the C.C. stating that they had had a report from the B.E. with regard to the condition of the boys' school, and the Board's suggestion that it was advisable to obtain a site for the erection of a new school.

BARNSLY.—The Town Clerk of the C.B. has reported that the M.H. are prepared to sanction a loan of £2,500 for the purchase of land at Hunningley-lane, Ardsley, for the erection of houses.—Application is to be made to the M.H. for sanction to borrow the sum of £42,000 for the erection of 100 houses on the Pontefract-road site.—The C.B. has received formal application for sanction for the borrowing of money for the purchase of Bunkers Hill Farm for market and slaughterhouse purposes. Application is to be made to the M.H. for sanction to borrow the sum of £4,270 for the purchase.—The Highways Committee recommended that the Town Clerk be authorised to apply to the M.H. for sanction to a loan of £4,935, being the Corporation's share of the cost of the Beever Bridge.

BATFORD.—The Hertfordshire E.C. propose to erect a school to accommodate about 150 children.

BECKENHAM.—The U.D.C. are considering the question of extending housing activities on the Shortlands estate.—Alterations are to be carried out at the Bromley-road school at a cost of £1,200.—The electricity show rooms are to be altered at a cost of £250, and efforts are to be made to secure a site or premises for new offices and showrooms.—The Rectory estate is to be developed for building by Mr. J. R. Davies.

BECONTREE.—The L.C.C. recommend that, subject to the approval of the M.H., a site in Valence-avenue be sold to H.M. Postmaster-General for £1,000, for the erection of a post office.

BIRMINGHAM.—Efforts are being made to build a civic hall.

BLACKPOOL.—The C.B. has instructed the Borough Surveyor to report on Mr. E. D. Dennis, architect, submitting fees for services to be rendered in connection with the erection of houses on the Hoo Hill estate, and also sketch plans for the lay-out of the houses.—The Surveyor has been instructed to press forward the plans for Abbey-road School.—The C.B. resolved to recommend that the Finance Committee make application, through the B.E., to the M.H. for sanction to the borrowing of the requisite sum for the erection of Layton Junior School.

BOLTON.—The Corporation Housing Committee are to report as to the erection of further houses.—St. Mark's School is to be remodelled by the managers, whose plans have been approved by the E.C.

BRIDGWATER.—The T.C. has accepted a local tender of £15,550 for the erection of 31 parlour houses.

BRISTOL.—Blaise Castle is to be converted into a convalescent home.

BROADSTAIRS.—The railway station and its approaches are to be improved at a cost of £30,000.

BROMLEY.—The M.H. has sanctioned the borrowing by the T.C. of £25,000 for housing purposes.

CARLISLE.—The City Council has approved the purchase, at a cost of £10,000, of an estate of 93 acres at Newtown, for the building of houses.

CHELTEXHAM.—The Corporation has decided to construct an underground convenience at Long Garden, at a cost of £2,500.—The Corporation has approved of lay-out and plans of 14 houses, prepared by Mr. Malvern, to be erected on the Stanhope-street improvement area. Further plans are to be prepared for two-bedroomed houses. Plans passed: 60 houses, St. Marks, for the Corporation.

COLNE.—The M.H. held an inquiry into the application of the T.C. for approval of a preliminary statement of proposals for development in connection with the West Colne town-planning scheme.

CONISBOROUGH.—The U.D.C. decided to make application to the M.H. for sanction to borrow £34,493 for the purchase of land, street and sewerage works, and the erection of 60 houses.—The Public Works Loan Board are also to be applied to for the borrowing of £114,598 sanctioned for housing advances.

COWLEY.—The M.H. has given the R.D.C. sanction to build sixty houses, and the Council agreed that thirty should be put in hand as soon as possible.

DONCASTER.—The West Riding E.C. recommends that temporary accommodation be provided at the Grammar School, at a cost not exceeding £1,620 for buildings and £450 for equipment; they also recom-

ment that extensions be carried out to the Technical College, at an estimated cost of £20,000.—The E.C. are to build an open-air school to accommodate 240 children.

DUNGANNON.—An inquiry into applications on behalf of 97 labourers for cottages in the R.D. has been held by the Northern Ministry of Home Affairs.

EALING.—The T.C. passed plans for the laying out of five new roads, and the erection of 136 houses, by H. S. Smallwood & Co., Victoria-street, on the Argyle Park Estate, adjoining the Greenford-road and Castlebar Halt; 14 houses by W. Walkerdine, in Gunnersbury-lane; and 12 in an adjoining new road; 10 lock-up shops, by W. H. Read & Co., in Northfield-avenue; dairy and five flats by the Express Dairy Co., in The Mall and Northcote-avenue; and for the laying-out of new roads on the Gunnersbury Estate by A. Lyford.

EASTBOURNE.—The Corporation are inquiring the terms on which the Compton Estate will sell 110 acres at Horsey Bank Farm for housing, education, allotment and playing field purposes.—Tentative plans have been prepared by the borough engineer for the construction of a bathing pool at the Redoubt.—The provision of a convenient east of the Redoubt is being considered.—A bowling green is to be provided at Gildredge Park, at a cost of £1,200.

EAST HAM.—The parishioners of St. Paul's, Burgess-road, are hoping soon to embark upon the first part of the scheme for the erection of a permanent church. The scheme is expected to cost between £10,000 and £12,000. It is proposed to enlarge and beautify the present building, and to commence with the west front.

FOLESHELL.—The Exhall Sanitary Committee reported that the Surveyor had submitted a scheme for the sewerage and the sewage disposal of the principal parts of the parish. This was estimated to cost £37,414 5s. 4d. The R.D.C. decided that the plans should be completed.

FOLKESTONE.—The T.C. are to ask the M.H. to sanction a loan for the Chapel at the new cemetery. The Council is also considering the completion of drawings for the new cricket pavilion.—The T.C. resolved that a sub-committee be requested to consider further and report as to the construction of a bathing pool with a view to providing work for the unemployed.

FRIERN BARNET.—The M.H. has approved the proposal of the D.C. to erect 20 houses. The Council has decided to apply for a loan of £11,600 for the work.

GLASGOW.—The congregation of St. Anne's R.C. Church are raising funds for the proposed erection of a new church and parochial hall.

GODSTONE.—Housing sites are being obtained by the R.D.C. at Limsfield and Woldingham for housing schemes.

GRAVESEND.—The Electrical Engineer is to prepare a scheme for the provision of showrooms for the department.—Plans are to be prepared for conveniences in Echo-square and an underground convenience in Porrock-street.

GREASBOROUGH.—The U.D.C. has received sanction from the M.H. to borrow £1,650 for the purchase of the land comprising the Feoffees estate in Potter Hill for building purposes.

GRIMESTHORPE.—The Wesleyan Reform Chapel, Sheffield, has undertaken extension of premises to provide a large room for the primary department's use and three vestries. These extensions involve an expenditure of £2,500.

HATHERLEIGH.—The P.C. has decided to erect 20 houses.

HIGHTOWN (YORKS).—A site is being prepared for the erection of a new institute and Sunday schools at the Parish Church, including a scheme of electric lighting. The estimated cost is about £3,000.

HULL.—The E.C. has instructed the surveyor to prepare sketch plans of the school proposed to be laid out on the Cottesingham-road estate, and that application had been made to borrow the necessary money for the work. The Director of Education has recommended the erection of an infants' block, at the school.—Sanction to borrow £3,879 for the purchase of the site abutting on to the Ings-road, Sutton Ings, has been given by the M.H.

ILFORD.—Mr. S. Robinson has prepared a scheme for roads and sewers and erecting 250 houses on the Wanstead-lane estate.

JARROW.—The T.C. has approved plans for the erection of forty houses.

KINGSTOWN.—The U.D.C. has adopted a recommendation of their Construction Committee that a loan of £5,000 be raised for the erection of 25 houses.

KNARESBOROUGH.—The U.D.C. has resolved that tenders be invited for the erection of a shelter in Castle-grounds.

LEEDS.—A M.H. inquiry has been held into an application by the T.C. to borrow £17,800 for the provision of a public washhouse and slipper baths at Stocks Hill, Holbeck.—The T.C. passed various plans, including: W. Ripley, 16 semi-detached houses.—The M.H. has sanctioned a loan of £2,180 for the purchase of land at Wyther Park for the erection of an elementary school.—A loan of £55,000 has been sanctioned for road construction works.—A loan of £6,817 has been sanctioned for the erection of branch libraries at Bramley and Burley.—The Housing and Electricity Committees are considering the erection of 50 houses.—A central heating system is to be installed at the Hope Hospital.—Further buildings at Chapel-town barracks are to be converted into housing accommodation, at a cost of £1,050.

LETHBRIDGE.—Plans for the reconstruction and improvement of the lakes in Howard Park have been considered by the U.D.C., the estimated cost for the execution of these works being £1,571, and for the provision of a bandstand, £450.

LEYTON.—The D.C. has approved the cost of the acquisition of the land in Lea Bridge-road for housing and street improvement purposes, estimated at £10,740, of which £10,356 had been apportioned to housing and £384 to street improvements.—The Council has decided to make application to the M.H. for sanction

to a loan of £65,000 to cover the estimated cost of the construction of outfall sewer to connect with the London main drainage system.

LONDON.—The M.A.B. recommend that approval be given to the provision at the Western Hospital, at an estimated cost of £1,145, subject to the sanction of the M.H., of a cottage for the engineer.—The Board also recommend that approval be given to the provision at the Western Hospital, at an estimated cost of £410, subject to the sanction of the M.H., of an operating theatre in accordance with the plan prepared by the engineer-in-chief.

LONDON (BATTERSEA).—A site in Metior-street has been acquired by the L.C.C. for an elementary school. LONDON (HAMMERSMITH).—A site in Lena-gardens has been acquired by the L.C.C. for the erection of an elementary school.

LONDON (ISLINGTON).—The B.C. recommend that application be made to the Electricity Commissioners for sanction to the borrowing of the sum of £16,281 for electricity purposes.

LONDON (LFWISHAM).—The L.C.C. has decided to enlarge the Athelney-street and the Elfrida elementary schools.

LONDON (PUTNEY).—The Kingston-road, Putney, is to be widened, at a cost of £53,000.—The Parish Church is to be repaired at a cost of £3,000.

LONDON (STEPNEY).—The B.C. recommend that the Town Clerk make application to the L.C.C. for a loan of £33,000, for electricity works.—The Council are considering the question of erecting a tuberculosis hostel for women.—The Council has approved a letter from the Assistant Superintending Engineer to the Post Office Engineering Department on the subject of the construction of a special girder bridge over the Limehouse Cut for the purpose of carrying a telegraphic line over the Cut in connection with the works involved in the laying of telegraph lines along Burdett-road.

LONDON (WESTMINSTER).—The City Council recommend (a) that the Council make formal application to the M.H. for sanction to borrow in respect of the expenditure to be incurred for the purpose of the proposed rebuilding of the Marshall-street baths and washhouses, and (b) formal application to the L.C.C. for sanction to borrow in respect of the expenditure to be incurred for the purpose of the proposed rebuilding of the Highways Depot.—The Council recommend that application be made to the L.C.C. for sanction to the borrowing of £16,712 for the new building in Drury-lane.—The City Council recommend that the treatment of the forecourt at 199-203, Buckingham Palace-road in the manner proposed by Messrs. Waite & Waite and the removal of the approach wall as suggested be approved, subject to the conditions recommended by the City Engineer.—The Council has accepted tenders for the repaving of Ebury Bridge-road with wood blocks and asphalt over the existing granite setts on the south side of Lincoln's Inn-fields, and in Great Scotland-yard, and for extras and repairs after trenches, at the total estimated cost of £10,149 18s. 9d.

LUDDENDEN.—The B.C. has approved plans for alterations to the school, for the Luddenden Foot and Midgley E.C.

MANCHESTER.—The Corporation are considering a proposal for a town planning scheme.—A site at Chorlton Brook has been allocated to the E.C. for the erection of a school.—It is suggested that sites on the Anson and Clayton housing estates should be sold for the erection of licensed premises.—It is proposed to proceed forthwith with a portion of the Davyhulme sewage scheme by direct labour, at a cost of £83,000.—It is recommended that Platt Hall should be converted into a branch art library, the City Architect computing the cost of adaptation at £4,500.—A new shelter is to be constructed at a cost of £400 in Bogart Hole, Clough.—Refreshment kiosks are to be erected in four parks at a cost of £100 each.—A loan of £2,894 has been sanctioned for the erection of a practical instruction centre at Rusholme.

MATLOCK.—The U.D.C. approved a recommendation from the Housing Committee with regard to the housing scheme that the plans be modified so as to provide 10 houses at an aggregate cost of £5,780, and 12 at £6,684, and that application for a loan of £13,268 18s. to cover all costs in connection with the scheme be made.

NORTHUMBERLAND.—The E.C. has decided, subject to the approval of the C.C., to purchase six portable buildings, at a cost of £730 per building.

NOTTINGHAM.—The Estate Committee, has submitted four schemes and recommended the construction of a women's lavatory in Greyhound-street, at a cost of £10,600, and the extension of the existing convenience in St. Peter's Church side, at a cost of £400.—The erection of washing baths at the junction of St. Ann's Well-road and Northampton-street, at a cost of £5,950, has been approved.—Alterations to Aston Hall at a cost of £5,429, with £2,534 for fittings, were likewise approved.

OADBURY.—Arising out of an application for a subsidy to be granted in respect of 76 houses to be erected on a new street leading from Stoughton-road, the Ministry has given the U.D.C. sanction for the subsidy to be granted in respect of 100 additional houses. Plans were passed for erection of 20 cottages and a memorial hall on the Stoughton-road site.

OLLERTON.—The L. & N.E. Railway Co. has decided to construct a special railway siding from their Chesterfield to Lincoln line, to serve the new colliery which is being sunk by the Butterley Colliery Co.

PENISTONE.—The R.D.C. decided to make application to the M.H. for approval to a scheme of 40 additional houses.

PETERBOROUGH.—The M.H. has sanctioned the housing scheme for 28 houses at Walton.

PORTADOWN.—The T.C. has applied to the Northern Ministry of Home Affairs for a further loan of £10,000 to make advances for building houses.

PORTSLADE.—The U.D.C. adopted a report submitted by the Housing Committee with regard to a fresh lay-out plan of houses on the Sheldale-road site.

PORTSMOUTH.—An improvement is to be carried out at the Highland-road Bridge site, at a cost of £10,000. A site in Landguard-road is being acquired for ways depot. A further 200 houses are to be built. A committee has been appointed to go into the question of coast erosion. The M.H. has sanctioned a £45,000 for the Fratton-road widening. A site obtained for the erection of workshops for the Royal Navy.—The U.D.C. has recommended contracts to two firms for the building of 50 non-parlour houses on the Ooze Wood site.

ST. HELENS.—The Managers of the Wind school are proposing the erection of new school premises to accommodate 80 children.

SALFORD.—The sum of £2,750,000 is to be raised from Liverpool to Salford.

SCARBOROUGH.—The Town Council has approved an expenditure of £14,181 on the construction of a wall and roadway at the base of the cliff of the Cliff gardens on the South Bay.

SHAW.—New bank buildings are to be erected at the corner of St. Mary's Gate and Rochdale-road. Williams Deacon's Bank, Ltd.

SHEFFIELD.—The Rev. Dunford, of the Church at Hillsborough, has a scheme in hand for the building of a new church and extensions to the premises.

SHELF.—The M.H. has given formal sanction to the U.D.C. to borrow £3,231 and £155 for the erection of houses on the Shelf Hall-lane site.

SKEGNESS.—The M.H. has held an inquiry into the Council's application to borrow £32,753 for the construction of a bathing pool and orchestral platform on the foreshore.

SOUTH SHIELDS.—The Corporation has decided to erect a convenience at Ravensworth-terrace, at a cost of £225. The R.D.C. are negotiating with the Corporation for the acquisition of 15 acres at Clea for a housing scheme. A handicraft centre is to be built at the Mortimer-road school, at a cost of £1,400. The Clea Cleadon Park housing estate has been sanctioned for the erection of an elementary school. T. A. Page & Sons, on behalf of Mr. Milton Swales, prepared a scheme for the development of a housing estate at Cauldwell. The Corporation are to grant of £500 to the South Shields Institution Blind for a scheme for the provision of new work. A loan of £42,000 has been sanctioned for residential streets.

STOCKSBRIDGE.—The E.C. has approved tenders and estimates for the new school.

STOCKTON.—The T.C. has decided that the Local Engineer and Medical Officer present a report to the Health Committee giving an estimate of the cost of providing an abattoir.—The Council is to make application to the M.H. for sanction to borrow £8,650 for the erection of an open-air school at Norton.—The Local Engineer submitted an estimate of £30,000 for the construction of a subway, including retaining walls, the provision of a bridge in place of the St. level crossing.

STOKE-ON-TRENT.—Sanction to borrow £120,000 for a big scheme of gas centralisation is being sought by the City Council of the M.H.

STRATFORD-ON-AVON.—A report on the Guild by Mr. N. Jewson to the Society for the Preservation of Ancient Buildings was presented, and the Council was instructed to get an estimate for the reconstruction of the Chapel.

SUNBURY.—The Thames Conservancy Board decided to make a new lock, at a cost of £17,000, the land on the south and towpath side of the lock.

SWANAGE.—The U.D.C. passed plans: Lay Wall estate, for Messrs. Pond & Walton; 13 houses in the Old Mill estate, for J. Parsons; tea room and shop in Hillesa-road, for Miss Dawson.

TRETFORD.—The T.C. are considering the cost of additional accommodation at the Isolation Hospital.

TORQUAY.—Messrs. Vanstone & Son propose to build 300 houses on the Daison estate. Messrs. Wilkinson propose to build a large number of houses in the Barton district. A loan of £10,500 has been sought for the erection of 21 houses for housing displaced in the clearance schemes. Sanction is to be made for sanction for a further £5,000 in connection with the reconstruction of Quay.

TRURO.—The Corporation are seeking sanction to borrow a further sum of £4,000 for the completion of the work of converting and adapting old market buildings into a civic hall.—The Cornwall Territorial Association are purchasing a quarter-acre site for a Corporation at Hendra for the erection of a drill hall. Coast Lines, Ltd., are negotiating with the Corporation regarding the provision of new and improved accommodation on the Town Quay.—The Corporation are considering the possibilities of alterations to the City Hall annexe, so that it may be used for a public hall, the architect having reported that the extra cost would be about £600.

TYNEMOUTH.—The Housing Committee is considering schemes for providing accommodation for people by the erection of large three-story terrace buildings, and sites have been provisionally selected.

UXBRIDGE.—The M.H. has approved the application of the R.D.C. for sanction to a loan of £81,000 for works of sewerage and sewage disposal for the town of Uxbridge, Hillingdon East, and Ickenham.

WAKEFIELD.—The Corporation has decided to build 50 houses on the Lupset estate by departmental administration.—Plans for the extension of a maternity hospital are to be submitted to the Council, the cost being estimated at £5,000.—It is urged that a new bridge should be constructed in place of the old bridge.—A store shed is to be erected in place of the Old Bar House, Mantgates-lane, at a cost of £200.—The city engineer has prepared plans for a convenience at Westgate.—The city engineer has requested to prepare plans for the erection of a sale warehouse on the Market estate.

These prices apply to new buildings only. They cover superintendence by foreman and carry a profit of 10% on the prime cost without establishment charges. A percentage of 1 1/4 should be added for Employers' Liability and National Health and Unemployment Acts and from 1s. 6d. per £100 for Fire Insurance. The whole of the information given on this page is copyright.

TRADE NEWS

The Uni-Hygea Automatic Disinfecter.

Messrs. Uni-Hygea, Ltd., have sent us a leaflet illustrating their automatic disinfecter, cleanser, and deodoriser, and explaining its functions and principle. The makers claim that it is the simplest, most effective, and cheapest means of keeping w.c.s and urinals thoroughly disinfected, and, what is more, back up this statement by guaranteeing the Disinfecter for three years. It functions every time the w.c. is flushed, any desired quantity of disinfectant being discharged into the pan immediately after the flush; here it remains to carry out its work of decomposition of insanitary matter and fluid until the flush is used again. It is simple of construction, and entirely rust-proof. Its running costs amount to only a few pence a month, and it has the additional attraction of being British-made throughout. Particulars can be obtained from the firm's offices at 5, Crown-court, Chancery-lane, E.C.2.

Davis Gas Grates.

Gas fires are becoming increasingly popular nowadays owing to their supply of heat always being literally "on tap"; they are ready for any emergency or any sudden change of weather. They eliminate hard work in carrying coal, clearing ashes, or laying the fire; there is no waiting for the fire to burn up and no waste of fuel while it dies out. The Davis Gas Grate gives healthy radiant warmth—just as much as desired (for the degree of warmth is precisely adjustable), and for exactly so long as required. The burners are of a modern type, and are highly efficient and economical. In many cases they are "duplex," enabling either the whole or only part of the fire to be used, as desired. The "Peerless" designs, their premier production, are the Davis Series of the Gas Grates standardised by all the firms associated with Radiation, Ltd. Whilst preserving individuality in external design, they are composed of parts every one of which—namely, burner, injector, back, fire-brick, flue-outlet, &c.—size for size, is interchangeable, not only throughout the series itself, but also throughout the standardised grates made by all the associated companies.

"Longleys' " Wood Block Floors.

A polished wood block floor, besides being attractive in appearance, possesses high wear-resisting qualities. Shrinkage is a most important factor to be considered; the wood used by Messrs. Longley & Co., Ltd., is specially dried by a patent process which, they claim, completely ensures against any subsequent shrinkage. For thirty years, the "Longley's" Perfected Wood Block Flooring has been manufactured, and numbers of prominent architects, including Sir Edwin Lutyens, Sir Aston Webb, and Mr. H. Percy Adams, have specified it for various works. Production was arrested recently owing to a fire, but the firm has installed the latest machinery and are once more in a position to execute orders for block flooring in any kind of wood. Their pitch pine block floor averages 50 per cent. rift-sawn. When laying the floor, their men lay the rift-sawn blocks where the hardest wear is expected, and in this way customers have the benefit of a 100 per cent. rift-sawn block floor without having to pay an extra charge for the sorting and waste necessary to produce such a floor, although all rift-sawn blocks would be laid if required. A brochure containing all particulars will be supplied to architects and builders on application. Messrs. Longley, Ltd., do a large business as building contractors and joinery manufacturers, and have carried out many important building contracts, both public and private, during the last forty years.

Builders' Estates.

Mr. Frank Marland, contractor, of Grenville-street, Ashton-under-Lyne, who died recently, aged 66, left estate of the gross value of £20,905.

Mr. John Henry Iliffe, plumber, of Leicester, has left nett estate of £5,170.

Decorative Arts Exhibition.

The jury which had the duty of distributing the awards of merit among the exhibitors at the Decorative Arts Exhibition, Paris, has now concluded its work. The awards will be distributed on October 26.

Helping the London Boy.

Mr. J. J. Mallon, Warden of Toynbee Hall, 28, Commercial-street, London, E.1, writes that workers in the East End have long desired a wider provision for the needs of working boys. "Our desire," he says, "is likely soon to be realised, for the generosity of the Carnegie Trustees, Sir Ernest Benn, Mr. Thomas Wall, and others, has enabled us to obtain possession of an extensive building in Bower-street, Stepney." Much money will be needed to complete the undertaking, and an appeal for funds will be made in due time. For the present, however, Mr. Mallon asks for the sympathy and co-operation of particular members of the community, namely, those who are able to help in the practical work of adapting the building to its new purpose. What is needed he indicates generally as follows: "The adaptation of the building involves very varied operations and supplies, including a moderate amount of constructional steel work, metal enclosure to large lift-well, iron grates, external fire escape staircase, small passenger and service lifts, sanitary

THE PRESERVATION OF ARCHITECTURAL MONUMENTS

THERE is, in our civilisation of to-day, an intelligent and widespread interest in the preservation of ancient edifices, ruins, and even mere traces of pre-existing structures which differentiates it from all previous periods. This appreciation of the work of our predecessors is also in striking contrast to the comparative indifference and lack of public interest in modern architecture which is a characteristic of our own times.

In the (so-called) "Dark Ages," and in the days of the Renaissance, this attitude of mind was unknown; the approved method of dealing with any ancient building which required repair, or which was judged to have outlived its usefulness, was to replace it by a new building or to make additions and alterations were considered requisite, in accordance with the ordinary building tradition of the day, and without any intention to copy or follow a previous mode or tradition which might be considered to be a living force.

When it was done, not in any spirit of iconoclastic destruction, but because it was the natural and ordinary way of satisfying the needs of a new generation; in the few cases where, in earlier times, the style of an earlier period was consciously preserved—for the completion of a cathedral or other important building—the result inevitably lacks something of the sincerity and simplicity of the earlier work, and becomes (as is too much the case in modern architecture), self-conscious, dull and lacking in vitality. And it is perhaps here that we find the key to the desire, common to all European nations, to preserve the architectural monuments of the past; the sincerity of this desire, the zeal and religious fervour of our ancestors is greatly appreciated as being a possession of artistic value of historical importance.

In the Middle Ages education (as we understand it to-day) did not exist, but, in its place, we can trace artistic instinct and feeling, confined to the monastic orders, religious bodies, and building guilds, while the majority of the population were ignorant, of child-like simplicity of faith, and no doubt in mental development to the state of the peasant of to-day. Emotions were primitive, society was divided into distinct and very widely separated classes, the destroying influence of industrialism had not eclipsed the sense of beauty which was to be found in the peasant's life as well as in the great noble's castle, or the churches and cathedrals, in the building of which all must have taken part.

It would seem, therefore, that the interest in the preservation of architectural monuments, which appeals so strongly to the educated man of our complex civilisation, is the result of this simple love of beauty; an unconscious revolt against the dull monotony of our industrial age and the unnecessary prevalent ugliness which distinguishes too many cities. The ancient monuments and architectural glories of our country which should be preserved is now an accepted commonplace, and, although it is so, the careful and excellent work undertaken of late years by the Office of Works at Fountains, Rievaulx and elsewhere does not receive the commendation it deserves. The work of such societies as the Ancient Monuments Society is, however, better known, as it depends upon voluntary subscription; but some note (given elsewhere in this issue), of the work recently carried out at Cockersand Abbey by a local branch of that society* may not be without interest to a wider circle than the subscribers.

It is a good example of the care expended on the tracing and recording of the remains of an ancient building, and one cannot help contrast this with the coincident public indifference to the preservation of many architectural monuments of less antiquity but of equal, if not greater, beauty and interest. It is not that a fine street of homogeneous design and

conception (with admirable perspective and a sense of scale and proportion which make it a thing of beauty), may be destroyed, but, almost daily, one hears of country towns where a fine street or market place is ruined by the destruction of some old building and its replacement by a monstrous shop front or red brick store.

In a small village in one of the home counties is a "green," which has, for many centuries, preserved the original charm and character of the English village. Recently, one of the old houses was acquired by a resident who, quite honestly, caring nothing for traditional beauty or old-world charm, transformed it into a blatant red brick modernity, distinguished from its charming neighbours by every defect in taste which our modern education provides. One cannot help feeling that in our democratic times such action as this should be prevented, and the artistic and historical treasures of our great past should be considered and preserved as being of value to the community.

In France (although the appreciation of the value of old buildings is confined to a relatively small section of the population) such "historical monuments" are rightly considered as national possessions and are, therefore, protected from destruction, alteration or "modernisation" by severe penalties, including heavy fines or imprisonment. The Commission of Historical Monuments is a branch of the Ministry of Public Instruction and Fine Arts under the supervision of the Under Secretary of State (Directeur des Beaux Arts), and is composed of distinguished architects in two classes, *Inspecteurs Généraux* and *Architectes en Chef*. Each of the *Architectes en Chef* is responsible to the Commission for the preservation of all historical monuments scheduled in a County (*Département*) or, in some cases, in more than one *Département*. Under his direction are a certain number of "*architectes ordinaires*," selected by examination, and who are resident in one or other of the towns where important scheduled buildings exist. Their duties are to inform the *Architecte en Chef* of any possible danger to ancient buildings in their districts and to supervise works of repair, &c., sanctioned by the Commission and ordered by the *Architecte en Chef*. The *Inspecteurs-Généraux* are, as their title indicates, appointed by the Ministry to supervise and inspect all works undertaken in certain districts.

An example of the functioning of this organisation is afforded by a case which recently occurred in a big seaport town in the south, where a whole block of houses of architectural and historical importance was scheduled by the Commission and the owner was warned that any alterations must be approved by the *Architecte en Chef* and be carried out in strict accordance with his plans, the penalty for infringement (a heavy fine or term of imprisonment) being notified at the same time. In consequence of this timely and energetic action the old buildings remain untouched.

In another case the reconstruction of a scheduled church, at Laon, half of which had been destroyed by shell fire, was being inspected by the *Architecte en Chef* when the Curé asked whether some fine old eighteenth-century stalls and panelling in the choir of the church (which had escaped damage) could not be altered or in part removed to provide for a new organ, but the architect informed the Curé that the panelling and choir stalls were included in the schedule and could not therefore be touched without his sanction and approval.

These two instances are certainly instructive: they illustrate the necessity (in any form of preservation of existing buildings) of devising a scheme which is sufficiently rapid in execution to deal with urgent cases. This is the more necessary, because in the majority of instances the work of destruction is not undertaken after a long period of consideration, but is immediately started when some owner, whose business needs or personal requirements do not coincide with the preservation of those irreplaceable architectural treasures, commences that work of destruction which is gradually transforming the character and charm of our towns, villages and countryside.

Ancient Monuments Society. Cockersand Abbey Exploration Committee. Second Report and Appeal for Funds. H. J. & Co., Manchester. 1925.

NOTES.

Waterloo Bridge.

THE following letter, which the President of the Royal Institute of British Architects has received from Mr. D. Everett Waid, the President of the American Institute of Architects, will be read with pleasure by all who are concerned in the preservation of Waterloo Bridge: "The ancient and beautiful Waterloo Bridge across the Thames," says the writer, "possesses historic and artistic attributes of interest to other nations as well as to Great Britain. Please accept that fact as excuse for this address. On behalf of the American Institute of Architects, I beg to express to the Royal Institute of British Architects the hope that some means may be found to preserve from destruction this truly national monument."

Architecture and the Public.

WE expect interest and amusement from the remarks of Mr. G. K. Chesterton on almost any subject, and at the opening of the Architecture Club Exhibition, the austerities of architectural art proved no hindrance to his jocularity. The Chairman remarked that if he had not built columns he had filled many, and the versatile and gifted writer himself suggested buildings as symbols of fancy dress, evidently with an eye on the Albert Hall for himself. But it would have been of great interest and perhaps value to the profession if some thoughtful and observant criticism on our new buildings had been brought forward by the cultured layman, so that we might

see how far the ideals and aspirations of architects appeal to the public.

The Royal Artillery Memorial.

MANY will sympathise with a letter to *The Times* in which the writer criticises the stone howitzer as a symbol that seems "to bring thoughts of vengeance utterly alien to the atmosphere of world peace that all nations are endeavouring to create." Those who agree with this misgiving feel that such a monument cannot be judged solely as a work of art. They claim that it symbolises the power and domination of the gun rather than the self-sacrifice of those who laid down their lives in serving the gun in the hope that they might end its dominance in the world. The two ideals are antagonistic, and there can be little question as to which deserves commemoration.

THERE is a somewhat surprising answer to criticisms advanced against the form of the Artillery Memorial, which is to the effect that the Artillery only are concerned with its character, that it is a memorial to their own men, and that if they like it, it is no affair of the public outside their ranks. Without entering into the merits of the memorial itself, such a view is so debatable that it is worth while to examine it in its bearing on art and the national life. That the Army is only representative of the Army, for which the nation pays, and that the nation is not concerned with the memorial for which it provides the site, will hardly be accepted. These are national affairs in which we are all concerned. But it also jeopardises the permanence of the

memorial itself. What the Artillery might appear to a later time very able, for it is generally recognised where time has dimmed the memories, regard is felt more for the character of the monument itself than for what it commemorates. Such a view includes the better view that it is what we like, but what is desirable, may like what is bad, which a later time will remove. So that for the security of our memorials it can be left to undisciplined choice lest we lose our own object. We render more homage to the dead when we put their minds above imitative experience in mud and blood, into the sphere of art, and in doing so we shall give security to our national monuments. But we are far from understanding that the artist is required not merely to execute our own, perhaps unattainable desires, but to illuminate and exalt

A Willett Memorial.

THE suggestion that an able memorial should be erected to Mr. Willett will certainly be of interest to the public. There are probably instances in history of a man who has preferred so widespread a benefit upon his own kind who was himself so little known. Had it not been for the war, it is conceivable that his suggestion for "light saving" would have gone unheeded, of so many other apparently brilliant fancies that cause a moment's sensation and are then forgotten. A queen, it certainly was, repugnant alike to common sense, but it has been that reason and common sense are a reliable and even dangerous guide. A man more surely deserved a memorial not only to remind future generations and foreign visitors of the debt owed by the greater part of Europe, but to introduce his name to his contemporaries, most of whom are unaware of his work or existence.

TRAFALGAR Day passes the usual floral tributes. Nelson's memory is commemorated in a square. A temporary signalised the occasion by a cartoon representing the column by its shaft, with its capital resting upon a base, and surmounted by the statue with the comment, "One of the 'cuts' that we don't want to see erected by the Cabinet Committee on Education." We should certainly not see any mutilation of the column, but the cartoon serves to emphasise the folly of erecting on such a site a statue that it cannot be properly seen. A bright sky forms the worst conceivable background for so much of it as is visible. Too often have human figures been employed as terminals upon buildings, even by talented architects, who have thus shown their imperfect appreciation of sculpture and of its proper place in architecture.

GENERAL NEWS

Partnership.

Mr. A. H. Kersey, F.R.I.B.A., F.S.I., has taken into partnership Mr. George Alexander Gale, architect, and Mr. William George Fraser Spooner, surveyor. The practice will in future be carried on under the title of Kersey, Gale and Spooner, at 91, Moorgate, London, E.C.2. Tel.: Central 4412.

Retirement.

Mr. J. A. Williamson, A.R.I.B.A., has retired from the position of architect of Edinburgh City Council.

The English Bridge, Shrewsbury.

The third arch of the English Bridge, in Shrewsbury, which is undergoing reconstruction, recently collapsed owing to the pressure of the flooded river.

Kitchener Memorial.

Lord Kitchener's statue, the national memorial for which the House of Commons voted a sum after the war, is to be unveiled in the Horse Guards' Parade next spring. Mr. John Tweed is the sculptor.

Birmingham Art Gallery.

The Birmingham Museum and Art Gallery Committee has accepted a gift of a water-colour drawing, "Ypres," by Mr. J. A. Swan, F.R.I.B.A.

Glasgow School of Art.

At the annual meeting of the Governors of the Glasgow School of Art, the resignation of Sir John J. Burnet, R.A., F.R.I.B.A., vice-chairman, after thirty-four years of service, was announced.

An Appointment.

Mr. Philip S. Hudson, A.R.I.B.A., has resigned his position with the Willesden District Council on his appointment as Assistant Architect in the Public Works Department, Shanghai.

The Building Trade.

Returns have been received from 138 local authorities in Great Britain, showing that the estimated cost of buildings for which plans were passed during the third quarter of 1925 was £13,639,800.

Bridgewater-square.

The Corporation of the City of London recently expressed their inability to comply with the suggestion of the Metropolitan Public Gardens Association to purchase Bridgewater-square, Barbican, as an open space for the permanent use of the public.

Gunnersbury Park.

Acton Town Council has associated itself with the Ealing Town Council in raising a loan for the purchase of Gunnersbury Park for public pleasure and sports grounds. Ealing's share of the joint liability will be £51,070, and Acton's £45,342.

Lambeth Palace.

A number of Churchmen have recently combined to contribute a large sum of money for the purpose of securing for ever to the Church of England some of the historic furniture at Lambeth Palace. Much of it dates from 1633.

Eton's Tapestries.

The second of the tapestries, designed by the Hon. Mrs. Akers Douglas, and woven at the Morris works at Merton Abbey, has been put in its place in Eton Lower Chapel. The third tapestry is more than half finished, and the fourth and last will be put in hand shortly.

Gloucester Town Planning.

At a recent conference at Gloucester, presided over by Mr. G. L. Pepler, it was decided to form a committee to consider and report on the scheme of town-planning outlined by the Inspector, who suggests that the core of Gloucester should be preserved intact and that round it should be made a ring road boulevard.

Perth Church Restoration.

At a recent meeting at Perth of St. John's Church Restoration and County War Memorial Committee, reports by Sir Robert Lorimer on the progress of the work were submitted. He hopes to be able to inform the Committee at

their next meeting of the probable date of the reopening of the restored church and dedication of the war memorial.

New L.C.C. Schools.

The current three years' building programme of the London County Council Education Committee provides for the completion of 13,744 new places and enlargements. Out of forty-three sites required, twenty-seven are clear and available for building on at short notice. Four of the remaining sixteen sites have been purchased.

Town Planning.

Mr. R. A. Hudson recently read a paper before the Junior Institution of Engineers on the subject of "Town Planning: Its Effect and Influence on Industry." Beginning with an historical review of the growth of towns all over the world, the lecturer came to a practical discussion of the demands of industry in connection with the development of new areas and improvement of existing ones. The principal demands were for suitable transport facilities, systematic erection of buildings, and adequate supply services. Mr. Hudson then gave a short account of the purpose of the Town-Planning Acts, and by means of examples and maps illustrated the types of town-planning schemes which were actively being brought into operation at the present time. The lecturer suggested, in conclusion, that an early knowledge of the tentative proposals promoted by a town-planning authority was advisable, and that a scheme given full support and co-operation would prove of material benefit to everyone.

MESSRS. FORSYTH & MAULE, F.R.I.B.A., Architects.

COMPETITION

Reconstruction of the Mosque of Cairo.

Members of the Royal Institute considering taking part in this competition strongly recommended to consult the R.I.B.A., before deciding to compete.

Coventry and Warwickshire Hospital.

Messrs. T. R. J. Meakin & Son, of Birmingham, have been awarded a premium of £500 in this competition. There were ten competitors. The assessor was Mr. C. E. Bateman, F.R.I.B.A.

Designs for Middle-Class Houses: International Competition.

By the generosity of an American Willard Reed Messenger, engineer, New York, an international competition, with the object of promoting and facilitating the construction of houses for the smaller middle-class intellectual workers, is to be inaugurated. The prizes are: First, 500 dollars; second, 300 dollars; and third, 200 dollars. The competition is to be held under the auspices of the International Federation of Architects and Public Works. The jury will be composed of eleven members, representing various nationalities. Competitors will be required to submit sketches, descriptive particulars of construction, and schemes intended to reduce cost. Desirous of submitting designs should send them to the Director-General of the International Federation, 17, Avenue Carnot, Paris. Memorandum and sketches have to be sent not later than January 14 next. The results will be published before the end of 1926.

Competitions Open.

Newcastle Fire and Police Station. Premiums: £500, £300, £100. Mr. P. S. Worthington, F.R.I.B.A., Assessor.	June 1
Town Hall, Acc. Pretoria. Open to architects residing in South Africa or Registered under Architects' Act, of 1909, Transvaal. Assessor to be appointed by R.I.B.A. Premiums: £250, £150, £100.	—
Argentine Institute. Premiums 10,000, 6,000, 4,000, 3,000, 2,000 gold pesos. Apply particulars, 35, Old Queen-street, S.W.1	April 24
New Buildings for Liverpool College, Mossley Hill. Sir Giles Gilbert Scott, R.A., Assessor. Premiums: £500, £300 and £200. Apply to J. H. Lintern, Secretary, Liverpool College, Sefton Park-road, Liverpool.	Aug 7
Australian War Memorial, Canberra. Open to architects of Australian birth. Apply High Commissioner, Australia House, Strand, London	Aug. 16
Plan for construction of Conference Hall, for League of Nations, Geneva. International Competition, Sir John Burnet being British representative on Jury of Assessors. 100,000 Swiss francs to be divided among architects submitting best plans. Programmes will be deposited in due course with R.I.B.A., 9, Conduit-street, where intending competitors should apply. Single copies from Secretary-General, League of Nations, Geneva, on payment of 20 Swiss francs.	Jan. 2
*Portstewart Golf Club.....	—
*Carnegie Hall, Dingwall.....	—
*Fleetwood Hospital.....	—
*Parish Hall, Braunton.....	—
Art Gallery and Museum, Birkenhead. Limited to competitors practising within 20 miles of Birkenhead since January 1, 1923. Premiums: £250, £175, £100. Sir Robert Lorimer, A.R.A., assessor. £25s. deposit. Apply Curator, Central Public Library, Birkenhead.	Oct. 16
Model Dwellings, Russia.....	Sept. 4
*Proposed New School, Gosport	—
*Competitions when "warned" or voted by are starred.	—

Architecture Club Exhibition.

Royal Veterinary College, Camden Town, N.: Research Institute: Detail of Main Entrance.

Messrs. FORSYTH & MAULE, F.F.R.I.B.A., Architects.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

The Age We Live In.

SIR,—Never at any time in the history of building have so many books been written on the subject. We are told what to study and how we ought to study, but we are not instructed as to what constitutes good building. For years, the papers have reflected current views and opinions; there have been illustrations of every type of building exactly expressing the conditions of the time when it was projected, and just as exactly revealing the character of the artists responsible for the design.

I am sorry to find by the tone of the public press that the professional art critic has lately discovered that architecture is worthy of attention. This has led to some curious statements, purely gratuitous, and, moreover, couched in the arrogant terms usually employed by such gentry to describe the works of painters and sculptors. Far from assisting architects to a better understanding with the public, the literary matter that is now flooding the market intensifies the confusion. For example, it is possible for the layman to purchase a popular magazine, and after reading a few of the articles to proceed to act as his own architect. Another man picks up a book describing the buildings of the Far East, and promptly becomes enamoured of some exotic palace which he determines to reproduce.

For my own part, I wish most heartily that architects and builders would show more application and make greater efforts, either by study or research, to improve the tone of building in this country. The buildings which confront me during my perambulations in London, and other cities, appear cold and indifferent. In vain do I search for that touch of grace combined with delightful invention which is never absent from the buildings of other ages. The architecture of England has at all times been accessible to ideas which have with particular care been blended with national ideals. But the same cannot be said to be the case when recent buildings are under review. I am informed on good authority that America has solved the difficulty of correctly expressing her artistic needs by carrying ideas from the old world in order to found a tradition. Be this as it may, it appears a little illogical to a man of my temperament that English architects should be borrowing those ideas and using them at second-hand. Surely we, as a nation, have not so far forgotten our birthright that we are content to become helots in such matters. Another of my informants spoke of a mysterious "Northern Light," which is of the utmost value to a tired race. Then, again, I hear much talk of "Modernity," whatever that means; and I am distressed to find eminent people taking sides on the merits of this or that travesty of good taste in sculpture or painting.

If anyone would become a judge of the merits of a work of art, let him give the greatest inquiry into the spirit of the conditions that prompted the novelty. He will find, more often than not, that absurdity is hand in glove with a desire for notoriety. Of what use is it that domestic architecture has been advanced, when the architecture of commerce continues to show gestures and tricks which are beneath contempt? To make my point a little clearer, I will refer to a building in a prominent thoroughfare which was completed last year.

If nonsense accompanied by vulgarity imply the modern note, then this building most assuredly can claim distinction. The building belongs to no particular school of design; it has every feature known to architecture. There is no reason against the employment of these features, but when they are composed in an ill bred manner, their employment deserves censure. The man in the street when he sets out to enjoy architecture expects in a subconscious way to have a compliment paid to his fine sense.

Architects, I submit, do not, as a body, understand this act of courtesy. The building I have referred to fully illustrates the confusion that exists regarding modernity in building. We men in the street have very decided views upon offences against public taste. When we take our walks we expect to be instructed, not driven into acceptance of a meaningless essay in stone or concrete. In the case of shop premises and commercial buildings, we look for invention in its widest issues. We like to see how architect and client have worked together for the convenience of the buying public. Our eyes are accustomed to the scale of human beings, not of giants. Is it not burking the difficulty to erect a fantastic screen or show façade and to bedizen it with curious detail? What a contrast is afforded by the Bon Marché or the Printemps in Paris. There is another building in — but I will write about that in the distant future, when it is completed.

EDWARD MASSINGHAM WARBOYS.

The Penalty of Age.

SIR,—A few months ago London and the provinces were singing "Where do flies go in winter-time?" and it has occurred to me, where do the builders' assistants go when grey hairs make their appearance? According to the advertisement columns in your journal many who can afford it try their luck in advertising for appointments. They may get a reply and an interview. At an interview they are courteously received, the grey hair duly noted when the hat is removed, the references produced by the applicant are scanned—not read—and the applicants then bowed out by the interviewer with a promise "to let you know." Then the usual result. Grey hairs have lost. Many of the assistants have a good record, are experienced and know their work thoroughly.

The war or bankruptcy of firms has interfered with their business careers, and they are flung on the scrap heap. The writer knows of one or two good fellows who have been victims of circumstances as stated, and cannot get going. Their references are good and genuine. The men are hard-working; they would not rob their employers of "five minutes" or a "nail," and would use all their energies to forward the interests of any firm, but they are beaten by grey hairs. Why, I wonder?

"ACTIVE."

Registration of Architects.

SIR,—With reference to the chairman of the R.I.B.A. Registration Committee's letter appearing in your issue of the 23rd inst., I note he states that the pending legislation will not in any way affect anyone who at the time of passing of the Act is earning his living by the practice of architecture; but what of those living in retirement on the date of passing of the Act, and who desire to restart business again? There are hundreds of others who have never been in practice, having either held official appointments or been employed as draughtsmen. Are these people safeguarded against being shut out?

I think it highly desirable that non-members of societies should join up so that their interest may be protected, otherwise I fear they will find themselves on the other side of the fence in the event of the Bill becoming law.

NON-MEMBER.

R.I.B.A. Opening Meeting.

The new Session of the R.I.B.A. will be opened by a general meeting on Monday, November 2, at 8.30 p.m., when the President, Mr. E. Guy Dawber, F.S.A., will deliver his inaugural address; the portrait of the Past-President, Mr. J. Alfred Gotch, which has been painted by Mr. T. C. Gotch, will be unveiled and presented to the Royal Institute, and the R.I.B.A. Medal and Diploma for the best London building completed in 1924 will be presented to Messrs. Greenaway & Newberry for the new building of the Auctioneers' and Estate Agents' Institute in Lincoln's Inn Fields.

MATERIALS AND BRILLIANCE OF STYLE

A comprehensive glimpse of the building Northern Italy in the Renaissance period, of those of Pavia, Milan, and neighbouring cities was given in a lecture by Sir Banister Fletcher at the Central School of Arts and Crafts, Wednesday, October 21. Milan, said Sir Banister, when she had shaken off the influences which had prevailed in the Gothic period, soon reverted to the old Classical conditions which in Italy had always been dominant to the solidity and stateliness of design and the delicacy of conventional detail. The beautiful marble of Carrara made a new refinement possible; while in the valley of Lombardy the clay provided a brick architecture characteristic in its aspect, and the latter, too, itself to a grace of decorative detail which was dear to the Italian spirit. At the great Casian church of Certosa, at Pavia, the Gothic blended oddly with the brick Renaissance of the gorgeous west front, in which the vertical lines took the form of pilasters slender baluster columns.

Processional Staff in Silver and Enamel
Liverpool Cathedral.

MADE BY THE ARTIFICERS' GUILD.

ON Monday evening, Mr. H. S. GOODHART-DEL (President) occupied the chair at the meeting of the Architectural Association for the present session.

President's Address.

MESSRS. A. K. Parkinson, R. Walker, and J. Hobday having been elected members, the PRESIDENT delivered his inaugural address, entitled "Ourselves." It was, he said, the hope of many of them that the forthcoming year might see the beginning of changes which would increase the usefulness of the Association to its members. Those changes would consist in the extension not only of the premises but also of the facilities and privileges offered to members. It had been stated that the rapid development of the school had detracted the energy of the Council in the efforts it was bound to make to further the development of the Association as a whole, but he did not think that criticism could be justified. During the past two years the School had been overcrowded, and a choice was to be made between two policies—that of enlarging the buildings, or reducing the number of students admitted to the course. The latter policy must necessarily be retrograde, and the Council therefore had no alternative but to build. Whether they could only supply the bare necessities of the moment, or whether they would be able to provide for the growth they expected in the future would depend simply on how much money they could obtain. The only dangers which the School had at present were those which came from too much success, and he believed those dangers were well guarded against. Obviously there were imperfections in the training of the young architect; it was, for instance, extremely difficult to avoid a certain academicism in the teaching of building construction away from the job. But the system had come to stay, and sooner or later it would entirely replace the system of pupilage, and the comparative uniformity of training which would result from it would be a gain to English architecture as a whole. He did not think there was any danger that uniform training would make for uniform architecture to any harmful degree. A uniform practice of good theoretic design was all a school could teach. Light innovation could not be taught in school but out of it; but the capability of it, if it existed, could be encouraged and guided.

As the profession was constituted at present, the artistic and commercial elements had to be combined more or less in one man. Taken by itself, the commercial element was a perfectly honourable one, and there was no cause for saying that a man was not justified in becoming an architect with no intention but that of giving people who did not care

for art sound and useful buildings which made no pretension to art. As people fond of architecture, it was their business to question the necessity of anomalies found in its practice, even though they did not foresee the method of their cure. Architects could be divided into three classes: architects who were good at designing and liked doing it; architects who were bad at designing and liked doing it; and those who were bad at designing and were glad when they were relieved of it. In a free country those in the second class could not be interfered with; those in the third, which undoubtedly included many men of unimpeachable honesty and great ability on the practical side of the profession, ought to be rescued from the fancied obligation of either trying to do what they could not or of obtaining secret rather than open assistance. He did not know how the matter was managed in America, where the monster practices were, but he fancied the inevitable designing by proxy which such practices must involve was no mystery. The great bulk of such practices seemed to be the manufacture of architectural Robots out of dead bones from Europe, and it was possible that no individual designer was concerned in the process. However it was done, it must necessitate a kind of specialisation from which we could derive some useful lessons. Possibly the combination of small practices on an extensive scale might remedy many of their ills, for it was an ill that a large number of the bad buildings which lowered the average of architecture in England were designed by men who would not pretend to any special aptitude in that direction, but who had sufficient other aptitudes to give them a perfect right to practise as architects.

Most of them had not only a life to live, but a living to make. Of the irresponsible artist it was often said in justification that at any rate he lived his life, but more often than not he did it entirely at the expense of other people. In the present state of public appreciation of the arts, bad art was, as a rule, more marketable than good, and while that continued it was certainly an advantage to the artist not to be dependent upon his work for his house, his food, and his clothing. Given, however, the improvement in public taste which the idealist was bound to pre-suppose, it was extremely good for an artist to have a paymaster to please. In the great majority of cases the honest architect would find that he could gain most valuable stimulus and suggestion from the wishes of his employer. The first obligation on every artist was to do no bad work if he could help it, but he was under an equally stringent obligation of honour to do, if he could help it, no work which his employer disliked. Some people talked as though the man who paid for the building should be gagged and bound at the signing of the contract and not released until the architect had moved on to another job. That would have its conveniences, no doubt, but the architect would miss thereby a large part of his artistic education, of his education in resourcefulness, in open-mindedness, in alertness to opportunity.

An architect must not only live, but he must let live. Every architect had a right to say what he thought of the works of his confreres, provided he could not be suspected of getting any personal advantage from the expression of an unfavourable opinion. The public was so ignorant of the standards of architecture that architects must help them in the making or unmaking of reputations by free criticism. But they must regard that right as a great responsibility, and be very specially on their guard against any expression of tolerance, or of personal animus perhaps almost unsuspected by themselves. If, in self-examination, they thought there were a great many good architects, but all of them dead, it was better to reserve their opinions upon their contemporaries for a while, until they began to see a glimmer of merit in them which they could praise.

Discussion.

MR. J. ALAN SLATER said much of the value of the Association arose from the fact that no less than 75 per cent. of the members were old students of the School. He agreed that there must be more and more uniformity in the methods of architectural education throughout the country, and that would be helped by the fact that the Visiting Board of the R.I.B.A. Board of Architectural Education consisted of the same examiners for more than one year; they were thus able to see the work of all the schools and see how they varied from a standard such as that set by the Architectural Association. On the question of the combination of architectural practices, it was quite obvious that a man who specialised in domestic work would not be the best architect for a cathedral, no more than the man who could build a good factory would necessarily be the best man to design a house. To a certain extent the difficulty was already met by partnerships, and a combination of practices would only be a development of the partnership principle. During the R.I.B.A. Conference on architectural education a Danish architect had told him that in Denmark they endeavoured to specialise in the training of students for different branches of architecture.

MR. O. P. MILNE said they must all feel that the architect was in the position of the general who marshalled and governed the whole of the building operations, and that he was a better general if he had designed the building he was carrying out. He agreed that the school system had come to stay, and that the whole future of architecture was in the hands of the students.

MR. MANNING ROBERTSON said he was much interested in the suggestion that practices might be combined, not in a loose partnership but in a guild in which architects interested in housing and lay-outs would carry out that kind of work, those who specialised in factories and construction would do that work, church specialists would do the ecclesiastical work, and the man who was never happy unless dealing with ancient lights and party walls could have his paradise all to himself.

MR. E. SHEPPARD said in America the big architects did not really design or superintend their work, but they did get it. In America he thought the drawings were more studied, and that, contrary to the general opinion in this country, work was rather slower. As to competitions, there were some good perspective men in America, and that had a great influence on the result.

MR. H. M. FLETCHER said although uniformity was one of the aims of the Board of Architectural Education, they welcomed individuality. They would not like to see all the schools exactly alike. They would like all the schools to give thorough education in the subjects necessary to an architect, but they welcomed specialisation on the part of different schools.

MR. HOWARD ROBERTSON said members of the Association could greatly help the school by taking the students into their offices after they had completed their course; they already helped very much in that respect, but more should be done. The difficulty was to get office experience. The fault was not entirely with the architects, but with the students themselves, who left the school with a good knowledge of design and wanted to take over the designing work of his employer straight away. The students should remember that there was a market for architectural assistance, and a market value for their work. They should not expect a big salary to start with, and employers should make sure the students were suitable before employing them.

MR. GILBERT JENKINS said the whole of the energies of the Association should not be confined to the school. The older membership was a very important factor which should not be altogether ignored, and the club side should be kept going.

THE ARCHITECTURE CLUB EXHIBITION

OPENING CEREMONY.

THE third Exhibition of the Architecture Club was opened by Mr. G. K. Chesterton in the R.I.B.A. Galleries, Maddox-street, on Monday afternoon last.

Mr. J. C. Squire, President of the Club, who presided, thanked Mr. Chesterton for coming up from the country especially to open the exhibition. Mr. Chesterton, he continued, was not an architect, but he knew a lot about columns. Perhaps he (the speaker) might be allowed to describe those that Mr. Chesterton filled as being mostly of the Corinthian order.

Mr. Chesterton, in the course of a brief but witty speech, apologised for being a little late in arriving, and said the delay was entirely due to the London traffic blocks. He had imagined that it would have been quicker and easier to reach London by car, but there appeared to be springing up in London, as the latest development in architectural history, large villages or hamlets of stationary vehicles on wheels. They would probably soon see these groups of motor-cars, taxi-cabs, and omnibuses with ivy climbing up them and little gardens cultivated just outside them, together with everything else which betokened a normal and settled civilisation. That they would ever get on again he very much doubted. He would have got there much quicker had he walked and lost his way, as usual. It was true he was not an architect, and there were apparently others present who also were not architects. It would be a fine idea, he continued, if they could have a kind of festival, a sort of pageant or fancy dress procession, in which they could embody or represent different buildings. Someone would like to represent the graceful and gilded form of the Albert Memorial, and he would only be too delighted to stand opposite him permanently, being himself more of the conformation of the Albert Hall.

Mr. E. Guy Dawber, P.R.I.B.A., proposed a vote of thanks to Mr. Squire and Mr. Chesterton, which Mr. H. M. Fletcher seconded.

Mr. Squire, in reply, said the club was very grateful to the Institute for allowing that exhibition to be held in their galleries. What other professional body, he asked, would extend such a privilege to a body of laymen?

SOME NOTES ON THE EXHIBITION.

THE present exhibition is of a more modest nature than that held at Grosvenor House last year, and falls short of what has come to be expected of the Club. In the preface of the catalogue giving the names of the exhibitors, Mr. Charles Marriott asks: "What, glanced at broadly, does the exhibition represent?" and then explains: "It represents the choice of an unofficial body of professional architects and interested laymen from what they consider the better in contemporary building." This statement, coming from a distinguished art critic, may be thought authoritative; but can it be said that the exhibition is fully representative? And if it is not, what is the cause?

Of the grouping of the photographs and drawings there is little to say. Recent architecture occupies two of the galleries; there is an overflow in the corridor, and a few models and stray statues serve as furniture to a background of photographs. From the preliminary invitations, architects and the public were led to expect a good selection of rough sketches which for the first time would show the working of an architect's brain, but this section of the show is limited to twenty-five subjects of miscellaneous character. Every architect has his own process of developing a design, and there must be plenty of material to furnish a dozen exhibitions of this nature if the artists could be induced to comply, and we regret there are not more of these sketches, especially as architects are becoming rather tired of photographic displays, which mean a considerable expense to the practitioner and are not helpful to a full consideration of the subjects illustrated. And why are plans so religiously avoided?

In its general formation the exhibition has a certain modesty, which may arise from the process of weeding out undesirables, but one hoped to have been brought into touch with the poetry of modern building, instead of which the onlooker is shown a few studied perspectives and the photographs. There are very few designs of outstanding merit, though the selection has been wide and many familiar buildings have been included. As a special attraction, Mr. Harvey Corbett's proposed Restoration of King Solomon's Temple and Citadel, which is to be built in temporary materials for the Sesqui Centennial at Philadelphia, is on the central screen in the first gallery. This is a species of cinema attraction which appeared to us to have been worked up from Chipiez. The cost will be 2,000,000 dollars!

First the models must be mentioned. These range from the proposed cenotaph for Durban, which is surely intended as a compliment to Sir Edwin Lutyens, to models of houses and cottages. If there is one section of insular building of which we may be justly proud, it is the small house intended for the people. There are many designs of this character on the walls. Broadly speaking, the housing problem has raised the whole tone of vernacular building throughout the country. It is obvious, therefore, that questions of economy have led in turn to close study and good results. In the case of houses for the middle classes, such as those illustrated by the models, the garden lay-outs are pretty in their conceits of lily ponds, pergolas and what-nots; but the designs lack somewhat that urbanity which should make its own appeal. The model of the Plaza Theatre, Regent-street, now building, illustrates "Masks and Faces." The outside of the building recalls the style of the Second Empire, but there is no special indication of a theatre. The value of a model is here apparent, but it should have been placed at a much higher level. The building will be amongst the best of our modern theatres.

Among the good things on view, one noticed "Hatchford End," Cobham, by Mr. Goodhart-Rendel, west wing, excellent for its note of repose; a house on the Roehampton estate; and the Eton College Picture Gallery and Drawing School, by Messrs. Forsyth and Maule. Sir Giles Gilbert Scott, R.A., exhibits the fine new buildings at Clare College. Sir John Burnet & Partners head the "modernists" with Adelaide House, which gains considerably when photographed with London Bridge in the foreground. The showrooms and flats, High-street, Wandsworth, have been inspired direct from Holland. The studio for Mr. W. Reid Dick, A.R.A., is ingenious. In the same category can be placed the new building for Messrs. Austin Reed. Here is a building which aims at novelty on a novel site, and attempts to beggar its neighbours by sheer force. The design of "Little Salters," Beaulieu, by Mr. Horace Farnquarson is in the homely manner of Hampshire. There is one old familiar, the British Pavilion from the Paris Exhibition, which so palely reflects the northern light, and the well-planned Sports Pavilion of the City of London School (Ralph Knott and E. Stone Collins), which has much interest in its developed dimensions. There is a good brick house at Littlestone-on-Sea (Messrs. Adhead and Ramsey), and some convincing flats from the Duchy of Cornwall Estate. By far the most entertaining of the models is that concealed within a box raised on a pedestal; but surely the façade of Mr. Curtis Green's able London Life Association would have been better understood in the open! Other interesting exhibits are Mr. Oliver Hill's House in Argyllshire and Churt Gatehouse; Messrs. Blair, Imrie and Angell's several excellent houses with good variety of treatment; a pleasingly simple house at Kingswood by Mr.

Edwin T. Reynolds; Messrs. Forbes and Tate's interesting addition to Barrington Court; Messrs. Forsyth and Maule's Royal Veterinary College; Mr. Harold Gibbon's rich altar piece; Mr. Oswald P. Milne's domestic work; Mr. Ed. Maufe's five exhibits and various subjects by Messrs. Worthington Chas. Spooner, E. Vincent Harris, Walter Tapper. It has only been possible to touch on the general characteristics of the exhibition. There is, it is only fair to say, much work of good average merit, but this is best judged by the individual. The Architecture Club, in spite of its powerful backing, has not yet succeeded in effecting harmony between the arts. That the exhibition finds shelter at Conduit-street is, as Mr. Marriott states, "a sign that the Institute is satisfied that the activities of the Architecture Club are at least not prejudicial to the interests of the art for which the Institute is responsible."

It remains, however, to warn the promoters of the exhibition that their show is far from representing the current work of the day. And with this line of advice to guide the public, fresh opinions must be formed. What all is said and done, there are three hundred and six exhibits, and it is common knowledge that architects are numbered in the thousands. Surely such an exhibition might have brought to light more illuminating ideas.

"BEAUTY IN ARCHITECTURE"

Under the auspices of the South Wales Institute of Architects (Western Branch) a lecture was given recently by Mr. W. S. Purchon, M.A. A.R.I.B.A. (Head of the School of Architecture, Cardiff), on "Beauty in Architecture." Mr. H. C. Portsmouth, F.R.I.B.A., occupied the chair and a large number of local architects, students, and members of the general public interested in architecture attended. In the course of his remarks the lecturer enunciated the principles of architectural design and composition and put forward a scheme of architectural criticism applicable to the architecture of the past and present, the various points raised being considered in connection with a fine series of about 100 lantern views of famous ancient and modern buildings. Among other points dealt with was the expression of function and of the purpose of the building, composition of façade, the massing of buildings; grouping; environment; how unity of design may be achieved; lost; the art of "leaving out"; preservation scale. The lecturer further pointed out that architecture was not a matter of added expense to a building, the skilled designer producing in given conditions better results than the untrained man. A vote of thanks was proposed by Mr. Charles S. Thomas, F.R.I.B.A., and seconded by Mr. S. R. Crocker, L.R.I.B.A., and carried with acclamation. Mr. J. Herbert Jones, F.R.I.B.A., the Honorary Secretary, expressed on behalf of the Council their pleasure at a large number who attended the lecture, and expressed the hope that future lectures on the subject of architecture would be equally attended.

New Theological College, Cambridge.

A new post-graduate theological college known as Wesley House, has been opened in Jesus-lane, Cambridge. The building, designed by Sir Aston Webb, is of red brick with sparing use of Bath stone dressings and green tiles. The cost of the site was £18,000 and of the building about £42,000.

The British Industries Fair.

The eleventh British Industries Fair, held in London and Birmingham, from February 15 to 26, next year promises already in many ways to be the most successful of the series. Although forms of application for space have been in the hands of potential exhibitors a few days, over 100,000 sq. ft. of space already been applied for. The charge for has been reduced this year at both London and Birmingham, the charge in London is 2s. 6d. per sq. ft.

NORTHERN A.A. INAUGURAL ADDRESS

the course of his inaugural address to the Northern Architectural Association at New-
 upon-Tyne, on Wednesday, October 21,
 Reavell, F.R.I.B.A., President, referred
 the depressed condition of national affairs,
 direct consequence of the war, and urged
 we must devote all our energies toward
 in planning and construction, and
 it clear to all the world that the services
 keen and experienced architect are
 nothing worth retaining. While on the
 of work, he continued, he might perhaps
 allowed to say to his student friends that
 had adopted a hard and exacting pro-
 whose reward in most cases could only
 close and untiring effort. They suffered
 a new atmosphere, which placed far more
 on recreation and less on work than was
 case 50 years ago. Then, the home study
 serious and prolonged, and the interest in
 was betokened by hot discussions on the
 and animated criticisms on the plates in
 professional papers. Now the same papers
 are often very languidly turned over and our
 who did not worry about the styles, while an
 architect he knew who was remonstrating
 gently with a really gifted youth about wasted
 opportunities was told: "Well, you see, one
 must not neglect one's golf." His imagination
 was not equal to guessing the result of such
 play in his student time.

The outstanding event of the year, so far as
 we were concerned, had been the visit of the
 Royal Institute and Allied Societies to New-
 castle in July. There had been many successful
 meetings in the history of the Institute, but on
 this occasion it was willingly said that none sur-
 passed the meeting there. As President, he
 had officially congratulated on the organisation,
 hastened at once to pass on the encomium
 to those who so ably helped him.

The adoption by the City Council of the line
 of the proposed new street was a great event
 of the year. It must be a matter of satisfaction
 to that Association that the scheme of Mr.
 Dick had become virtually the official
 scheme. It was no easy matter to drive a new
 road through an ancient city, and doubtless
 many technical difficulties would arise to worry
 the City Engineer, but they were safe in his
 able hands. What did matter was that
 instead of legislating from hand to mouth,
 scattering away money by a few thousands here
 and another few thousands there, paring down
 expensive frontages and eventually being little
 better off, a comprehensive scheme had
 been adopted which would clear away a great
 deal of poor property, give a wide and direct
 thoroughfare from the new bridge to the North
 end, afford valuable business sites, and in the
 end add enormously to the rateable value of
 the city.

He would utter a word of warning concerning
 the circular, which no doubt most of them
 had received, purporting to establish "The
 Incorporated Association of Architects and
 Surveyors." The ostensible reason for the
 formation of the Association was to protect
 practitioners who were not members of the
 I.B.A. when legislation was asked for to
 obtain registration. They might take it from
 him that the R.I.B.A. would not ask for any-
 thing that did an injustice to anyone who had
 previously been making his living by archi-
 tecture or surveying, and they might be soundly
 assured that no British legislature would pass
 such a Bill.

During the year the discussion with the
 Quantity Surveyors and the Builders' Federation
 to Standard Measurement of Building Works
 had proceeded rather slowly in the hands of the
 joint sub-committee. While on that subject
 he would point out that, whatever system was
 adopted, those architects who took out their
 quantities should make it a point of honour
 to render them beyond reproach, avoiding
 vague clauses, loose description, excessive use
 of p.c. amounts and other faults of the idle or
 incompetent surveyor.

A pleasing incident during the year had been
 the election of their very popular member and
 past-President, Mr. T. R. Milburn, to a vice-
 presidency of the R.I.B.A. Mr. Milburn had
 a faculty for seeing the kernel of a subject under
 discussion very quickly, and the gift of express-
 ing his views thereon with point and lack of
 verbiage—valuable qualities that would be of
 great service to the profession in the exercise
 of his new dignity.

A matter that had been growing in interest
 during the last few years, particularly in the
 post-war period, was the training of young
 architects. The old system was for an aspirant
 to serve his articles with a practising architect,
 and it was a system that turned out a large
 number of good men. When the architect had
 a good sound practice, a good architectural
 library and a disposition to help and advise the
 pupil, and he on his part inclined to study and
 to burn a little of the midnight oil, the results
 were generally satisfactory but, alas! in many
 cases pupilage was undertaken with little sense
 of responsibility on either side, and at the end
 of it an unlucky youth was turned out to find
 that he was totally unqualified to undertake
 the duties of an architectural assistant. If we
 went in for academical training, we must keep
 in touch with the actual. If we got our heads
 in the air we must plant our feet on solid
 ground. Professor, principal and pupil alike
 must see that in the latter part of his training,
 the student had ample opportunity to familiarise
 himself with real buildings.

The last occurrence of the year had been the
 unveiling of the Memorial to those of their
 number who gave their lives for their country
 in the Great War. They knew their worth and
 appreciated their sacrifice, but beyond tendering
 the affectionate tribute of old colleagues he
 need not add to the words so fitly spoken at
 that afternoon's ceremony. On their behalf he
 congratulated Mr. Weightman on the success of
 his restrained and balanced design.

A hearty vote of thanks was accorded to the
 President on the motion of Mr. C. S. Errington,
 F.R.I.B.A., ex-President, seconded by Mr.
 T. R. Milburn, V.-P.R.I.B.A., ex-President. A
 number of other members also spoke.

EXHIBITION NOTES

THE ARCHITECTURAL ASSOCIATION.

THOSE who are interested in water-colour
 art should see the excellent collection of work
 brought together at the Architectural Associa-
 tion in Bedford-square. This is one of the best
 of these small exhibitions we remember. A few
 running notes on the drawings may interest
 our readers.

A grey drawing of Pump Court is by K. M.
 Wallis, and a nice careful study of a bit of the
 Orangery at Kensington by the same hand. A
 pleasant grey-green study of landscape by
 J. A. Hallam, a vigorous study of the rocky
 coast at Bude by A. C. Knapp Fisher, a Venetian
 impression by C. J. Kennedy; a nicely toned
 drawing of Passan-on-Danube, not impeccable
 as to perspective, by Thatem, and the same
 skilful handling of colour in the Beguinage,
 Bruges, are all noticeable things. North Rocks,
 Cornwall, by A. C. Knapp Fisher, is a boldly
 handled and vivid study; a clever purple and
 green landscape hangs above it, by A. S. Knott.
 There is another nameless landscape in brown
 and green, and a delightful little blue-grey
 landscape by H. M. R. Drury, a very telling
 sketch of Bourges by "E. G. D.," and also by
 the same hand a bright drawing of Gisors; the
 stairs, Canterbury, by Vincent Hooper, another
 fine study at Bude by Knapp Fisher, not
 inferior in some ways to D. Y. Cameron, and
 two fine photographic studies of Prague by
 F. R. Yerbury conclude our notes of an inter-
 esting exhibition.

WESSEX SOCIETY OF ARCHITECTS' INAUGURAL DINNER

THE members of the Wessex Society of Archi-
 tects (incorporating the Bristol Society of Archi-
 tects and the Gloucestershire Architectural Asso-
 ciation) inaugurated the new session by holding
 a dinner at Georges' Restaurant, Cheltenham,
 last week. The President of the Society (Mr.
 G. C. Lawrence) occupied the chair, and was
 supported by Mr. E. Guy Dawber (President of
 the R.I.B.A.), Sir George Oatley, Lieut.-Col. N.
 H. Waller (President of the Gloucestershire
 Architectural Association), Mr. F. B. Kirby
 (President of the Liverpool Society of Archi-
 tects), Mr. Ian MacAlister, Mr. F. W. Waller,
 and Major Stratton Davis (hon. secretary of the
 Society).

Before the company sat down, Col. Waller
 asked Mr. Dawber to invest Mr. G. C. Lawrence
 with the President's badge, which was designed
 by a Wessex architect, modelled by a Wessex
 sculptor, and cast in gold by a well-known firm
 at Frome.

Mr. Dawber, in making the investiture, said
 he looked upon their President as the real father
 of the Wessex Society. For a long time the
 Bristol Society had been affiliated to the Royal
 Institute, and they also had in Gloucestershire
 an Architectural Association which was not
 affiliated with either the Bristol Society or with
 the Institute; and it was owing to Mr.
 Lawrence's initiative and exertion that these
 two Societies were now amalgamated into one
 organisation called the Wessex Society of Archi-
 tects. On behalf of the Institute he wished
 their Society every possible success, and it gave
 him the greatest pleasure to invest Mr. Lawrence
 for the first time with his badge of office.

Col. Waller, in proposing "The Royal Institute
 of British Architects," said there was no doubt
 that the Institute was whole-hearted in its efforts
 to help the allied societies, and it had welcomed
 a number of the representatives of the allied
 societies on its governing body. The movement
 was still going on, and it behoved them to con-
 sider what was the objective to which they were
 aspiring. With all diffidence he suggested that
 it was an even closer liaison between the govern-
 ing body in London and the societies all over
 the country, each society dealing with its local
 problems, but looking to the Council of the
 Institute to lay down for them the strictest code
 of professional honour, and at the same time
 refereeing the difficult cases.

Mr. Dawber, replying, assured them that the
 Institute took the deepest interest in all its
 provincial and allied societies and cordially
 welcomed to its deliberations the representatives
 of those societies, one of the most helpful of
 whom at the Council meetings was the President
 of the Wessex Society, Mr. Lawrence. He (the
 speaker) happened to know Wessex. He had
 done work in all four counties, and had a fair
 knowledge of all the materials to be found in
 them; but above all his heart went out to the
 Cotswolds—it was there that he learnt what
 a sound, sensible English building was.

Mr. Ian MacAlister submitted the toast of
 "The Allied Societies." In 1908, he observed,
 there were 20 of these societies with members
 counted by hundreds; to-day the societies and
 branches numbered 60, and the membership
 was well into thousands, every part of the
 Empire being represented by a society or a
 branch.

Mr. E. B. Kirby, President of the Liverpool
 Architectural Society, replied.

Sir George Oatley proposed "The Visitors,"
 and Sir Philip Stott, Bart., responded. He said
 he looked forward to the time when the Institute
 would make the profession a close corporation.

Mr. Dawber said that the Institute had been
 preparing the ground for a Charter. A Regis-
 tration Bill had been drafted, and would shortly
 be sent to the allied societies for their considera-
 tion before it was laid before Parliament.

Mr. H. H. Hardy proposed "The Wessex
 Society of Architects," coupled with the name
 of Mr. G. C. Lawrence, who responded.

Military Buildings, Fort Canning, Singapore.

The scheme for replacing military buildings at Fort Canning, Singapore, rendered necessary by the construction of the service reservoir at the top of the Fort Canning Hill, is being undertaken by Captain S. D. Meadows, F.R.I.B.A., Chief Architect to the Municipality. The scheme includes seven large blocks, and is estimated to cost one million dollars. The blocks include headquarters' offices, warrant officers' quarters, soldiers' institute and barracks, married soldiers' quarters, &c. Most of the buildings sites are on the steep hillside in difficult positions from a building point of view, and a good deal of earth work and road work has thus been necessary. A new road is at present being made to serve the proposed buildings. The required building levels have not made it possible to cut far into the hillside, and the buildings are therefore to be supported on reinforced concrete piers taken down into solid laterite stratum. The work is being carried out under contract. The buildings are to be of reinforced concrete framework construction, with brick filling plastered over and French tiled roof. Timbers of Kapor will be used for carpentry and Chenghai for joinery work. A wide veranda around all offices and living quarters is a feature in the planning, and this, coupled with a simplicity of treatment, lends dignity to the design.

Sports Pavilion, Clifton College.

This pavilion, which is brick built and rendered with quoins and dressings contains, on the nominal ground floor, which is considerably raised above the level of the Close, a large central room or hall, with the cricket professionals' room at its eastern end, and a lobby and cloakroom admitting to the staircase and lavatories at the western end. Above this, and partly in the roof space, are the dressing-rooms for the school teams and for visiting teams, and lavatories and shower baths. The flooring of the ground and upper floors is in maple wood, over concrete, in order to avoid the splintering action of most other woods by spiked cricket shoes. In the basement are a garage for the motor lawn mower, storage room for goal-posts, cricket nets, &c., a heating chamber, a gas kitchen for the preparation of tea and coffee, &c., and lavatories. A hand-power lift connects this basement with the two upper floors. The ground is banked up in front of the building to form a turfed terrace, giving extra accommodation for persons watching matches. The general contractors were:—Messrs. J. Long & Sons, Ltd., of Bath. The principal sub-contractors were:—C. P. Kinnell & Co., Ltd., London, heating and hot water supplies; Dent & Hellyer, Ltd., lavatory ranges; H. Pontifex & Sons, Ltd., London, sanitary fittings; J. H. Pye, Moreton-on-Marsh, Glos., metal casements and glazing; F. Clubb & Son, Sudbury, Suffolk, w.i. balustrades and

grilles; Gardiner & Sons, Ltd., Bristol, hand-power lift and iron staircase; T. Elsley, Ltd., London, rain-water heads and pipes; T. E. Jago, London, modelling of date panels and coat-of-arms in special cement; The Silverdale Tileries Co., Stafford, roofing tiles; Adamite Co., Ltd., "Atlas White" Cement, quoins and dressings. The electric light installation was carried out by the Clifton College workshops.

Mr. Edward Warren, F.R.I.B.A., was the architect.

Sports Pavilion, Grove Park, Kent.

This sports pavilion—a photograph of which is included in the Architecture Club Exhibition—has been erected as a memorial to the Boys and Old Boys of the City of London School who gave their lives in the Great War. The building was designed by Messrs. Ralph Knott & E. Stone Collins, F.F.R.I.B.A., who are both Old Boys of the School. The contractors were Messrs. Arthur Vigor, Ltd. The figure studies for the decoration of the tea room, embodied in three framed sketches accompanying the two photographs sent for exhibition by Messrs. Knott & Collins, are by Mr. Steven Spurrier, R.O.I., who will execute the decorative panels in the tea room. Mr. Spurrier is also an Old Boy of the School.

Denham Golf Club House.

This building was originally an old farm, and some years ago was converted into a club house, the barn being utilised as a dining-room, stables formed into dressing-rooms, and additions made to form the outbuildings, &c., into one homogeneous block. Old oak, tiles, bricks, &c., obtained by the removal of another old barn belonging to the farm, were employed in the additions and renovations. The present illustration shows further contemplated additions and improvements, some portion of which has been carried out, but the whole scheme is subject at present to variation owing to expense. The general contractor was Mr. W. J. Page, of Northwood; heating was by Young, Austen & Young, Leicester and London; and lead lights, &c., by J. Binder, London.

Mr. Melville Seth-Ward, F.R.I.B.A., was the architect.

Guildhall, Conway, North Wales.

From pre-war days representations had been made by more than one County Court Judge that the accommodation provided in the Conway Guildhall buildings, put up some seventy years ago for both Judges' and the civic authorities' use, was in urgent need of improvement. A scheme was accordingly prepared for an entirely new building, and, although approved, had to be shelved through the war, and, unfortunately, for reasons of economy, had to be abandoned and a less expensive solution of the problem adopted by making use of the existing erection as far as possible, adding alongside a new court and subsidiary rooms to serve the dual requirements of Council and judges and magistrates. The site is adjacent to the ancient castle, and from local archives appears to have been continuously occupied by a Guildhall right on from the thirteenth century to the present day. The burgesses of Conway have been the proud possessors of a charter for over 600 years, Edward the First having granted it in 1284.

By absorbing all the available area of the restricted ground, adequate accommodation has been contrived to meet the increased requirements of the borough. The floor level, fixed by the former one, involved the flight of steps in the main approach, and another leading to the Judges' entrance and retiring rooms at the rear. Local stone of dark grey colour similar to the old building has been used for the walling, with Yorkshire stone for doors, windows and copings. The exigencies of cost compelled a simple treatment throughout, both exterior and interior; such enrichment as was allowable being confined to the public entrance, which carries the title "Guildhall" in carved letters with the ancient seal of "Conewey" above. The contract—about £6,000—is being carried out by Messrs. H. A. Clegg & Sons, of Chester, under the direction of Messrs. Douglas, Minshull & Muspratt, architects.

Wolverhampton Hospital Competition.

We publish this week the second preliminary design in the competition for a new Out-Patient and Casualty Department, Wolverhampton, Mr. W. Sydney Trent. The design placed first by Messrs. Elcock & Sutcliffe, was illustrated our last issue. We regret that owing to printer's error the estimated cost of the building was wrongly given. The correct amount is £45,578.

Workmen's Dwellings, Endell-street, London.

The new block of workmen's dwellings Short's-gardens, Endell-street, W.C., known as St. Giles's-buildings, has been erected by the Society for Improving the Condition of the Labouring Classes. The vacant site was purchased by the Society from the Holborn Borough Council for £5,500, and in addition to the workmen's dwellings a clinic has been built in connection with the Maternity and Child Welfare Committee of the Borough Council. The main building has been erected at a cost about £22,000, and the estimated cost of the clinic is about £2,750. The buildings will accommodate 140 persons, and consist of twenty-four flats. The largest of these (four in number) are of five rooms, and there are two of two rooms, and ten of three rooms. The builders were Messrs. Allen Fairhead & Sons, and the sub-contractors were as follows: Morden, Hayne & Co., Ltd., steelwork; Limm & Trinidad Lake Asphalt Co., Ltd., asphalt; Hardware Trading Co., sanitary fittings, bath &c.; Yannedis & Co., locks and door furniture; Malcolm McCloud & Co., artificial stone staircase; G. & F. May, hot-water installation; Gardener, Son & Co., escape stairs.

Architects were Messrs. Reeves, Son & Rance.

Architecture Club Exhibits.

Reproductions of a number of photographs which are now on exhibition at the R.I.B.A. Galleries, Maddox-street, are given in this issue. An article on the exhibition appears on page 626.

MEETINGS

FRIDAY, October 30.

Royal Sanitary Institute.—Mr. F. Wilkins on "Building Sites, Construction and Sanitary Planning." At 90, Buckingham Palace-road, S.W.1. 6 p.m.

Glasgow Architectural Craftsmen's Society.—Mr. J. Wilson Paterson on "The Preservation of Ancient Monuments." At the Royal Technical College. 7.45 p.m.

MONDAY, November 2.

Royal Institute of British Architects.—Inaugural Address by the President, Mr. E. G. Dawber, F.S.A. At 9, Conduit-street, W. 8.30 p.m.

Society of Engineers.—Mr. G. O. Case on "The Influence of Aggregates on the Strength and Properties of Concrete." At Burlington House, W.1. 5.30 p.m.

TUESDAY, November 3.

Society for the Promotion of Roman Studies.—Dr. R. E. M. Wheeler on "The Roman Fort Brecon and its Environs, 1925." At Burlington House, W.1. 4.30 p.m.

Institution of Civil Engineers.—Address by Sir W. H. Ellis, the President. At Gre George-street, S.W.1. 6 p.m.

WEDNESDAY, November 4.

Royal Archaeological Institute.—Mr. G. M. Rushforth on "The Painted Windows in the Chapel of the Wyne in Hampshire." At Burlington House, W.1. 5 p.m.

Institution of Sanitary Engineers.—Annual Dinner. At Holborn Restaurant.

THURSDAY, November 5.

Victoria and Albert Museum.—Mr. E. Millar on "English Thirteenth-Century Illuminated MSS." At South Kensington. 7 p.m.

Stepney Public Libraries.—Mr. W. J. Roff on "London's Dickensland." At 236, Cab street, E.1. 8 p.m.

Structural Engineers.—Presidential Address by Sir Charles T. Ruthen, O.B.E., F.R.I.B.A. At 296, Vauxhall Bridge-road, S.W.1. 7.30 p.m.

Plans of Golf Club House, Denham, Bucks.

ARCHITECTURE AND SCULPTURE AT THE GLASGOW INSTITUTE

By BENVENUTO BRUNELLESCHI.

"Every noble city has been a crystallisation of the contentment, pride and order of the community."—*Lethaby*.

"Self-expression is a human need that cannot be suppressed without a host of resultant disorders."—*Clutton-Brock*.

THE Royal Glasgow Institute is to be congratulated on reinstating architecture, after many years of neglect, to a definite position in its annual show. Mr. John Watson, F.R.I.B.A., who, we understand, is responsible for bringing together and hanging the architecture shown, is to be commended for his discrimination and tasteful arrangement. Although the architectural room is little more than 20 ft. square, one has only to mention that it contains one drawing by Mr. Walcot, three by Mr. Farey, three by Mr. Bucknell, and one by Mr. Bradshaw to realise that pictorially it cannot lack distinction. To say that "the man in the street" does not understand architecture as expressed by such drawings is to insult his intelligence, and if he can appreciate the architectural paintings of such men as Canaletto and Sargent (as he says he does) there can be no longer any excuse for the lack of interest in such work by the general public. It is certainly unfortunate that the Institute has curtailed the water-colour section to make room for this collection of architecture, and we feel that some of the space allotted might have been taken from the oil-painting section.

The place of honour in the architectural room has been awarded to Sir Herbert Baker's interior of the central dome of the Legislative Buildings at Imperial Delhi. This drawing, by Mr. Bucknell, shows a classical interior on somewhat Roman lines. The distribution of the mural decorations is particularly happy in composition, while the scale of the coffered dome is in perfect harmony with the lower order on the ground floor. The scale of the Indian-like band of enrichment round the drum of the dome might have been slightly increased to advantage.

Mr. A. N. Prentice shows two interiors from the new Orient liner "Orama"—the "Dining Room" and the "Smoke Room." They are on severe Classic lines, and although drawn with great skill, suffer somewhat by over-neatness in the handling of the water-colour. New premises, Doncaster, for Westminster Bank, by Messrs. Brierley & Rutherford, is a pleasing Ionic Renaissance façade, showing distinct Wren and Bryce influence. It is rendered in Mr. Walcot's usual facile and understanding manner. Such work shows that our sanest men are still carrying on the best elements of British Renaissance.

Messrs. Watson, Salmond & Gray show the extension to the Municipal Buildings, Glasgow—a fine drawing by Mr. Farey of an Ionic façade. The solidity of the design is somewhat marred, however, by the over-emphasis of the casements and astragals, while the blocking and attic seem somewhat heavy. The detail is certainly an improvement on Young's work. Messrs. Keppie & Henderson show the quadrant rebuilding at Glasgow Cross. This work carries on the best traditions of the firm and possesses that freshness of arrangement of Renaissance detail which we always find in the best modern Glasgow work.

Messrs. A. N. Paterson & Stoddart show a model of a Mausoleum in a private park somewhat reminiscent of a Chambers garden temple. Mr. James Millar exhibits a photograph of the interior of the great hall at the Institution of Civil Engineers, Westminster, S.W. It is on the lines of the Scottish Renaissance work by Bruce. In the photograph, the treatment of the ceiling and the ceiling decoration seems somewhat large in

scale for the wall pilaster treatment. In his Abbey Church at Fort Augustus, Mr. Reginald Fairlie has captured most successfully, in his free Romanesque interior, the monastic spirit, and his personal interpretation of Romanesque detail preserves that unity of scale which marks all his church work with such distinction. The incised coloured leatherwork of the Baldachino is a great success. Sir John Burnet, Son & Dick show six photographs of the Savings Bank, Glasgow, Bridgeton Cross Branch; New Baptistery, St. James's Church, Edinburgh; and the Hunter's Memorial, Glasgow University. The Bank is in Sir John's characteristic Burnetesque Renaissance manner. The screen in the Baptistery seems much too heavy in detail for the arcading of the church, and the Memorial, although fine in detail, suffers materially from the scale and detail of the background. The New Town Hall, Hamilton, by Messrs. Cullen, Lochhead & Brown, shows a Renaissance building of the "Belcher-Rickards" type. While possessing certain monumental qualities, it is somewhat lacking in unity of composition and the detail of the twin towers, as shown in the pen drawing, seems rather too small in scale. The Hull Cenotaph, by Mr. T. Harold Hughes, shown by photograph, is fine in detail but somewhat lacking in harmonious composition between the masonry and the bronze work. The sculpture group is rather energetic in treatment for the simple lines of the Cenotaph and other architectural detail.

In the Scottish Veterans' cottages at Callander, Messrs. Stewart & Paterson have captured the true spirit of Scottish domesticity, both in design and treatment of masonry. The firm has studied Queen Mary's Bath at Holyrood and Pepper Mill to some purpose. In the New Chancel, Helensburgh Parish Church, the same firm displays a scholarly understanding of Gothic, the scale of the detail being finely preserved throughout. The Norfolk and Devon Screen work has formed a sound basis of inspiration for the woodwork. Messrs. Falconer, Baker & Campbell, in the suggested New Wing to Great Rissington Manor, Glos., are true to the traditions of the Weldon, Northamptonshire, type of English Renaissance.

Greenock War Memorial, by Messrs. Wright & Wylie, shows the usual combination of architecture and sculpture. The detail seems rather lacking in scholarship and the bronze work rather spotty in effect. The new Zoology Buildings, Glasgow University, by Sir John Burnet, Son & Dick, lack unity in design. The curiously unbalanced nature of the composition is probably due to the necessities of the internal arrangements.

Two drawings are exhibited of the rebuilding of Warrington Church Training College at Childwall, Liverpool, by Mr. A. H. Moberly. The drawings are in water-colour by Mr. Bucknell. The close and regular repeat of the fenestration seems rather monotonous, but no doubt the question of expense has entered very largely into this problem, thereby depriving the designer of the opportunity of getting a truly collegiate feeling into the design. Mr. Bucknell's drawing of the South Front is an excellent piece of water-colour.

In Mr. Walter Tapper's Little Coates Church, Lincoln, we have a fine drawing in a cool grey scheme of colour by Mr. Farey. Hambros Bank, Bishopsgate, London, E.C., another drawing by Mr. Farey, shows a front in brick and stone. The Corinthian pilasters have no structural or organic meaning and are rather overpowered by the heavy double attic story. There is something of Wren's Winchester College Chapel feeling in this design.

Alterations and additions to Easthorpe Hall,

near Malton, by Messrs. Brierley & Rutherford, consist of a Renaissance front rendered by Mr. Bradshaw. The handling of the colour is fresh and sunny. The ironwork is distinctly reminiscent of the work at York Beverley.

At the end of the Print Room a few architectural drawings are found. Sir John Burnet, Son & Dick exhibit a sketch of additions to Forsyth's, Edinburgh, carried to harmonise with the original portion of work. In Sir John's earlier manner rather restless and overloaded with detail. Mr. Reginald Fairlie, in Kilmany House, Fife, gives an example of his domestic Colonial Dutch in feeling. Proposed Main Hall, Stroud, by Messrs. Falconer, Baker & Campbell, is a fine example of pencil draftsmanship in the detail of the entrance way. It is a strikingly original design, a curious blending of Babylonish and Egyptian elements.

Only two Edinburgh firms are represented in this exhibition—Mr. Reginald Fairlie and Mr. William Davidson—the latter by drawing of a large Celtic Cross which has been erected at Newton Don, Kelso, as a memorial to late Captain C. B. Balfour, C.B. In design the crude elements of Argyll Celtic have been so adapted as to give almost Classic appearance to this large

Sculpture.

In the Greek Anthology, Praxiteles' Niobe is given as saying: "From the life the artist made me into a stone, and from a stone Praxiteles wrought me into life." Such might be repeated before Mr. W. M'Millan's beautiful white marble quarter length figure of "Syrinx," which occupies the place of honour in the Sculpture Hall. Critics who wish that this figure had been a full length fail to perceive the plateness of the composition as rendered, the grace of the lines in the arms, the subtlety of the pose of the head, the soundness of the modelling, and the almost Greek-like pretension of the spirit of the subject make it one of the most outstanding works in the gallery.

Another work of great charm is Mrs. M. Gabriel's "The Song of Birds"—a drawing of a young girl looking skywards with an expression of wrapt ecstasy, most completely realised, as Mrs. Gabriel's work generally is. Mr. D. M'Gill shows "The Bathing," a realistic piece of work with fine lines. Benno Schotz's decorative portrait of Cecile Walton Robertson is a good piece, but technically the work is not completely realised, and the arrangement of the limbs in the right hand is not sculpturally treated, the flower being too decorative. "Reverie," a seated nude statuette by the same artist, is more finished in handling, better in construction. His portrait by the R.A. and the R.S.A. were stronger and sounder work. "Le Belier Retif," "Bacchante," by Mr. E. A. Bourdelle, saw at the last R.S.A. show. "Jane," by Mr. A. F. Hardman, is subtly and delicately modelled. "A Modern Madonna," by Mr. C. W. Tyson-Smith, is fine in quality of sculpture, but the expression rather suggestive of a Magdalene than a Madonna.

"Mehariste en Vedette," by M. E. Navellier, is a statuette of an Arab on a realistic in detail and feeling. "Memories," by Mrs. Hilda B. Marsden, a female bust, great subtlety of expression and good modelling. "The Imp," (bronze head of a child which is really impish and suggests a Hal in the round) is by Miss Erica M.

"Statuette" is by Mr. W. Reid. It is a seated nude, crisply modelled and composed. "The Challenge," a lion standing by Mr. Allan G. Wyon, is strongly modelled in a fine architectonic manner. "Sandal," by Miss Elizabeth A. Clapp, cleverly composed figure of a little girl on a sandal. "Aureola," by Mr. C. Jackson, is a fine piece of stone carving.

of the hair suggesting Roman work as at Naples Museum.

"Rumschisky," by Mr. W. Reid Dick, is a piece of portrait work. "Panther and Bone" is a characteristic work by Miss M. Bone, in which the treatment of the vulture solves a difficult problem in the composition. Mr. William Blanton's sketch for a garden figure is a balanced classically composed figure of

J. Epstein, in his head of "Rima," is to have been inspired by one of Michelangelo's angel heads in fresco. "Mrs. Rumschisky," by the same hand, is a strong piece of character study. Epstein's "Mr. R. B. Blanton-Graham" is a masterly portrait. "Petia," by Mr. Allan G. Wyon, is a fine study of a head. Mr. A. Proudfoot has a colossal head, fine in feeling but rather awkward in handling. "A Dryad of the Forest," by Mr. Richard Garbe, is subtle and effective in composition.

It seems unfortunate that several of the best Scottish sculptors are unrepresented in the Glasgow show, but no doubt they are well represented on larger work which could not conveniently be shown in this gallery. The position of sculpture in Europe to-day is not altogether hopeless as some critics would have us believe, and the best work in this gallery will find its place in the true line of traditional art.

TRANSPORT AND HOUSING

At the Housing Conference, which was held last week in Dublin, Mr. G. Topham Forrest, Director of the London County Council, read a paper on the subject of "Transport." In his paper, he said, during the last three years the question of transport was one which greatly exercised the minds of those who were responsible for the many thousands of houses which were being created in the outlying districts. The crowding of the city resulted in the fact that the majority of the people in the outskirts were ten miles from their work. Then a great number of people came in by train, and the suburban railways were packed to their fullest capacity. Extending a railway, or building of a new one, was a costly thing.

In New York, the enormous amount of transport carried out by private motor cars was a serious problem. There a great many of the working class owned their own cars—mechanics, bricklayers, &c. He did not say the cars were Rolls-Royces, but they served the purpose. But still the suburban railways were packed. It was evident that, as they increased the housing in the outskirts they increased the distance of the journey from their place of work. The relation of transport to housing was a most important one. The way they could deal with it was by widening the streets, but that was a very long and tedious process. In London they were doing it in some instances—Euston-road, Regent-street, &c. It was progressing slowly, and it was years and years before they really widened a street. There was the question of zoning. In London they had formed a Town-Planning Commission, which dealt with the unbuilt portions. They dealt with the position of factories with regard to houses. There was also the suggestion of going higher; they had heard about the skyscrapers. When he looked at the crowded streets of London, and remembered the thousands of people which these buildings held, he wondered if they were going to get the people away. They would have to house the workers within a reasonable distance from their work. In the building of these houses, they could go much further than at present, even to nine stories in height, with, of course, much wider spaces. It was hard to get people to go out from the city; they must be housed near their work. They had to rebuild and re-house the people in the slum areas. In rebuilding on the slum areas, they were sometimes able to re-house 50 per cent. of the former population.

It was in a great many of the big cities the green spaces were vanishing, and he was sorry to see that something ought to be done to save them.

COCKERSAND ABBEY

At a recent meeting of the Cockersand Abbey Exploration Committee, held at the Storey Institute, Lancaster (Alderman Briggs presiding), the complete programme of exploratory work contemplated was very carefully considered. The opinion was generally expressed that the Committee have now demonstrated that the remains of Cockersand Abbey are of sufficient importance to demand more complete exploration. When they made their first trial explorations on the site in 1923, the arrangement of the buildings and their extent were a matter of vague speculation. Last year the work was resumed in the latter part of the summer, and only discontinued when weather conditions became unfavourable. So far it has only been possible to carry on the work in a spasmodic manner as funds have become available. The Committee, however, believe that when the true significance of their discoveries is fully realised all needful funds will soon become available. They consider that, in view of the importance of the remains, they should wait until they have in hand a sum adequate to enable them to proceed with their work in an exhaustive and systematic manner. The Committee wish not merely to explore the site, but to protect the walls and other newly-discovered remains from injury. It is thought that the tops of most of the walls unearthed should be protected, by covering them with concrete. Other kinds of reparation are also contemplated. Donations are invited and should be forwarded to the Hon. Treasurers, Mr. W. G. Collingwood, M.A., F.S.A., President of the Cumberland and Westmorland Antiquarian and Archaeological Society, Lancaster, Coniston, Lancs., and to Mr. Alan T. S. Holt, M.C., Solicitor, 2, Booth-street, Manchester.

The House of St. Mary-of-the-Marsh at Cockersand, to which reference is made in our leading article, was founded in 1190 for Premonstratensian or White Canons and survived until the Dissolution in 1539. It stands in a picturesque situation, on the exposed lowland between the estuaries of the Lune and the Cocker, apparently separated in former times from the mainland by the quagmires of Thurnham Moss. A more secluded, romantic situation it would be difficult to imagine. The surrounding country and distant hills present a singularly pleasant prospect, but the few hawthorns on the site, bent almost parallel with the ground by the fury of the winds, afford some indication of the fierce gales that frequently sweep over the adjacent country. Probably no part of the Lancashire coast is so much exposed and so little frequented.

Masses of masonry and the footings of ruined walls are seen, covering more than three acres of ground, and among these the Early English Chapter House, preserved as a burial place of the Daltons of Thurnham, stands alone. Its interior is a fine piece of thirteenth-century work, with a remarkable vaulted roof in four quadripartite bays, supported by a central shafted column with well-carved foliated capitals. Owing to the historical importance of the Abbey, it has been scheduled for protection as a National Monument by the Ancient Monuments Board.

The income of the house at the Dissolution in 1539 entitled it to be included among the Greater Monasteries and was inferior only, in Lancashire, to the revenues of Furness and Whalley. The exquisitely carved canopied stalls of about A.D. 1340, now in Lancaster Parish Church, are sometimes stated to have been taken there from the Abbey Church at Cockersand in 1543.

The exploration of the site in 1924 proved that the ground was even richer in remains than had been anticipated. The arrangements of the Church and of all the apartments around the Cloister were largely determined, although a few points were not finally solved. Even those doubts, however, may be speedily removed when work comes to be resumed. Traces of a small chamber with a tiled floor were found on the west side of the South Transept. Professor

Hamilton Thompson considered that this apartment might have been the Library and Sacristy referred to by the Commissioners of Henry VIII, and Mr. Swarbrick suggests that possibly over it the Night Stairs to the Canons' Dormitory may have passed. The tiling of the floor of this chamber still remains *in situ*. Close by, in a position further to the east than was anticipated, the foundations of the Pulpitum were found. Mr. Swarbrick has observed the proximity of these indications to the large mass of foundations at the north-east corner of the South Transept, which has long aroused curiosity, and points out that it may form the base of the staircase which would give access to the top of the Pulpitum. It will be remembered that the pair of great organs, mentioned in the Inventory prepared by the Commissioners of Henry VIII, stood, it was stated, on the rood-loft. Professor Hamilton Thompson is of the opinion that the organ was most probably on the Pulpitum, judging by analogies elsewhere, and that the reference to the rood-loft in the Inventory is a very loose use of the term. Mr. Swarbrick, moreover, called attention to the presence of large blocks of millstone grit in this mass of foundations and observed that grit-stone only appears to occur in the later work at Cockersand, the earlier remains being entirely of red sandstone, which was doubtless more readily obtainable. It therefore seems that these foundations may belong to later constructions such as the Pulpitum staircase. Another detail of some significance is the presence of a straight joint, across the north wall of the Choir. The reason for this may become more clear when the exploration of the site is resumed. Traces of an entrance to the Lady Chapel were also found and also structural remains on the line of the wall that ran in a north-westerly direction from the Lady Chapel. Much may still remain to be unearthed in this quarter. Attention was, however, largely diverted from it last year by the discovery of the substantial foundations of an unknown structure on the south side of the site, adjacent to the massive drain of the Abbey. It was at first thought that this might be the rere-dortoir or a portion of the Infirmary building; but, in the course of his lecture at the Manchester University, Professor Hamilton Thompson stated that the southern foundations may have belonged to the Abbot's House, which, owing to the encroachments of the sea and gales, may have been transferred from the exposed west side to the more congenial south side of the site.

One of the most interesting views revealed by the excavations last year was the one through the south porch, across the cellarge of the Refectory, and through the opposite doorway, which admits to the Cloister. This portion of the remains will probably become even more interesting when the masses of earth that still encumber the cellarge have been removed. Across this chamber a considerable length of seamed lead pipe has been found, which appears to have conveyed the waste water from the Canons' Lavatory in the Cloister. The builders of mediæval abbeys were undoubtedly sanitarians.

Liverpool Health Report.

We have received the 1924 Report on the Health of the City of Liverpool, compiled by the Medical Officer of Health. We see from the Housing Section that Liverpool suffers from a serious shortage of houses; there are at present existing approximately 2,250 houses of the worst type, and 6,000 in a very bad state in regard to sanitary arrangements; 6,000 houses have been erected recently, and are now occupied, and contracts have been entered into for 3,206 further houses and 169 flats, but by the provision of these the Committee has not overtaken the arrears, and still less has it met the needs of the growing population. It is estimated that the natural shortage of dwellings within the city amounts to 8,000 to 10,000 houses.

LEGAL SECTION

NOTES ON CURRENT CASES

Breach of Covenant: Affixing Electric Advertisement.

THE case, *London County Council v. Hutter* (1925, 1 Ch. 626), raised a point which should be noted. The plaintiffs were the London County Council, successors in title of the original lessors, and the defendant was the successor in title of the original lessees of premises at the corner of Piccadilly and Shaftesbury-avenue, which had originally been leased from March, 1885, for a term of eighty years. The premises were used by the defendants as a restaurant, and they, without the consent of the plaintiffs, had installed on the facade of the building fronting both streets an electric light advertisement set in an iron framework, 75 ft. long and 10 ft. high, which ran round the whole frontage of the building, which had a rounded off corner at the junction of the two streets. This framework was bolted to and supported by twelve tee irons and eleven iron brackets cemented into holes cut in the stonework of the building, twenty-three holes having been cut for this purpose about 2½ in. square and 6 in. deep. The advertisement was not necessary for the plaintiff's business, but related to a make of gin and the defendant received payment for its display.

The action was brought for a declaration that the framework constituted a breach of the following covenant and for a mandatory order for its removal. The covenant was: "That the lessee, his executors, administrators, or assigns, will not during the said term, without the previous written consent of the lessors, their successors, or assigns, cut or maim any of the principal walls or timbers of the building . . . or commit or permit any waste or damage to the said building, or to the floors or timbers thereof, or make or permit to be made, any alteration in the elevation of the buildings, or in the architectural decoration thereof." In the judgment delivered in this case, this covenant was considered as divisible into three branches, thus (1) a covenant not to cut or maim any of the principal walls; (2) not to commit or permit waste or damage to the building or to the floors or timbers; and (3) not to make any alteration in the elevation or the architectural decoration.

The Court held that the cutting of the twenty-three holes was a breach of the first division of the covenant. If the framework of the design was unbolted and removed the tee pieces and brackets would remain as a permanent addition to the fabric of the building, unless cut out, and the cutting out would leave the stonework holed and deteriorated. What had been done would also, under the second division, amount to damage to the building, and the Court also held that, under the third division, there had been an alteration in the elevation and also in the architectural decoration, for one of the holes had been cut through the moulding round one of the windows in the architrave. The Court added that this "alteration" was not performed in connection with the ordinary user of the premises, and, therefore, did not fall within any such exception as that illustrated in the case *Bickmore v. Dimmer* (1903, 1 Ch. 156; *The Builder*, December 13, 1902).

In *Bickmore v. Dimmer*, the premises were being used by jewellers and clock makers, and they had affixed a large clock to the exterior of the building by means of bolts driven into the structure. The covenant in that case was "not to make or suffer any alteration" to the demised premises. The court of first instance had granted a mandatory injunction, but the Court of Appeal had set this aside on the ground that the word "alteration" in the covenant must be limited to alterations which would affect the form or structure of the building; but Lord Justice Stirling laid it down that there must be excepted from the covenant not only things absolutely essential to the carrying on of the business, but also things fixed on the pre-

misses for the purposes of carrying on the business in a reasonable ordinary, and proper way. The reason why the Court, in the case we are considering, held this dictum could not apply, because the sign was affixed to the premises for a purpose wholly extraneous to the business carried on by the lessees, but to enable the wall to be used as an advertising station.

Another case was distinguished by the Court in considering this third division of the covenant relating to the elevation and architectural decoration, *Joseph v. London County Council* (1914, *Weekly Notes*, 204). In that case the covenant was very similar to that in the case under consideration and the addition complained of was an electric light sign, but it was so attached to the building as not to affect the fabric at all. It is not stated in the report what was the nature of the business carried on on the premises, but from the context it appears that in that case the advertisement of whiskey, Bovril and Ginger Ale was connected with the business, and in that case the Court appears only to have referred to *Bickmore v. Dimmer* to point out the distinction in the covenant that, being a simple covenant not to make "any alteration," whereas in the case it was considering the covenant was a long compound covenant dealing with the preservation of the building. The decision turned upon whether there had been an alteration of the elevation or architectural decoration, and the Court held that an alteration in appearance did not infringe the covenant; there must be some alteration in the fabric of the building.

From a consideration of the above cases the deduction might possibly be drawn that even an alteration which affected the fabric of the building might not be held an "alteration of the elevation and architectural decoration," provided that it had been made for a purpose ordinarily necessary for the business carried on by the lessees, but we think that would be straining the effect of the decisions. *Bickmore v. Dimmer* has been acted upon as a general guide, but it must be remembered that, as we have pointed out above, the covenant in that case was a very limited covenant and the dictum as to things fixed to the building in the ordinary course of the business was that of only one of the members of the Court of Appeal. Lord Justice Cozens Hardy in the same case indicated that if, after entering into such a covenant, the covenantor, notwithstanding notice of objection by the covenantee, deliberately committed a breach of the covenant, a mandatory injunction should be granted provided there had been no laches on the part of the covenantee. If, therefore, the lessor of premises considers that the lessee is committing what he deems an obvious breach of covenant, he should at once give notice of objection to his lessee, but there is still the difficulty of determining what is a breach of the covenant. If the fabric is unaffected and the alteration will affect the appearance only, then both *Bickmore v. Dimmer* and *Joseph v. London County Council* show there is no ground for an injunction, but supposing the fabric to be seriously affected and yet the purpose for which the alteration is being made to be connected with the ordinary conduct of the business, what is the position then? We submit, but there appears no actual authority upon the point, that the real effect of *Bickmore v. Dimmer* would appear to be that if premises are let by a lessor for use in a particular business, any alteration that should reasonably have been within the contemplation of the parties could not be objected to under a covenant which only prohibits the "alteration" of the elevation or architectural decoration; but any alteration unusual in its character and serious to the fabric could be objected to. It would thus appear to be a question of fact to be determined whether the alteration was one which reasonable persons would contemplate or whether it went outside

those limits; but as we have said there is no definite authority upon this point.

Consents to Assignments.

In our Legal Section for June last the case *Houlder Brothers & Co. v. Gibson* at the time that note was written the judgment of the Court of Appeal had not been reported in the Law Reports, and we intimally should refer to the case again. The case is now reported, 1925, 1 Ch. 575.

It will be remembered that the plaintiffs were lessees of certain premises, and the premises contained a covenant by the lessees that they would not assign, sublet or part the premises of the premises, or any part thereof, without the consent of the lessors, "such consent to be withheld unreasonably in the case of a respectable and responsible person of good repute."

The plaintiffs desired to assign the premises to a firm who were in every way respectable and responsible, and the only objection to the assignment was that the firm were tenants of other property of his adjoining premises in question, and that if he consented to the assignment he would lose them as tenants. The Court below held that this was no reason for refusal, and this decision was affirmed by the Court of Appeal, but the case was put as to whether, as Counsel for the plaintiffs put it, the proviso to the covenant is in relation to whether it has to be construed with reference to the relationship between the parties of lord and tenant. That is to say, can the object because of some injury he anticipates to other property of his, or must there be a connection between the objection to the particular property the subject matter of the lease, or to the person to whom it is proposed to be assigned.

Counsel for the appellants, the lessors, contended there was no case directly in point. The Court of Appeal, in considering this question, agreed with the judgment delivered in the Court below that although the injury threatened and apprehended and made the ground for refusal by the lessor may be in respect of relation to other property of the lessor, the ground must arise either from the user of the demised property proposed or the personality of the proposed assignee.

In the Court of Appeal the case mainly turned upon the case of *Bates v. Donaldson* (1892, 2 Q.B. 241), as some reliance had been placed by the appellants, the lessors, on the judgment delivered in that case by Lord Justice Kay, passage relied upon being: "So I should not think there might be other reasons" (i.e., than the proposed user) "personal rather than the relation of the lord than the tenant which might justify refusal under the terms of this covenant." Lord Justice A. L. Smith, however, in the same case had put his judgment thus: "I am not in my opinion, the true reading of the clause that the permission can be withheld in order to enable the lessor to regain possession of the premises before the termination of the term. It was, in my judgment, inserted *intuitu* altogether, and in order to protect the lessor from having his premises used or occupied in an undesirable way or by an undesirable tenant or assignee." The Court of Appeal preferred the latter portion of this extract from the judgment of Lord Justice A. L. Smith to that of Lord Justice Kay, but the meaning is made absolutely clear by Lord Justice Warrington in the following passage:—

"The user of the property to be reasonably objectionable need not necessarily be objectionable to the lessor as lessor of that particular property. The user of the property may damage the lessor in other ways, and if it is then an objection to that user would be reasonable; but whichever way it is looked at, you must find in the objection some connection which connects it either with the person of the intended assignee suggested as the

nt of the property, or with the user which s likely to make of the property to be ned to him." The Lord Justice then trated his meaning by referring to the Governors of Bridewell Hospital v. Fawcner (times L.R. 637), a case relied upon by the rs in this case because what was there ehended was damage to the lessor in ect of other property of his. In that case proposed assignee was the General of the ation Army, but as the Lord Justice pointed the damage which was apprehended would resulted, if it resulted at all, in that case r from the personality of the proposed nee or from the user to which he was likely ut the property. There the refusal was onal rather to the landlord than to the nt, but it had reference to the user of the erty, and Lord Justice Warrington pointed that Lord Justice Kay in the judgment he erred in Bates v. Donaldson may have had a case in contemplation.

ne case is very important for it has cleared ubs and made it clear that the reason refusal of consent to an assignment must something affecting the subject matter of contract which forms the relationship een the landlord and tenant, and not as the case under consideration something ly extraneous to, and completely dissociated n, the subject matter of the contract.

LAW REPORTS

Building Material. Question of Trade Custom.

BEFORE his Honour Judge Alan Macpherson Ross County Court, an action was brought ntly by Charles E. Sutcliffe, a brewer, and r of the Barrel Brewery, Ross, against k Truscott, builder and contractor, for the rn of certain goods and effects, viz., a tank brass fittings, flagstones, etc., valued at 15s. the plaintiff further claiming 30s. ges for the detention of such goods.

r. Lionel Lane, of Gloucester, appeared the plaintiff, and Mr. Herbert Williams, onmouth, was for the defendant.

r. Lane, in opening the case, said the de- ant had to carry out certain alterations at Hostelrie Hotel, Goodrich, and in doing rried away a tank with brass fittings and ain flagstones which were taken up from kitchen floor and outside. Though re- ed requests had been made for the return ese goods, and promises made to do so by defendant, the articles were still retained im.

r. Williams said he might say at once his pce was that in accordance with the m well-known in the building trade these aterials, if not particularly specified for he terms of the contract, became the pro- y of the contractor.

r. Thomas Platts, of the Waverley Hotel, r, said he was tenant at the Hostelrie n the alterations were carried out. The en, from which the flagstones were re- ed, was 15 ft. by 30 ft. There were a few square yards of stone outside. flagstones were to be used in the path ing to the Old Castle roadway, and they e instructed to be taken into the orchard. ndant, however, took them into the road. spoke to Truscott about it, and defendant it was just as easy to take them round lane as through the garden. The flag- es were never taken into the orchard. He a man loading the stone up and he told to unload them, which the man did. They e taken away in his (Mr. Platt's) absence. valued the stones at 9s. per square yard. price of the tank would be £5 when new, £2 second-hand. The window frame d be worth from 30s. to £2. The flag- es were in such a condition that they were ed to be put down again, and they were broken.

he defendant said he had been in the build- trade 35 years, including ten years as an, and it had always been the custom

for the builders to take away the old materials, if they were not mentioned in the contract. In some cases they used parts of the old materials, and it would place them in a very difficult position if they did not abide by this custom. All he took away of the flagstones was about five yards.

Mr. William Bevan, a master builder, of Ross, and president of the Herefordshire Builders' Association, said he had been in business nearly 25 years. There was a custom in the building trade, well known to both builders and those people who employed the builders, of taking away these surplus materials. Personally he had never been asked to return anything.

Mr. Walter Smith, of Monmouth, formerly surveyor to the Monmouth County Council, and consulting surveyor, said in large contracts allowances were generally made for old materials. It should be stated in the specifications as to whether the contractor was to have the old materials or whether allowances were to be made for them. If such was not done then the old materials became the property of the contractor.

His Honour said this was a most important case. It was not a new one to him. He had listened very carefully to the evidence on this occasion, and he was quite satisfied that there was no such custom. He said quite candidly that he did not like this claim on the part of the builders. There was bound to be a limit, and it must be confined to only very small articles. One of the witnesses admitted that in large contracts these things were provided for, and something ought to be done if builders were to have these materials. He did not like builders regarding such things as tanks, boilers, lead pipes and taps as sorts of perquisites. He did not think it was an honest thing for builders to tender for work, go and do the work, and then take away valuable materials, simply because they said it was a custom in the trade. There could be no such custom, and builders had no right to do it. If they wanted to take away these materials there should be some stipulation, making it quite plain as to what allowances should be made. He did not apply these remarks to the present case, but the practice was a most undesirable one, and it would be no use for people to come before him with the idea of trying to make him think that this was a custom that could be allowed. He would, therefore, give judgment for the plaintiff for £10, with costs on scale C, the sum to be reduced to £8 if the tank was returned within six days.

[The above report is abstracted from THE HEREFORD TIMES.]

ARCHITECT'S CLAIM FOR FEES

Dundee Housing Scheme Dispute.

AN action by an architect against Dundee Town Council in connection with the Logie housing scheme was the subject of an opinion issued recently by Lord Constable in the Court of Session.

In this action William Bruce Dickie Keith, architect, Dundee, asked for payment of £1,053, being the balance of fees claimed to be due to him as architect of certain dwelling-houses. The account sued on included both architect's fees proper and measuring fees.

Various objections to the account were stated by defenders, but the parties agreed that in the meantime consideration should be restricted to two general points. The first and main point was whether the architect's fees claimed had been calculated on the proper basis, and the other was whether pursuer had committed a breach of his duty as architect by failing to give explanations with regard to certain items in the contractor's accounts.

The houses referred to form part of those built at Logie. These houses number 250 in all, and were distributed among five architects, of whom pursuer was one. The scheme originally

contemplated by defenders was much larger and even as ultimately sanctioned by the Board of Health it included 886 houses erected on six different sites, on most of which pursuer was also one of the architects employed.

Pursuer framed the present account on the footing that the houses on the Logie site formed an independent scheme, and maintained that his remuneration was regulated by, *inter alia*, a scale of fees issued by the Ministry of Health in September, 1919. Defenders on the other hand, maintained that the scale applicable was a scale issued by the Scottish Board of Health in September, 1920, and that under that scale all the houses erected by defenders under the Housing and Town Planning Act of 1919 fell to be treated as one scheme, and pursuer's fees fell to be calculated at a materially lower percentage on a value ascertained from the average cost of all the houses in the scheme, the accounts for which were not in fact yet complete. The question depended upon the terms arranged by the parties, because it was common ground that there was an express arrangement regarding remuneration.

Lord Constable pronounced findings to the effect (1) that pursuer's claim to remuneration was regulated by memoranda issued by the Board of Health in September, 1920, on November 7, 1922, and on August 23, 1923; (2) that in applying the scale of fees therein contained all the 886 houses referred to fell to be treated as one scheme; and (3) that pursuer was bound as a condition of proceeding with his action to give to defenders such explanations as might be reasonably possible with regard to the items detailed in the notes of the Board of Health; and continued the cause.

His Lordship also found defenders entitled to expenses since the date of the order for proof.

DELIVERY OF CEMENT

Question of Number of Sacks to the Ton.

IN Barnet County Court the case was recently heard of Lewis Morgan & Co. (1925), Ltd., v. Jones Bros. The plaintiff company claimed £14 14s. from defendants, who were engaged in work in Friern-lane, Friern Barnet, and whose registered offices were stated to be at Friern Villa, High-road, Whetstone, in respect of five tons of cement supplied to the order of defendants.

In evidence for the plaintiff company, it was stated that there was some delay in the delivery of the cement on account of the lorry being held up by a damaged axle. Defendants wrote cancelling the order, stating that the cement had not been delivered in time. It was a term of the contract that the order could not be cancelled while the goods were in transit.

In the course of cross-examination, counsel for defendants alleged that defendant's foreman had been bribed to accept delivery of the cement. John Pringle, a director and secretary of the plaintiff company, said when defendant's foreman refused to accept delivery he offered the foreman "a drink" (he afterwards said a shilling) in order to get his (plaintiff's) man away.

Alfred William Jones, builder, trading as Jones Bros., the defendants, said plaintiff's representative told him they could give him immediate delivery. The cement he ordered from plaintiffs did not arrive in time, and he had to order elsewhere and cancel the order to plaintiffs. There was one sack short in every ton, and he had suffered damage by the delay in delivery.

George Thomas Lawrence, defendants' foreman on the estate at Friern-lane, said Mr. Pringle offered him 5s. if he would unload the cement from the lorry. He refused to take the money, and told Mr. Pringle to telephone to Mr. Jones and get authority to deliver. Mr. Pringle came back and said he had the authority over the telephone for the cement to be unloaded, and witness then unloaded it. Out of 50 sacks 46 had been used.

The Judge gave judgment for plaintiffs, for the amount claimed, with costs, and dismissed a counter-claim which had been filed.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—ED.

Liability of the Building Owner.

An inquirer states that he built some houses in a certain suburb, and that another person has denied this. He then goes on to state that he did not build them. He further states that a certain manager to a firm has informed him that he did build the houses, and that in any case if a workman employed on the work met with an accident he, the inquirer, if "the builder went bankrupt," would be liable. It is somewhat difficult to reconcile all the above statements and to explain the law without some further and better information; but if, as it appears, the inquirer is the employer, and has in fact employed a builder to build the said houses, then, if an accident happens to an employee of the builder and the builder becomes bankrupt, the following may be of use to him:—

Most building contracts contain a clause whereby the builder indemnifies the building owner from all liability for damage or injury which is the result of negligence on the part of the builder, or his workmen or agents, in executing the work. The builder is, therefore, liable under the terms of the indemnity clause referred to, and the work is a lawful undertaking, for injury to one of his employees; but, if the building owner retains any control over the work during its execution, or it can be shown that he has interfered materially with the builder's control of the work, and the workmen employed, then he, the building owner, is liable for his own negligence, and any injury also for that of the builder or the builder's workmen; and he loses his rights under the indemnity clause referred to. It follows that if the building owner does not employ a builder, but engages workmen direct and carries out the work himself, he is the builder and is liable for negligence or injury to workmen he employs, and he should guard himself against this by a policy of insurance.

When an employer is insured and becomes bankrupt, the rights of the workman under the policy of insurance become the same as his employer's. Section 5 of the Workmen's Compensation Act, 1906, transfers to, and vests in, the workman, all the rights of the employer against the insurers. If the employer is not insured, then the protection afforded by the Act to the workman is that of placing the compensation payable among those debts which, in the case of bankruptcy or liquidation, are required to be paid in full in priority to all other debts. So, if the builder is not insured and is liable for injury to a workman, the liability is not shifted to the building owner by the former becoming bankrupt. See also chapter xvii of "Creswell On Building Contracts."

Boundary Wall Question.

[REPLIES TO "OLD READER," OCTOBER 16.]

SIR,—I am afraid your correspondent has no redress in the matter described. It would appear from the sketch that the shed preceded the brick wall, and A should have taken steps to construct the wall so that it could suffer no damage from the existing conditions. He cannot expect those conditions to be altered because these precautions were not taken. It would also appear that now the vertical damp-course has been laid, the heaping up of the earth at the back is doing no harm. Z.

SIR,—Every landowner is entitled to the free enjoyment of the land he possesses, and to use it to its best advantage subject to any restrictions there may be thereon. The violation of some right which another—as, for instance, the adjoining owner—possesses may constitute an actionable nuisance; and the act or omission causing or constituting the alleged nuisance is unlawful if it is in violation of statutory provisions, or of private common law rights. In the case of a private nuisance by a continuance of an illegal act the wrongdoer may

be able to gain a right to continue it, i.e., he may obtain a prescriptive right to commit the nuisance.

On the facts given by "Old Reader," "B" appears to have constituted an actionable nuisance, and "A's" remedies are:—

(1) To seek the aid of the local authority under Section 35 of the Public Health Acts Amendment Act, 1907, if the deposit of material &c., renders the building so damp as to be dangerous or injurious to health.

(2) To abate the nuisance himself.

(3) To apply to the court for an injunction, compelling the defendant to abate the nuisance.

(4) To bring an action for the money value of the damage caused by the interference.

If (1) is not applicable, it must, however, be borne in mind in considering (2) that no one has the right to trespass on his neighbour's land, even to redress a grievance. A physical remedy, involving trespass, is not satisfactory or respectable; and the trespass is necessary every time the difficulty arises. Taking the law into one's own hands, especially if damage is caused thereby, generally leads to litigation.

The remedy is to obtain redress in the court, and the court will settle the particular kind of remedy applicable—generally in favour of settlement by a money payment for damage done rather than by granting an injunction. If the wrongful act or omission is repeated or continues there is a new nuisance each day, and a cause of action arises from day to day.

It will be seen that, though "A" cannot directly force "B" to reconstruct the roof of the shed or to remove it, if he pursues one or other of the remedies above indicated "B" will, no doubt, fall in, or be made to fall in, with some scheme that will end the nuisance which has hitherto been created.

LEGAL.

Lath-and-Plaster Repairs.

[REPLY TO "A MANAGER," OCTOBER 16.]

SIR,—A fair price for cutting out old lath-and-plaster work, repairing laths and making good with lime and hair and finishing with Sirapite, would be 4s. 2d. per yard super. Generally speaking repairs to old property do not form the subject of a fair lump sum contract. The builder does not know quite what he is up against when work has to be uncovered, and his tender is generally made with the prospect of finding the worst. Consequently the employer often pays through the nose for the pleasure of knowing at the outset what will be his total commitment. If a reliable firm is chosen and employed upon the basis of cost plus an agreed percentage, it is generally the most satisfactory method in the long run.

"JOBBER."

Treatment of Dairy Floor.

[REPLY TO "DAIRIES," OCTOBER 16.]

SIR,—Asphalt, as a term, is applied to various classes of coverings, and to various grades of each class. An asphalt floor of the right grade and quality should not behave as described by your correspondent, under the heaviest wear. If a good firm of specialists are employed, they should be able to make good the floor in asphalt, and guarantee its wearing properties. This will be better than any cement or concrete floor, which will inevitably chip and wear under the heavy usage indicated.

BITUMEN.

Concrete Bricks.

[REPLY TO "F. J. W.," OCTOBER 23.]

SIR,—Having had considerable experience in the use of concrete bricks, I advise "F. J. W." not to use them for 9 in. solid walls if made in the proportion he states. With different coloured aggregate, or a little colouring added to some of the bricks, a very pleasing effect can be obtained. The outer walls should, however, be hollow.

G. QUINTON.

SIR,—In my opinion a perfectly sound and substantial job can be obtained with a concrete brick of the solid variety if built as cavity walls, with the usual galvanised iron bonds; but for

the front work one should make a brick with a fairly fine aggregate (ballast) and sharp sand in proportion of 6 and 1, mixed with one of many well-known waterproofers, powdered liquid. The interior brick could be made with indented surfaces for plastering. Be sure in building that the iron bonds are kept clear of mortar droppings, air-bricks, and damp-course. G. W. I.

SIR,—A very good brick can be made with sand, gravel and cement, but it is essential the raw material should not contain any organic matter. If bricks are made with material containing clay—except, perhaps, a very small percentage say not exceeding 2 per cent.—they will crack when built in, owing to shrinkage. I have used excellent bricks with sand and gravel and cement, the mix being 8 to 1. This is strong enough provided the brick is made under pressure and therefore thoroughly consolidated. Resistance to water is not so much a matter as a rich mixture as of density, and this applies equally to the crushing resistance. An important factor is the thorough watering of bricks after manufacture in order to get each particle of cement to act. If your correspondent cares to communicate with me I can call attention to a hand machine yielding between 8,000 and 9,000 bricks per 8-hour working operated by two unskilled men. F. I.

[A reply has also been received from "R. K."

Mortar.

[REPLY TO "BRICKLAYER," OCTOBER 16.]

SIR,—The addition of hydrated lime, or putty, thoroughly mixed with the cement sand will make the mortar "fat" and will reduce the strength. Lime slaked with water and sifted or screened should not be used. About 30 years ago I was in charge of a hospital scheme abroad. The lime available was fit for plastering only. The sand was angular grit, and the specification provided the mortar to be 1 part cement to 4 parts sand. This was very "short," and it was practically impossible to get it to hold up against the weight of the bricks. I made lime mortar with 1 part cement, 1 part sand, and 2 parts of this added 1 part cement. The bricks were well soaked before use, and the result was excellent from every point of view, and the saving in expense was considerable. At that time it was a popular belief among architects that the addition of lime to cement was detrimental to the latter, and it was only proved by experiment that I was all right to use the mortar as above. A large proportion of cement might be required for some alterations and repairs I always specify a class of mortar in preference to cement and sand. Hydrated lime is cheap and plentiful, and I advise its use instead of lime putty.

G. QUINTON.

SIR,—To make Portland cement "fatter," I have used the following: 1 part land cement, 1 part ground grey lime, and 6 parts clean, sharp sand. This is extremely hard when set, and is used by pointing bricklayers' work. Make only sufficient for a day's work. G. W. I.

"Plans and Local Authority."

SIR,—In the reply on this subject in issue for October 16 the statement is made, "in any case the authority must approve or disapprove such plans within a month after the date of submission." I know that the quoted words are an "urban" authority, but is every "rural" authority under the same obligation? I should be glad of an assurance on this point. SURVEYOR.

Internal Finish for Exposed Walls.

SIR,—Have any of your readers had experience of a suitable internal finish for brick or concrete walls of a building having a long frontage, the whole of which is permanently open and exposed to the air, fog or damp atmosphere? I desired to finish the internal walls and ceiling in a smooth plaster such as Keen's, finished with paint. Will exposure such as mentioned above have any ill-effect on the plaster? Have your readers any alternatives to suggest? SUBSCRIBER.

THE BUILDING TRADE.

HINTS TO BUILDERS

By J. H. BARNES, F.I.O.B.

SETTING OUT THE WORKS.

IN many instances it can be seen that to-day architects are relying on simple lines for their effects rather than using masses of ornate work, and these simple line effects usually require more care in arranging and setting out, and, as a rule, are rather costly to produce. Indeed, a great deal more precision seems to be needed nowadays in the setting out of building work, as the expensive rental of the site and sharply-defined boundaries make it essential that even the smallest amount of space should not be lost, and there is therefore little or no margin left for errors or inequalities in setting out. Building work carried out under these conditions is bound to prove more expensive than a structure of a rough warehouse character erected in a field, where the question of a few inches either way is not of great importance.

The setting out of the premises would have to follow the usual course and each part would not doubt be required to be done by the various experts in each particular trade with the general co-operation of the foreman to get the right interpretation of the architect's drawings and specification. If one were to speak generally on such a vast subject as the setting out of a building it could only be to say that there are no short cuts possible, and each particular piece of work must be performed with meticulous care and attention by men well skilled in their own trades.

Avoidance of Errors in Setting Out.

There are a few obvious points which can be indicated as to how and where mistakes are likely to occur, because the drawings of any building are usually only general drawings and cannot be expected to give the detailed construction of what is required at every particular part of the building. What is correctly shown as the section of a wall in one place will not necessarily be the section of the wall on other parts of the same floor. For instance, sometimes the wall on the floor of which the section is shown may set back $\frac{1}{2}$ in. either on the outside or the inside face of the wall. If this offset were to occur on the inside it might be necessary to increase the length of the girder or floor joists from what is required for the lower floors. Offsets of this description would be almost certain to affect such details as vertical runs of pipes, which are sometimes desired to be carried in the angle or chase of the building, and the setting back of the wall on one particular floor would necessitate either the pipes being bent to arrange them back against the recessed face of the wall, or if the pipes were to be continued quite plumb from top to bottom they would have to be kept away from the angle on some floors because of the offsets in the wall previously mentioned. If the wall is set back on the outside of the building there is a likelihood of errors arising at some points because where the wall is set back the stone cornice (if any) may need to be taken further on to the wall, so as to be properly tailed down by the brickwork above.

Another of the traps for the unwary "setter-out" is that the girders which may appear to be in a certain position when set out on the plan, may, when set up in elevation, come below the head of the window. This sometimes occurs in the case of windows to staircases.

A difficulty may be experienced in obtaining sufficient head room to a staircase, and the diversion of chimney flues will sometimes need considerable ingenuity.

Where large pieces of joinery are required the "setter-out" must satisfy himself that the framing is made in sections of sufficient size to secure their access into the building.

Where large boilers have to be installed in the building, openings should be arranged for removal of the boilers when required, without

a large amount of demolition being needed. Where wells have been sunk within the confines of the site, arrangements must be made for leaving a sufficient space overhead to allow of the removal of well rods for repairs, &c. Where lifts are to be fixed against an external wall, the offsets in the brickwork may cause some little trouble in setting out.

It is often a matter of very great difficulty to obtain an adequate fall to the gutters on the roof, as, with the usual system of drips to gutter, and only one outlet to a large roof, it may necessitate the gutter being carried up a greater height than may be considered convenient to the general arrangements of the building. The general arrangement and the construction of the roof usually presents many opportunities for errors, particularly where the building is not exactly parallel on plan.

The drains and general sanitary arrangements of the building will need considerable care in setting out before the work is commenced to make sure that the drains will not be constructed at too low a level, as they must obviously be governed by the depth of the sewer in the road.

These and many similar matters may be quoted to show the need of particular care in setting out, and where the beginner comes across some special "trap" he should make a note of this for future reference and consideration, so as to safeguard the setting out of his next job. It is no doubt possible to blunder through most jobs, but the cost of rectifying several errors after the work has been wrongly executed would probably be very much more than to have had the job properly set out by a painstaking method.

The use of the usual well-known instruments, such as dumpy level, &c., can be strongly recommended, as the foreman is able in a few minutes to get the required levels from any particular spot, but the ease and accuracy with which this result can be attained would in itself often cause a liability to error, so that many firms nowadays prefer to check their levels by the old-fashioned methods, with a long spirit level, &c.

Water for Use of the Works.

As in most cases the water required for building works will have to be obtained from the mains of the local water supply company, it will be necessary to give them notice of the proposed works and make a formal application for connection and supply. Such applications should give some particulars and dimensions of the intended building, together with the approximate cost. In London any person making application for a supply of water is required by the Metropolitan Water Board to give fourteen days' notice to the Board before the service pipe is connected to the Board's main, and beginners should bear this in mind, and lodge their application in ample time. The Metropolitan Water Board have two methods of charging for supplying water for building purposes:—

1. By meter, by which the amount consumed is recorded and charged at the statutory rate per 1,000 gallons, subject to the statutory minimum charge of 20,000 gallons of water at 1s. 2d. per thousand, amounting to £1 3s. 4d. per quarter, together with the charge for meter, &c.

2. By agreement, at the rate of 7s. per cent. on probable cost of proposed building, and the Board will make such allowance as they may think reasonable for decorative or ironwork not requiring water. The charge in the latter instance would be payable in advance.

Application for water supply must give the dimensions and description of proposed building. Notice must be given in writing to the

Board not less than twenty-four hours before disconnection of any meter or pipe and this disconnection must be done under superintendence of an officer of the Metropolitan Water Board. The builder must further undertake not to use the building or temporary supply pipe for the permanent supply of the building without obtaining the consent of the Board. These and other regulations are made so that the Board shall have a record as to when the building operations are completed and actual occupation of the premises takes place, and an opportunity of examining the new pipes and fittings to see that they comply with the Board's requirements.

It is somewhat difficult to compare the cost of the two methods of charging water consumed on the works, but speaking quite generally it may be taken that the cost of water by meter would work out at about half the cost of water assessed at 7s. per cent. on cost of building work. If the job were a small one and likely to spread over a long time, it may be cheaper to pay 7s. per cent. on the estimated cost of the building than for the metered supply, as in the latter case the "minimum" sum which the Board would charge each quarter together with hire of meter may cost more than the first mentioned method. In the case of building work being done in an occupied building where the water supply is already in existence, either by meter or otherwise, the builder would still be charged for water on the lines indicated above, and should allow in his estimates accordingly.

The water service pipe should be arranged to be brought into the building in a convenient position for supplying the general permanent sanitary arrangements so that the temporary building main connected with the Company's service may be adjusted for the permanent supply and thus save the cost of opening up the road to alter the position of the communication pipe, which would be necessary if the service is brought in at the wrong point.

The temporary supply pipe should be connected to a temporary storage cistern, usually placed on the ground floor, so that water may be baled out when required. When the building to be erected reaches to a height of several stories it is usually a convenience to fix a temporary rising main to each floor with a hose connection so that the water may be delivered to the required position.

Provide all Necessary Watching and Lighting.

If the job is to be a long time in progress, it may cost a fair sum in watchman's wages, the provision of fuel, &c. Therefore it should be a matter for careful consideration as to whether a watchman is actually required, as on many jobs there is very little of value that can readily be removed and it may be worth while to take the risk of any small amount of pilfering or damage than to go to the expense of installing a watchman. On some jobs the matter may be dealt with by providing a watchman for the week-ends only. In some contracts it is specially stipulated that a watchman must be in attendance during the time that the works are not in progress, which may necessitate a system of "relief" men for Sundays and holidays. In certain cases it is advisable to install some system of "time recording" or "tell-tale" to ensure the watchman being at defined points at a given time. A watchman may be a great convenience to a job if some system of inspection is arranged to see that the duties are being carried out in an efficient manner, as he could give early notice of accidents, such as burst pipes, which may flood the premises.

Artificial Light for the Works.

On some jobs artificial light is needed at all times of the year, particularly in basements, &c., and most building jobs will need to have artificial light fitted during the winter months. Wherever possible temporary electric lights should be installed, at least, for lighting the

general area of the site. It may prove too expensive to install an adequate system of temporary electric lights, but so long as the general area is lighted by electric or other lamps, the particular parts of the work requiring concentrated light can be dealt with by hand lamps, using carbide or oil. In the case of electric light being used the contractor should be careful to protect the lamps against damage, and it is sometimes considered advisable to have the contractor's name marked on the lamps. Where carbide is used the local by-laws (if any) governing its use and storage must be observed. The smoke and fumes of carbide may discolour the plastering, and care should be taken as far as possible to prevent this. The waste carbide should be periodically removed from the works and not allowed to become mixed with any building material. Hand lamps will need constant attention and replenishing, and this general attendance may be an expensive item. Temporary gas points are sometimes a convenience for lighting the works.

Attendance on Other Trades.

The builder is usually called upon to provide the attendance of one trade upon another, and to perform any cutting away required. This cutting away may be a very great source of expense, and care should be taken as far as possible to leave the holes in the work as it is being executed, and thus save a great deal of the continual cutting away which sometimes goes on. Pneumatic tools will effect a saving in cost of such work where the job is of sufficient importance to justify their installation. Electric drills are not often used for perforating brick-work.

THE SHUTTERING COMPETITION

The Committee appointed "to inquire and report as to new materials or methods of construction which are or may be available for the building of houses for the working classes and to make recommendations as to the organisation required for securing the adoption and use of a proved new materials or methods by local authorities and other bodies or persons providing such houses" have now reported to the Minister of Health on the recent Shuttering Competition. They state that they have completed their examination of all the systems entered for the prize offered for a new method of shuttering to be used in connection with concrete cottages. The primary object of the competition was to stimulate and bring out new ideas, and methods and systems already in use, or published by patents, were, therefore, specifically excluded from the competition. The Committee are of opinion that the system submitted by Mr. R. L. Bendall, "Scarborough," Richmond Wood-road, Bournemouth, is the best entry received, and, therefore, should be awarded the prize of £250. While, however, they are satisfied that this system has merits and is the best of those submitted, they think it necessary to state that it must not be regarded as superior to some of the systems which are already in use, or published, and were, therefore, ineligible for this competition. They have not felt justified in advising that the further prizes which it was within their discretion to recommend should be awarded.

New Reservoir at Bushey Heath.

The Colne Valley Water Company are constructing a new reservoir at Bushey Heath, at a cost of £120,000. It will hold 8,000,000 gallons and, with two other reservoirs, will give the company a covered storage capacity of 14,500,000 gallons. Wembley is within the company's area, and arrangements were made to supply the British Empire Exhibition with 1,500,000 gallons a day.

FLOOR LOADS AND L.C.C. REGULATIONS

MR. TOPHAM FORREST's recent Report to the London County Council on "The Construction and Control of Buildings and the Development of Urban Areas in the United States of America" contained some important recommendations relating to the revision of the floor loads provided under the London Building Acts. A correspondent reminds us that the County Council has power to make by-laws relating to the dimensions of joists of floors, and suggests that the recommendations referred to should be brought prominently to the notice of architects and builders. We accordingly reprint the recommendations hereunder.

Mr. Topham Forrest gives a comparison between British and American floor loads, together with his suggestions for the proposed regulations. It will be seen that these figures show a trend towards an international standard which perhaps may be regarded as a consensus of universal opinion in a matter on which there is universal experience.

Mr. Topham Forrest adds that he is well aware of estimates which have been made both in this country and abroad in respect of the actual weights found in actual buildings, but the result of such tests should not be regarded as the sole criterion. The weights proposed in regulations should take into account all the questions which go towards the stability, fire resistance, endurance, freedom from excessive deflection and general security of floor construction, including those properties which conduce to silence.

of the floor itself and not the purpose of the building as a whole, and it certainly should not vary with the material used in the construction. It is certain that the advocates of any given material would regard any attempt to vary the loads on a floor according to the kind of material as an act of injustice. It is also certain that the Technic Institutions would disapprove of any suggestion so unscientific. If any form of construction does possess greater or less stiffness or greater or less reliability, the correct method would be to make some appropriate adjustment of the safety factor, and of the constants used in the calculations of deflections.

The question of floor loads is highly controversial, and recommendations often seem to come in pairs—one to reduce and the other either to conserve or increase.

The accompanying table bears comparison with any in respect of its regularity and reasonableness, and if later on the consensus of technical opinion suggests any improvements, Mr. Forrest will be prepared to recommend their immediate adoption.

The London Building Acts contain no provision as to the construction of floors in buildings other than those of steel frame or reinforced concrete construction, whilst the American Codes contain regulations as to floors in all buildings.

The Council has power under the London Building Acts to make by-laws relating to the dimensions of joists of floors, but up to the present has not done so, probably owing to the difficulty in small property of having to work to specific sizes for joists when scantling other dimensions might give an equal stability.

SUPERIMPOSED LOADS ON FLOORS. Comparison of London Practice with Practice in 109 American Cities.

Use of Floor.	Superimposed weight in lbs per sq. ft.			
	Present practice in London.	Average of 109 American cities.	Proposed for London.	
Attic floors in dwellings.....	70	49.7		40
Dwelling (ground floor).....	70	52.2		50
" (above ground floor).....	70	49.7		50
Tenements (ground floor).....	70	55.8		50
" (above ground floor).....	70	50.6		50
Hotel bedrooms.....	84	57.3		60 average
Assembly halls with fixed seats.....	112	95.9		80
School classrooms.....	112	69.9		80
Offices (above ground floor).....	100	69.7		80
Hospital wards.....	84	61		80
Assembly halls where crowds may be closely packed.....	112-150	110.3		100
School corridors, stairs and landings.....	112	92.5		100
Halls in schools.....	112	99.5		100
Hotel corridors.....	112	87.7		100
Hospital corridors.....	112	83.6		100
Retail shops.....	112	119.4		120
Offices (ground floor).....	100	114		120
Factories for light loads.....	112	121.8		120
Drill rooms.....	150	137		140
School halls in which drilling may take place ...	150	137		140
Playgrounds on school roofs.....	150	—		140
Ballrooms (and other floors subject to rhythmic vibrations).....	150	115.9 av. 250 max.		140
Retail shops for heavy goods.....	—	162.8		160
Factories for medium loads.....	150	177		160
Warehouses.....	224 min.	184.2 av. 450 max.		200 min.

Mr. Forrest observes that he is aware of suggestions which have been made to vary the permissible floor loads according to the type of construction (wood, steel, or reinforced concrete, as the case may be), and while arguments may be adduced in favour of this procedure, he feels that the weight of argument is against it.

In his opinion the permissible floor loads should be specified according to the purpose

and be more easily obtainable for the particular building. But whilst it might be considered unnecessary to lay down rules for loads and stresses in relation to floors in comparative small dwelling houses, it is desirable that the construction of floors in buildings of the same character as those in which steel frame reinforced concrete construction is common should be controlled both as regards loads and stresses.

NEW BUILDINGS IN LONDON.

Berkeley-street.—Messrs. Gordon Hotels, Ltd., 1, Whitehall-place, S.W. 1, are to equip as a large restaurant and grill room the ground floors of building in course of erection in Berkeley-street, W. 1. The work will be carried out by Messrs. Edcaster, Ltd., Vinery Works, Goldsmith-road, W. 12. Mr. W. Henry White, F.R.I.B.A., architect, 14A, Cavendish-place, W. 1. Messrs. The National Provincial Bank, Ltd., Bishopsgate, E.C. 3, have purchased large premises in Berkeley-street, W. 1, which they propose to open as a branch bank. Mr. F. C. R. Mer, F.R.I.B.A., architect.

Bishopsgate.—Marcus Estates, Ltd., are erecting a four-story building at 203-211, Bishopsgate, E.C. 2, with a frontage of 90 ft. to Bishopsgate. The Construction Department of the company are carrying out the building operations. Mr. Paul Hoffman, architect, Capel-street, E.C.

Bishopsgate.—Possession is to be obtained shortly of the large site in Bishopsgate and Houndsditch, E.C. 4, recently acquired by the London & Northern Estates Co., 42, Old Broad-street, E.C. 2. A modern block of offices, with shops on the ground floor, are to be erected to plans of Messrs. Richardson & Gill, 41, Finsbury-square, W.C.

Borough High-street.—A new block of shop and office premises is to be erected by Messrs. F. Blay, Ltd., Spital-street, Dartford, Kent. **Buckingham Palace-road.**—Rebuilding of the "King's Arms" public house is now in progress, under the direction of Messrs. Petch & Fernand, 1, Buckingham Palace-road, S.W. 1, acting on behalf of Messrs. Watney, Combe, Reid & Co., Ltd., owners. Messrs. Prestige & Co., Ltd., contractors, Cambridge Wharf, Grosvenor-road, S.W. 1. Cornish granite by Messrs. Bodmin Granite Co. (1912), Ltd., St. Stephen's House, Westminster, S.W.

City-road.—A large site is to be let on building site, situated at the corner of City-road and Hatherstone-street, E.C. 1. Details are in the hands of Mr. W. A. Lewis, A.R.I.B.A., 11-12, Finsbury-square, E.C. 2.

Coulson.—Plans have been prepared by Mr. Craddock Perkins, F.R.I.B.A., 25, Alkham-street, Stoke Newington, for the erection of a new branch for Messrs. Westminster Bank, Ltd.

Cricklewood.—A site in North Circular-road, N.W., has been purchased by Messrs. Allen-Perthridge, Ltd., acetylene manufacturers, extending to 10 acres, for the erection of new works and warehouses. Messrs. Heron, Roger & Pitt, consulting engineers, 181, Queen Victoria-street, E.C. 4.

Crouch End.—Messrs. Lloyds Bank are building a new branch at 34, The Broadway, Crouch End. Mr. Charles R. Price, contractor. Messrs. Price & Hobday, architects.

Denmark-hill.—A contract will be placed shortly for the building of the William Booth Memorial Institution, S.E., for the Salvation Army, which will cover a site about 20 acres, at cost £250,000. Joint architects, Mr. Alexander Gordon, F.S.I., 97, Queen Victoria-street, W. 1, and Mr. G. J. Morris-Viner, F.R.I.B.A., 1, New Court, Lincoln's Inn, W.C., in consultation with Sir Giles Gilbert Scott, R.A., 7, Gray's Inn-square, W.C. Messrs. Fleetwood, Persden & King, quantity surveyors, 3, New Court, Lincoln's Inn, W.C.

Euston-road.—The Metropolitan Railway Co. are in contemplation the reconstruction, with enlarged booking and other buildings, the premises of their Euston-road station to plans prepared by their architectural and engineering staffs at Baker-street Station, W. 1.

Fenchurch-street.—A further rebuilding scheme is to be put in hand early next year upon a site in Fenchurch-street, E.C. 3, including the shop and showrooms of Messrs. Ball & Co., at No. 41.

Gracechurch-street.—Messrs. Barclays Bank (London, Colonial and Overseas), are carrying out extensive alterations at 29, Gracechurch-

street. Mr. Charles R. Price, contractor, of Bishopsgate. Mr. H. Guy Holt, A.R.I.B.A., architect.

Greenwich.—Messrs. J. Elliman & Son, Ltd., 102, Bromley-road, Beckenham, Kent, are the contractors for the building of a new nurses' home at "The Woodlands," Vanbrugh-hill, East Greenwich, to accommodate 136 nurses. Messrs. William A. Pite, Son & Fairweather, architects, 12, Carteret-street, S.W. 1. Mr. Louis Jacob, quantity surveyor, 39, Bloomsbury-square, W.C. 1.

Hampstead.—A new art school, domestic science school, preparatory school, library, reading rooms, gymnasium and offices are to be erected at the Hampstead Garden Suburb Institute, in Central-square, N.W. 11, at a cost of £30,000. Sir Edwin Lutyens, R.A., 17, Queen Anne's-gate, S.W. 1, and Mr. C. E. Handscombe, A.R.I.B.A., Station Approach, Sanderstead, joint architects.

Hanwell.—A branch of Messrs. Lloyds Bank is being built at The Broadway, Hanwell. Mr. Charles R. Price, builder, Bishopsgate, E.C.

Harrow-on-the-Hill.—The Old Gaytonians' Association propose to build new club premises to plans prepared by one of their members, Mr. D. H. McMoran, of Harrow, who is an architect.

Holborn Circus.—The important modernisation to be carried out at the premises of Messrs. Thomas Wallis & Co., Ltd., general drapers, referred to in *The Builder* for August 21, is to be probably put in hand next year. Messrs. Yetts, Sturdy & Usher, architects, 115, Moor-gate, E.C. 2.

Houndsditch.—Messrs. S. Lesser & Co., Ltd., merchants, are to rebuild their showrooms and warehouse at the corner of Houndsditch and Creechchurch-lane, E.C. 4, to the designs of Messrs. Lewis Solomon & Son, 133, Moorgate, E.C. 2. Messrs. Griggs & Son, contractors, 100, Victoria-street, Westminster, S.W.

Iford.—The local Congregationalists propose to build a new church upon a site they have purchased in Broomhill-road. Messrs. George Baines & Son, 121, Victoria-street, S.W. 1, architects.

King's Cross.—A new warehouse is to be built at Field-street, N.W. 1, for Messrs. Hewitt Bros., printers' engineers, under the direction of Mr. Max Clarke, F.R.I.B.A., 20, Bedford-row, W.C. 1.

Kingsland-road.—Messrs. Young & Hall, 17, Southampton-street, W.C. 1, have prepared plans for the erection of a new nurses' home at the Metropolitan Hospital, E. 8.

Lincoln's Inn.—Messrs. E. & S. Smith, chartered surveyors, 68, Great Queen-street, W.C. 2, have acquired, on behalf of the Holy Trinity Church, in Kingsway, W.C., the premises at the corner of Whetstone-park and Gate-street, W.C., for conversion to parochial purposes.

Lincoln's Inn Fields.—Messrs. John Greenwood, Ltd., 12, Arthur-street, E.C. 4, are carrying out extensive alterations and improvements to a block of offices.

Ludgate Hill.—The City of London Electric Light Co., Ltd., Falcon House, Aldersgate-street, E.C. 1, have purchased the ground floor and basement of corner premises, which they propose to convert into showrooms and a restaurant. Messrs. Bull & Esdaile, Ltd., 30, Stannary-street, S.E. 11, contractors for alterations.

Muswell-Hill.—The cost of extending the Hornsey, Finchley, and Wood Green Isolation Hospital, in Coppett's-road, N.W. 10, is estimated at £30,000, and plans are now under consideration. Mr. E. J. Lovegrove, Southwood-lane, N. 6, Surveyor to Hornsey B.C., is acting as architect.

New Oxford-street.—The architect for the extension of the branch offices of Messrs. Barclays Bank, Ltd., at the corner of New Oxford-street and Hart-street, is Mr. Dudley G. Marsh, 38, Chancery-lane, W.C.

Old Bond-street.—Messrs. Archibald D. Dawson & Son, Ltd., Steelworks-road, Battersea, S.W., have erected the steelwork for the new six-story shop and office building, at the corner of Old Bond-street and Burlington-gardens, W. 1, for Messrs. J. & E. Atkinson, Ltd., perfumery manufacturers, Southwark Park-road, S.E. Messrs. E. A. Roome & Co., Ltd., contractors, 7, Urswick-street, E. 9. Messrs. Stanbrough & Harris, architects, 29, St. James's-square, S.W. 1.

Orpington.—Messrs. Edcaster, Ltd., Goldhawk-road, W. 12, have acquired the Knoll Park estate, where it is proposed to carry out a large development scheme, including the erection of 250 houses of a value of about £1,500 each.

Oxford-street.—Messrs. Bovis, Ltd., 43, Upper Berkeley-street, W. 1, are constructing foundations for the six-floored office and showroom building to be erected at No. 100, Oxford-street, W. 1, for Messrs. F. & C. Osler, Ltd., electric light fittings manufacturers. Messrs. Constantine & Vernon, architects, 82, Mortimer-street, W. 1.

Piccadilly.—Messrs. Rootes, Ltd., automobile agents, 141, New Bond-street, W. 1, have secured large premises on the corner of Piccadilly and Berkeley-street, W. 1, where they propose to open extensive showrooms.—The steelwork for the first section of the new building for Messrs. Swan & Edgar, Ltd., in Piccadilly and Regent-street, W. 1, is now completed. Demolition of the remainder of the old block will commence when the new building is available for occupation. Messrs. Higgs & Hill, Ltd., contractors, Crown Works, South Lambeth-road, S.E. Messrs. Dorman Long & Co., Ltd., steelwork, Central-buildings, Westminster, S.W. Mr. J. J. Joass, F.R.I.B.A., architect, 10, Old Burlington-street, W. 1. Mr. E. R. Babbs, 10, Old Burlington-street, W. 1, quantity surveyor.—The new terracotta front for the Park-lane Hotel, in Piccadilly, W. 1, is now being commenced, and work is being pushed forward on all parts of the site. Messrs. Higgs & Hill, Ltd., contractors, Crown Works, South Lambeth-road, S.W. Messrs. Smith-Walker, Ltd., steelwork, 33, Tothill-street, S.W. 1. Messrs. Kleine Patent Fire-Resisting Flooring Syndicate, Ltd., 133, High Holborn, W.C. 1, flooring. Messrs. Ragusa Asphalt Co., Ltd., 35, Oxford-street, W. 1, asphalt. Messrs. Henry Tanner, 3, Hanover-square, W. 1, architects.

Piccadilly-circus.—Work has now been started upon the foundations for the large new offices at the corner of Regent-street and Glasshouse-street, W. 1, for the County Fire Office, Ltd., who are now located at Lower Regent-street. Messrs. Holloway Bros. (London), Ltd., contractors, Bridge Wharf, Grosvenor-road, S.W. 1. Joint architects, Messrs. Ernest Newton & Sons, 4, Raymond's-buildings, Gray's Inn, W.C., and Messrs. William Woodward & Son, 15, Great James-street, W.C. 1.

Wimbledon.—A contract has been placed with Mr. Albert Monk, Lower Edmonton, N.W., for the erection of the first portion of the permanent buildings at the Wimbledon Park Council School, S.W. The accepted tender is £12,636.

Treowen Housing Scheme.

The State, the trustees of the Llanover Estate, the Housing Corporation of Great Britain, and the Abercarn Council are co-operating with the object of providing 600 dwellings for workers, at an estimated cost of between £250,000 and £300,000. A representative meeting has been held at Treowen, near Newbridge.

Limerick Docks Extension.

The Limerick Harbour Board have approved the Parliamentary plans for the extension of the docks.

The plans provided for a dock extension of seven acres, with a western entrance. There will be additional quayside space of 1,700 ft., and a bridge connection between the existing dock basin and the proposed extension.

The work will be carried out in concrete, at an estimated cost of nearly £150,000.

THE COMMERCIAL MOTOR EXHIBITION

THE Commercial Motor Transport Exhibition, which opened at Olympia on Thursday and closes on Saturday week, November 7, is one that is likely to attract builders and contractors in large numbers, for few other trades have been more thoroughly converted to mechanical transport. On the score of economy in working cost and in general efficiency, the motor and the steam lorry have long proved their value to the building industry; by no other means would it be possible to transport, with equal ease and rapidity, the heavy and often cumbersome materials which are employed in the construction of modern buildings.

Transport must keep pace with industrial necessity, and it is manifest from the Olympia show that the manufacturers of commercial vehicles are fully alive to the requirements of the time. Here is a wide variety of vehicles and equipment to meet an equally wide variety of needs. Below we refer to some of the vehicles which are on show and which have been especially designed to meet the requirements and conditions of the building trade.

The Morris Exhibit.

Morris Commercial Cars, Ltd., exhibit their one-ton tipping lorry. This vehicle is built for big jobs and tackles them with ease and efficiency. The hand-operated gear is capable of managing a full ton load, and the tail-board can be made to swing at the bottom as well as the top. Heavily constructed of the best materials, and having a platform lined with the toughest steel, the body of the lorry has been especially designed for the hard usage of builders and contractors; while the chassis follows the tradition of the Morris one-ton truck in the strength and reliability of its engine. The cost of the lorry is £238, which includes spare wheel, grease jars, Lucas electric lighting, driving mirror, and comfortably upholstered driver's cabin. The body sizes of the lorry are: Length, 7 ft. 6 in.; width, 5 ft. 6 in.; height of sides, 1 ft. 6 in. It is an excellent general purpose vehicle as well as a tipping lorry.

"Sentinel" Exhibits.

The main features of the "Super-Sentinel" design, which was offered to the public in 1923, remain unchanged, having proved in practice entirely satisfactory. Improvements in details suggested by experience, have, of course, been carried out from time to time. Amongst these may be mentioned the brake hand-wheel, which has been considerably increased in size, thus giving much more power. The pipes between the pump and the feedwater heater, and also from the feedwater heater to the boiler, have been increased in diameter to allow of a more ready flow. The original funnel base has been considerably altered, the damper having been removed therefrom and placed at the top of the funnel; the funnel also has been entirely modified, its lining now being shaped as a Venturi tube. The result of these changes has been still further to improve the steaming and economy of the boiler. Another feature worthy

The Morris Tipping Lorry.

of note is that the lighting dynamo on those waggons equipped with electric light are now driven by chain instead of by belt, this drive being more positive and less likely to derangement through adverse weather conditions. A feature of the "Sentinel" exhibit is the large number of vehicles which are repeat orders for famous firms.

The Leyland Exhibit.

Messrs. Leyland Motors, Ltd., are exhibiting their well-known commercial vehicles. The price of their 6-ton "Q.H.2" chassis is £1,050. An illustrated description of the Leyland lorry will appear in our next issue.

The Bean Commercial Lorry.

The Bean Commercial Lorry provides a vehicle particularly suited to withstand service under the most strenuous conditions, and its capacity—25 cwt.—is such that it meets the requirements of 90 per cent. of users of motor transport. Among the many desirable features it embodies is the four-speed gear-box, with right-hand change; the bottom gear, having a ratio of 25 to 1, is purely an emergency gear, thus permitting the engine to negotiate freak hills with full load and the minimum amount of stress and strain, whilst the top gear, which is 6.14 to 1, enables a good turn of speed to be attained. Because of this, and the robust construction of the chassis as a whole, the Bean will be found particularly suitable for service in hilly country.

London Builders' Foremen's Association Dinner.

The Fourth Annual and Second Ladies' Night Dinner of this Association was held on Saturday, October 24, at the Abercorn Rooms, Great Eastern Hotel, Mr. F. Thorne, F.I.O.B., President of the London Master Builders' Association,

occupying the chair, and Mr. W. J. Tozer, President of the London Builders' Foremen's Association, the vice-chair.

Redecoration of Coliseum Auditorium.

The work of redecorating the auditorium in the London Coliseum has been completed by the contractors, Messrs. F. De Jong & Co., of 84, Albert-street, Camden Town, N.W. The colour of the Italian sky has been substituted for the gold of the 1904 design.

Streatham Common Town-Planning Scheme.

The L.C.C., on April 15, 1924, decided to prepare a town-planning scheme in reference to certain land, about twenty acres in extent, in the neighbourhood of Streatham Common. The Town-Planning Special Committee report that they have prepared the draft scheme and map. As regards new streets, they think it desirable to prescribe a street already proved by the Building Acts Committee, which is designed to connect with a proposed street in the Croydon (North) Town-Planning Scheme on the other side of the county boundary, through communication to Streatham Common. With regard to limitation of user, they suggest two divisions, an area of about five acres to the south of "The Rookery" to be reserved as a public open space, and the remainder to be used for residential houses. A general limit of houses to the acre is proposed. As regards proportion of the plots to be occupied by buildings, the houses in the neighbourhood contain two floors, and occupy about one-third of the plot, and it is considered that this should be adopted. Having regard to the fact that the height of houses in the neighbourhood does not exceed 30 ft., it would be desirable to add to prescribe a lower limit than that which would operate under the London Building

The Sentinel Steam Lorry.

A new electricity demonstration hall and the Hackney Borough Council, in Lower Road, N.E., built at a cost of about £100,000, were opened recently.

Timber Merchant's Estate.
Reuben Gliksten, of Park-lane, and of Park-road, Stratford, E., a timber merchant has left net estate of the value of £1,000,000.

Southampton Fire.
A serious fire broke out in Southampton recently and burnt down a seven-story warehouse. The damage is estimated at about £1,000,000.

Clacton Road Improvements.
Clacton U.D.C. propose to apply to the County Grants Committee for sanction of £22,050 for widening and improving the road from the Station-road to the boundary of the district.

More Nottingham Schemes.
County Council have approved the extension of a new road through Wollaton at a cost of £45,630. The Corporation is purchasing the Lenton Abbey estate, at a cost of £20,000, for housing purposes.

Yarmouth's New Shopping Centre.
Progress has been made in preparing a new arcade between Regent-street and the sea. The architect is Mr. F. R. B. B. and the building contractor, Mr. B. G. of Yarmouth.

Rural Road Grants.
Ministry of Transport has recently made towards rural road schemes, the total cost is about £300,000. The latest agreement the Treasury provides for an increase in the next financial year by £750,000 of the already made for the needs of rural roads.

Obituary.
Death has occurred at Tiverton, at the age of 64, of Mr. John Somers Grater, head of Messrs. John Grater & Sons, builders.

Death took place recently of Mr. William G. builder, of Boyn Hill, at the age of 61.

Frederick John Voisey, for many years Surveyor of Dartmouth, prior to which a builder, died recently at the age of 61.

Death has taken place at Penzance, at the age of sixty-five, of Mr. William James, head of Messrs. Perkins & Caldwell, firm of builders and builders' merchants in West Cornwall.

Regret to record the death of Mr. Edward Lister, a well-known Plymouth architect and surveyor. Mr. Lister, who was 70 years of age, carried out much work in Plymouth, including the Market buildings, the Royal Eye Hospital, the Pearn Convalescent Home, and in connection with his former partner, Mr. C. Augustine's Church.

(For rates of wages in the Building Trade in Scotland, see page 649)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, etc.

PROPOSED NEW BUILDINGS & OTHER WORKS*

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

ACTON.—The B.C. has recommended Mr. Middleton to submit amended plans to the Baths Committee and afterwards to the Works Committee, for the extensions to the Public Baths.—Messrs. Rydman, Street & Bridge have submitted an application to the B.C. for the acquisition of the whole of a substantial portion of the land still remaining at the East Acton housing estate, for the erection of houses.

ADWICK-LE-STREET.—The U.D.C. has decided that the Industrial Housing Association be approached with a view to the sale to the Council of land at Woodlands East, on which to build 180 houses.—Application is to be made to the M.H. for sanction to borrow £2,968 for wiring 350 Council houses.

ARLESEY (W. YORKS.).—The M.H. has sanctioned a scheme for the erection of 110 houses. Tenders are to be invited for the first portion of the contracts, comprising 52 houses.

AYLSBURY.—It is proposed to build an annexe to the Aylesbury Grammar School, to include new laboratories, cloakrooms, &c. Plans have been prepared by F. Taylor, 50, Bourton-street.

BAMBER BRIDGE.—The Parochial Church Council of St. Saviour's are to erect a war memorial hall.

BARDNEY.—A sugar beet factory is shortly to be erected at Bardney, near Lincoln.

BARNES.—The M.H. has sanctioned a loan of £32,000 for the erection, by the Surrey E.C., of a secondary school for boys.

BARNET.—The Governors of the Boys' Grammar School are considering the question of the erection of a new school or rebuilding the present one. An architect is to be appointed.

BARNLEY.—The M.H. has sanctioned a loan of £34,000 for the purchase of property for the central area improvement.—The question of accommodation at the cattle market is under consideration.—The Borough Engineer is to prepare plans for the lay-out of Churchfield as a recreation ground, including the provision of a bandstand.—The Borough Engineer is to obtain estimates for the construction of a paddling pool and a sandpit.—Tenders are to be invited for the erection of buildings at the Soughley pumping station.

BASFORD.—The B.G. has decided that application be made to the M.H. for consent to an expenditure of £1,905 in connection with the provision of new day rooms and a small ward at the institution.

BEDWAS.—A new secondary school is to be erected at Lower Machen, at a cost of £22,000; and a new infants' school on the Mary-street site at Bedwas.

BEEDE (SUSSEX).—The Committee of the Village Institute has decided to erect a new hall.

BIRMINGHAM.—The Corporation propose to undertake drainage works and extensions at various cemeteries and to construct a lodge at Cannon Hill, at a total cost of £14,000.—Extensions are to be carried out at the Rubery and Hollymoor mental hospitals, at a cost of £6,000.—Pavilions, conveniences, and improvements are proposed at various parks, at a total cost of £22,245.—A scheme has been prepared for the extension and rebuilding of the Rotton Park salvage depot, at a cost of £78,000.—Further contracts in connection with the Hockley Valley drainage, at a cost of £205,000, have been let, and it is proposed to arrange for the reconstruction of the Hockley main sewer, at a cost of £124,000, and the reconstruction of sewers at Summer-lane and Hockley-hill, at a cost of £35,400.—A sewerage scheme at King's Heath is to be undertaken, at a cost of £9,000.—The provision of further lavatory accommodation in various parts of the city is being considered.—A further extension at the Moseley secondary school is to be undertaken, at a cost of £25,000.—Another block is to be built at the Billesley elementary school, at a cost of £15,000.

BLACKPOOL.—The M.H. are to hold an inquiry into an important scheme for preserving the cliffs at North Shore, for the T.C., who want to borrow £73,600 for the purpose.

BOURNEMOUTH.—The Corporation have asked the Borough Engineer to prepare plans for the construction of a bathing jetty.—Tenders are to be invited for the enlargement of the Stourfield elementary school.—The E.C. are considering the erection of a new elementary school.—It is proposed to erect police barracks on a site adjoining the Lansdowne Council school.

BOSTON.—The M.H. has given sanction to the proposal of the Holland C.C. to build central offices in the Sessions-house yard. The estimated cost of the work is £30,000.

BRADFORD.—Twenty acres of the Clock House estate are to be leased by the Corporation to the trustees for the erection of a new grammar school.—The Board of Control are to be asked to give approval to the scheme for the proposed new institution for mental defectives at Westwood.—The M.H. have sanctioned a loan of £20,000 for the White Abbey improvement scheme.—A site adjacent to Bradford Moor has been purchased for a housing scheme and street works are to be undertaken, at a cost of £3,320.—The M.H. has sanctioned a scheme to cost £83,200, for the erection of 180 houses by direct labour, at the Thornton estate.—Land at Wrose-road is being acquired, at a cost of £8,748, for a housing scheme.—The City Architect has prepared the lay-out of the sixth section of the Ecclestone housing site.—A convenience is to be erected at Saint Green, Great Horton.—The Housing Committee are nego-

tiating with the Cleckheaton Colliery Co. for land adjoining the Bierley estate, for a housing scheme.

—The Housing Sub-committee has arranged with Mr. J. Bickerdyke, of Grove House, Bolton, for the erection of 200 houses on the Grove House Estate.—The M.H. has sanctioned borrowing powers for £74,052, for the erection of 166 working-class dwellings on the Lower Grange Estate.

BRAINTREE.—The R.D.C. has accepted tenders for the erection of houses in the following parishes: Stisted 12, Blackmore End, Wethersfield, 6; Wethersfield, 8; Terling, 8; Rayne, 8; Finchingfield, 6.

BRENTFORD.—Stables at Carville Hall are to be converted into three cottages, at a cost of £900.

BRIGHTON.—The M.H. has held a public inquiry into the T.C.'s application for sanction to borrow £100,000 for the purposes of improving the Spa and also the Parade.—The T.C. propose to erect a large concert hall and dancing room at the Spa and improve the cafe and ten lock-up shops facing Marine-drive.—On the Victoria-terrace estate, it is intended to construct a large concert and dancing hall, a cafe, bathing pool, and sunken gardens.

BRIDGE.—The U.D.C. has received a notice from the County Council that they will make provision for new schools.

BRIGHTON.—Funds are being raised for alterations, &c., to the Royal Alexandra Hospital for sick children. The cost of the work is estimated at £5,000.

BURNLEY.—The B.G. propose to alter and improve the kitchen at Primrose Bank Infirmary, at an estimated cost of £1,500.

CARSHALTON.—The United Methodists are to erect a new church in Ruskin-road.

CHADDERTON.—The U.D.C. propose to build fifty houses on the Burnley-lane site and twenty houses on the Denton-lane site, for which plans, submitted by the Surveyor, have been approved.—Plans submitted by A. Turner, architect, 11, Clegg-street, Oldham (on behalf of the Elk Mill Co.), for a new cotton mill, off Broadway, have been approved by the D.C.

CHEADLE.—The Rough Cast Building Co., 23, King-street West, Manchester, propose to erect a large number of new semi-detached houses on the Grange estate, Cheddle-road, Cheddle Heath.

CHERTSEY.—A new housing scheme at Pyrcroft-road has just been commenced, involving a sum of £25,430. Messrs. Lacey & Sons, of Luton, are the contractors; and Mr. W. J. Parker, the architect.

CHORLEY.—The Governors of Chorley Hospital have decided that a new site should be secured for the erection of a hospital, which is estimated to cost from £40,000 to £50,000, in lieu of a previous proposal to make an extension of the existing institution.

CHORLTON-CUM-HARDY.—The Manchester E.C. recommend the erection of a permanent and larger school to replace the temporary one at Oswald-road, to accommodate 480 scholars as against the present accommodation for 300 scholars, at an estimated cost of £14,000. Application is to be made to the M.H. for sanction to borrow the money.

COALVILLE.—The M.H. has given the U.D.C. sanction to borrow £46,000 for the erection of 76 houses and streets.

CORK.—The City Engineer recommends the T.C. to build a new concrete bridge at Carroll's Dock instead of repairing the old bridge, at a cost of £2,500. The Commissioner decided that sanction be asked from the Local Government Department to raise a loan for the purpose.

CORRY.—A school is to be erected in Corry, near Belleek, co. Fermanagh.

COVENTRY.—The Church of St. Barbara, Earlsdon, is to be extended, at an estimated cost of £20,000.

PRESTON.—The C.B. passed plans: D. Ainsworth, ten houses, Raikes-road; A. Swarbrick, twelve houses, Rose-avenue; F. Howarth, sixteen houses, St. Gregory-road; J. Nightingale, fourteen houses, Plungington-road (two), Linton-street (eight), Sedbergh-street (four).

ROSCOMMON.—The C.C. has decided that the Boyle Workhouse buildings, or such portion of them as may not be required for the use of a hospital, be made available for use as an agricultural or technical school and that an industrial school for boys under the charge of some religious community be established in either Strokestown or Castlereagh.

ROXTON.—The Lancashire E.C. has sanctioned the erection of a school at a cost of £23,623.

RUXFORD.—The D.C. has approved plans prepared by the Surveyor for the erection of an assembly hall to the baths in Bridge-street, at an estimated cost of £950.

RUTHVEN.—The U.D.C. has received sanction from the M.H. to the borrowing of £18,500 for housing purposes.

ST. ALBANS.—The Herts E.C. has agreed that, subject to the approval of the B.E., the site of about 4 acres adjoining Hatfield-road be purchased from the St. Albans Grammar School Governors for £1,680, for the proposed central school.

SCARBOROUGH.—The T.C. has approved an expenditure of £14,180 for the construction of a sea wall and road way at the base of the cliff of the South Cliff Gardens on the South Bay.

SHEFFIELD.—The "Yorkshire Stingo" public house, Division-street, has been acquired for the Central fire station extension scheme. The Electricity manager is to prepare plans and estimates for canteen, stores and sewerage in connection with the Needsend generating station. Land in Orchard-place is to be acquired for the erection of a maternity and child welfare centre,

and the city architect is to prepare plans for a building to cost about £20,000. The West Riding E.C. propose the erection of a new school at Woodsetts for 200 children. Plans have been prepared for the erection of a new R.C. church at Frith Park. The T.C. has received formal sanction from the M.H. to the borrowing of sums of £4,275 and £75,392 for the purchase of land and the erection of houses, respectively. Authority has been given for certain repairs to houses being carried out, at an estimated cost of £110.

SIREWSBURY.—The Borough Surveyor is to prepare plans for forty houses to be erected at Crowmere-road. The bridge over Radbrook is to be widened at a cost of £825. A concrete retaining wall is to be constructed on the river promenade at a cost of £1,580.

SHIPLEY.—The U.D.C. are to find another site for the erection of cottage baths for the Windhill district.

SKEGBY.—The R.D.C. has received the M.H. approval of a loan of £17,000 for the proposed sewage disposal works at Bldworth. The M.H. has also approved plans for 30 houses.

SOUTHEAST-ON-SEA.—The C.B. passed various plans, including four shops, four flats and nine garages, and amended plan showing openings in party walls between proposed shops in London-road, for G. A. Spencer; eight houses, Victoria-road, for E. Wingrave; warehouse, Hildaville-drive, for G. A. Spencer; 11 houses, Coleman's-avenue, for R. Webster, and warehouse, rear of 111, 112 and 113, Eastern Esplanade, for Hood & Vale.

SOUTHPORT.—Inquiry has been held into the application by the Corporation for sanction to borrow £3,100 for the purpose of completing and re-modelling the Victoria Baths, on the Promenade, to the plans prepared by the Borough Surveyor.

SOUTH SHIELDS.—On behalf of Messrs. Henderson Bros., Mr. F. W. Newby has prepared the lay-out for the erection of 104 houses on an estate south of Harton-lane.

STOCKSBRIDGE.—The Education Sub-Committee has approved amended plans for the erection of a new elementary school at an estimated cost of £35,000.

STROKE-ON-TRENT.—The T.C. has accepted a tender amounting to £3,111, for the erection of six houses in Hill-street, Burslem.

STRETFORD.—The Lancashire E.C. has sanctioned the erection of a secondary school for boys, at a cost of £63,973.

SUNDERLAND.—The T.C. has approved the report of the Health Committee that application be made to the M.H. for sanction to the borrowing of £4,306 15s. for the construction by the Borough Engineer of the remaining seven of the 68 houses at Spark Farm. The Markets and Baths Committee recommend the building of a sea-water swimming pool on the rocks at Roker, in front of the new sea wall and promenade, at an estimated cost of from £25,000 to £30,000.

SWANSEA.—A site for the erection of a new Catholic church at Town Hill has been granted by the Corporation.

TAMWORTH.—An application is to be made to the Miners' Welfare Fund Committee for a grant towards the provision of pithead baths at Pooley Hall Colliery, Polesworth.

TOTNES.—The R.D.C. passed plans for a new chapel and other alterations at Morley House, South Brent, for Zion Abbey authorities, Chudleigh.

UPPINGHAM.—The R.D.C. has decided to erect 12 houses.

WALLASEY.—The Housing Committee has decided, subject to the approval of the T.C. and the M.H. to acquire a site in Somerville Ward on which they will be able to erect 270 working-class houses. Negotiations are also in progress for the purchase of another site on which 250 houses can be built.

WALSALL.—The Governors of Queen Mary's School, Walsall, have passed plans for a new school to be erected on the Mayfield estate, Sutton-road, on a site which has been acquired by the governors.

WANTSWORTH.—The L.C.C. recommend the borrowing by the B.C. of £3,325 for housing purposes.

WARWICK.—Messrs. F. P. Trepass & Son, architects, have prepared plans for extending the large hall at Myton School. Mr. Trepass, the architect, has been asked to prepare plans for the erection of sixty houses on the housing estate. Messrs. J. Margetts & Son are being asked to prepare plans for land at the entrance to the housing site, with a view to sale for the erection of shops. Mr. Trepass, the architect, has prepared plans for furnishing the new committee room at the Town Hall, and estimates are to be obtained.

WORKING.—The B.E. has approved sketch plans of the proposed new junior mixed and infants' school at Westfield, submitted by the Surrey E.C.

WOLVERHAMPTON.—The T.C. recommend that application be made to the M.H. for sanction to borrow £16,369 for the erection of 42 houses on the Old Heath Colliery estate. The T.C. resolved that the Housing Director be authorised to complete by direct labour the work under Poole Bros.' contract for the erection of 136 houses at Newbridge, at an estimated cost of £11,680.

WOLVERHAMPTON.—The Lightfoot Refrigeration Co., Ltd., are to prepare plans and specifications for the proposed new cold stores, abattoirs and ice-making plant. The Council also resolved that a piece of land containing 2 acres, situate at the Low Hill estate be offered to the E.C. of the Staffordshire C.C. as a site for the erection of a school. Plans passed: A. J. Gough, 12 houses, Marchant-road and Clark-road.

WORTHING.—During September plans for the erection of 47 dwelling houses and 21 other buildings, representing a total estimated constructional cost of £45,165, were passed by the Corporation.

Mr. N. Gerver, timber merchant and importer, of 8-10, Mare-street, Hackney, E.S., has just compiled a new list, No. 18. Builders writing for this will receive some "handy blotters."

TRADE NEWS

The D. and S. Saw Doctor's Handbook.

That it pays to purchase a good, and possibly expensive, saw is shown by the statistics of a year's working given in the "D. and S. Saw Doctor's Handbook," published by Messrs. Crabbe and Sanderson, Ltd., price 2s. 6d. Herein we find that the difference in running expenses of a 36s. and a 57s. saw amounts, even at a conservative estimate, to £24 10s. in a working year. The handbook is a comprehensive, practical guide and an authoritative treatise on the care, repair and fitting of saws of every description.

Mantels.

The wooden mantelpiece, period or otherwise, will have many devotees who consider that it possesses a touch of distinction which those of other materials can never have. In Book No 5 to Bath Artercraft, Ltd., illustrate a wide range of mantels in many charming styles, prominent among which are some Adam designs of delightful quality. The firm will be showing these and an entirely new range at the Building Trades Exhibition in Birmingham in February, but particulars can be obtained now from the studios in Lower Bristol-road, Bath.

Mastic Asphalt.

Mastic asphalt for road surfaces, roof coverings, dampcourses, &c., should be refined, never varying in consistency, and contain a correct proportion of bitumen in order to perform its function to the best advantage. Even with these merits it is essential that it should be laid by a specialist at the work. The Limmer and Trinidad Lake Asphalt Co., Ltd., is in the exceptional position of having fifty-four years' experience of asphalt work. The erection, extension, repair and reconstruction of buildings with which this company has been associated have provided ample opportunity to prove the most satisfactory methods of manufacture and application of mastic asphalt. Windsor Castle, and Buckingham Palace are among the list of buildings for which the firm has contracted. Particulars can be obtained from the Chief Offices at 34, Victoria-street, Westminster, W.1.

THE SCOTTISH BUILDER

HOUSING PROGRESS IN SCOTLAND

The following figures show the progress that has been made in State-aided housing schemes in Scotland to the 30th September, 1925:—

	Completed.	Under Construction.
1919 Act ..	25,043	495
Private Subsidy Schemes ..	2,324	—
Slum Clearance Schemes ..	1,747	3,226
1923 Act ..	4,435	5,945
1924 Act (Local Authority Scheme) ..	273	2,910
	33,822	12,576

Of the total number of houses completed and under construction under the 1923 Act, 3,148 are by the local authorities, and 7,232 by private enterprise.

NEW BUILDINGS IN SCOTLAND

Buckie.—HOUSES.—The Town Clerk has submitted a communication from the Board of Health approving of the erection of 48 £300 houses.

Aberdeen.—COTTAGES.—The District Committee has approved of a report by the Roads Sub-committee recommending the adoption of a scheme for the erection of six blocks of cottages at Belhelvie village, at a total estimated cost of £4,902.

Falkirk.—VARIOUS.—The Dean of Guild Court passed plans: The Falkirk Iron Co., Ltd., to erect at Bankside, at an estimated cost of £6,200, four flatted blocks, each containing four houses, and a girls' clubroom, costing £400, within their works. The Corporation secured warrant to reconstruct property in Manor-street, at a cost of £350, for an electric sub-station.

Stirling.—A contract will probably be placed in January for the building of the new blocks for the Stirling Royal Infirmary. An expendi-

ture of between £70,000 to £80,000 is provided for by the plans of Mr. James Miller, F.R.I.B.A., 15, Blythswood-square, Glasgow.

Paisley.—BANDSTAND.—Paisley Town Council has approved the application of the sisters of the late Bailie Andrew Fisher for the erection of a bandstand in St. James's Park in memory of their brother.

Bathgate.—PARK.—The Burgh Surveyor submitted to the Town Council lay-out plans of the new public park at Kirkton. The park extends to about 18 acres, and is situated near the Edinburgh-road. The total cost of the lay-out is estimated at £7,533.

Berwick-on-Tweed.—BRIDGE.—Work has begun on a new reinforced concrete bridge over the River Tweed. The cost is £160,000.

Aberdeen.—HOUSES.—The Plans Committee of the Town Council has approved plans, to the cost of £112,560, for the building of the Council's 268 dwelling-houses on the Hilton estate. Other plans were approved also for the erection of dwelling-houses and for alterations to existing buildings, to the value of £14,631.

Paisley.—HOUSES.—The Dean of Guild Court has passed plans, on the application of the Town Council, for 57 blocks of houses, comprising 214 houses, at Lochfield.

Leith.—EXTENSION.—For the purpose of converting an adjoining building into an addition to the college, the Leith Nautical College Committee has opened a building fund, to which £1,836 had been promised or paid.

Montrose.—BRIDGE.—A joint conference has been held between Forfar County Council and Montrose Town Council with regard to the provisional order for a new bridge.

Dunbar.—EXTENSION.—The Town Council has acquired additional land on Belhaven-road for an extension to the gas works. The undertaking will involve an outlay of £6,500.

Obituary.

The death has occurred at Hawick, Scotland, of Mr. Robert Blaikie, architect and master of works.

BUILDING TRADE WAGES IN SCOTLAND.*

The following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

THE BUILDER

JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

XXIX.—No. 4,318

NOVEMBER 6, 1925

THE PRESIDENT'S ADDRESS

THE address of the President of the Royal Institute of British Architects in opening a new session is always the occasion for the stimulation of interest in the affairs of the Institute and the hope of arousing fresh interest in architecture as an art. The address is a "learned discourse" on the art to the neglect of more practical matters but none the less vital matters of great importance to the architect, or it may be the converse, and yet, again, a happy mixture of both—a practical address imbued with a spirit of enthusiasm for a great and dominating art. Those who had the pleasure of listening to Mr. Dawber's address last Monday may read it in our columns this week, will, we think, find that the President has risen to the occasion and in this address as President of the Institute he has performed a service to those he represents, as well as to the art he so dearly follows. Mr. Dawber appears to think—and if he is heartily agree with him—that the opening address of a session of a great and representative body of architects should not be confined to the consideration of æsthetic questions, but that the profession of which he is the titular head look to him for some statement on the general policy of the Institute at its last meeting. Be that as it may, the address not only gives some idea of the progress being made—and quite satisfactorily made, so far as we can judge—with matters of exceptional importance to a large body of practising architects, such as training and education, and with questions of considerable public importance, but it is an admirable contribution to the subject of the advancement of architecture as an art. On this subject the President is well entitled to speak, and his remarks will be widely read; and if, as he says—we agree with him—that two-thirds of mankind desire to be architects and are always on the look-out for a lead, his opinions on the subject of architectural art should be of real help in the cultivation of the public art sense which he believes is so important, if for no other reason—and, of course, there are other reasons—than to create greater interest and appreciation on the part of the public and new inspiration to the efforts of architects and craftsmen. Whether or not the "public" are beginning to take an interest in "architecture," as the President thinks, may be a question, though much depends on the "public" referred to—the "architectural public," and we should be glad to think that the general public are beginning to notice what they think the merits or failings of architecture, for this would be, as the President remarks, "one great step towards their not only obtaining but obtaining architecture worth having." What we, however, look for is more interest on the part of the public in well and economically planned and well-built structures of good as distinct from bad building—and if this is what the President means then we agree with him that amongst the business people, at any rate, an appreciation of architecture is being developed and we can hope that through them and by means of their improved taste of the general public and the better training of architects, we shall in time get better and better results in our towns and cities. In this improved taste, we can hope for much more, for we shall certainly find that the general public will not tolerate the disfigurement of town and country buildings, our villages and cities, our highways and byways with vulgar advertisements. What can be more ridiculous than the expenditure of time and money on the erection of advertisements in our towns and cities, which are immediately

disfigured and their architectural features hidden by signs and letters of any shape and size! As Mr. Dawber pertinently remarks: "A strident siren deafening our ears would not be tolerated for one moment, yet advertisements that equally offend the eye are accepted without protest." Surely we have a right to demand some control of such an offence against good taste! "Think," says Mr. Dawber, "what our streets would be if all the names and advertisements were confined to the fascia board only—all, so to speak—hung on the line! What a comparatively agreeable picture gallery they would become!" While the general public have shown a surprising apathy in the matter, it is the owners of buildings which are disfigured who are chiefly to blame, though we are glad to acknowledge that the more enlightened refrain from exercising their present right to disfigure their premises in this way. Should owners or tenants of buildings be allowed indefinitely to disfigure our streets and towns and offend public taste in this way? The mere statement of the case would appear sufficient to show the absurdity of such freedom, especially as the control or limitation of freedom to do as one pleases is part of the machinery of government when such freedom is inconvenient or undesirable, and is against the public well-being. Though we refer to the apathy of the general public towards this abuse, we may ask what action have architects taken to control this riotous freedom on the part of building owners and tenants to spoil our public buildings and offend public taste? There can be few architects worthy of the name who are not agreed that it is a monstrous abuse of the rights of ownership to disfigure our streets as they are disfigured to-day, and yet, beyond individual criticism, little has been done by the profession to control the evil. We believe public opinion would be largely sympathetic towards a movement directed by architects against the increasing disfigurement of our streets and buildings, and that the efforts which are being made to extend the public appreciation of architecture would be greatly accelerated by an appeal for the protection of our streets and buildings from uncontrolled and unlicensed advertising, which is "an offence to the eye and an outrage upon public taste." Mr. Dawber has certainly done his part, as President of the Institute, and we hope his year of office will see a rapid growth of the movement to control this form of advertising, even if we do not see the fulfilment of the complete hopes of most people of good taste and common sense.

With the President's remarks in reference to our villages and country towns we are in complete sympathy, and no one is better qualified to speak on the subject than Mr. Dawber. As he says, we build magnificent roads and we do many other things which make for the material comfort of life, and yet with all this we neglect the æsthetic side, the cultivation of the beautiful and all that gives real and lasting pleasure to those who dwell in the country. We may well marvel, with the President, at our folly in allowing old work which tells the history and tradition of our country in towns and villages throughout the land being swept away without protest. It is pathetic, it is ludicrous that magnificent trees should be cut down so that corners can be rounded and the entrance to our villages vulgarised by oil pumping stations and advertisements: it is pathetic because we cannot replace these remains of a past time, and it is ludicrous because there is no need for it. The need, as the President said, is for a lead, and we therefore welcome his wise and timely words.

NOTES.

Architectural Criticism.

WE do not know whether we correctly understood Sir Reginald Blomfield's remarks at the opening meeting of the R.I.B.A., in seconding the vote of thanks to the President, but we do not agree with him if, in referring to the "caustic criticism" by the younger brethren of work of their colleagues, he said it was "unprofessional and unsportsmanlike" to write articles for the Press with the object of educating the public. We know from personal experience something of the difficulty if not the impossibility of frank criticism of the work of living architects, and our contemporary *Architecture* has shown how meaningless criticism generally is when it is "safe," and how opinions cancel out when there is a nice balance of praise and blame. It may be, as Sir Reginald says, that the architectural critic is not always competent to criticise; but it is more likely to be well-informed and instructive, and therefore more useful, when it is undertaken by an educated architect instead of a layman. Unqualified praise or blame by the unqualified layman may be more acceptable to some, but surely there is nothing unsportsmanlike in the unbiased criticism of a trained architect! It is perhaps as well, moreover, to point out that it might be as unsportsmanlike to criticise the sayings of a professional critic as it is for the said critic to criticise the work of his professional brethren.

The Eisteddfod Competitions.

WITH Swansea as a place of meeting the Eisteddfod next year should be a great success. The developments in the two great Welsh towns Swansea and Cardiff have been amongst the best in the Kingdom, and a gathering like the

Eisteddfod should add something further to the prosperity of Swansea. A well-produced pamphlet just issued gives the programme of the festival and architects will find a special interest in it from the competitions announced for architectural subjects. For a design for a National Parliament House for Wales an award of £100 is offered to that placed first. For a design for a street façade to a large store £25 is the prize; the subject only applying to competitors up to 21 years of age, and the prize being given by the South Wales Institute of Architects, Western Branch. For a set of measured drawings of architecture, no age limit, £25 is to be the prize, and it is to be given by Mr. Ernest E. Morgan, A.R.I.B.A., the Borough Architect of Swansea. These competitions are to be settled by the award of Mr. Arthur Keen, F.R.I.B.A. It is to be hoped a good result will follow these announcements.

Waterloo Bridge.

WE are glad that Sir Reginald Blomfield took up the cudgels once more on behalf of Waterloo Bridge in his speech at the Institute on Monday. He did not qualify his admiration for it as one of our finest public monuments, and his earnest appeal for its preservation should add appreciably to the weight of opinion which its possible destruction has evoked. If anything were needed to emphasise its real beauty it would be found in the utilitarian structure put up to relieve its traffic and painted—such a green!

Restrictions on Tendering.

ON this subject we have received the following non-committal communication from the R.I.B.A., which, in view of its interest and importance, we give on this page: "Several requests having recently been received for advice as to the attitude which should be

adopted by an architect when faced the restriction on tendering which from the refusal of contractors to be in competition with certain 'prescribed' firms, the Council of the R.I.B.A. recommend that the architect, when informed by a contractor or firm of contractor their tender is conditional upon omission of the names of certain 'scribed' firms from the list of invited to tender, should convey information to his clients and act upon instructions which he receives."

The Street Frontage Medal.

ONE of the most interesting features of last Monday evening's very successful opening meeting of R.I.B.A. was the presentation of the medal for the best London Street Frontage of the Year to Messrs. Greenaway & Berry, whose Auctioneers' and Estate Agents' Institute in Lincoln's Inn was selected for that distinction. We have already recorded our appreciation of this excellent building. Mr. Green acknowledged the award on behalf of himself and his partner in an appropriate speech in which he generously gave credit to his clients and the builders, whose whole-hearted co-operation, even the best of designs are liable to lose something of their quality.

Stained Glass in Old Churches.

IT is a pity that the preservation of old churches should become a subject of discussion. A correspondent of the *Times* deprecates even "the modern glass" being placed in churches, and quotes the late William Morris as having decided, after "a few new stained glass windows never to do another. This decision seeing the number of windows executed by the firm all over the country, certainly not adhered to. This s

The Northern Architectural Association War Memorial.

Designed by Mr. F. N. WEIGHTMAN, M.A. Executed by Mr. J. M. W. REID, A.R.C.A.

ous worship of the old becomes more
ess very tiresome, and has no justifi-
tion in ancient usage, when a healthier
tude, less distrustful of itself, did not
e its own contribution to beauty, as
een in the different periods of work
ented in our old churches. A good
ow is as desirable now to add beauty
an old church as it is to a new one,
we think the writer of the letter has
e acquaintance with the indifferent,
ventional glass with which some
our churches have been filled
n with the fine examples of modern
s now being produced. As a matter
act good modern glass will adorn any
rch whether new or old, and the
er, when we can get hold of it, is
ably better! There is no "funda-
tal truth" whatever in supposing
clear glass is better than fine trans-
nt stained glass, and the writer's
ys would appear to have been built on
depressing character of the glass
oduced into our churches in recent
s, instead of on the better artistry
e more personal work of the artist.

The Best Modern Glass.
We are disposed to think,
far from deprecating modern
glass, that now, when
methods of craftsmanship
so much improved and the art of
s becomes more and more distin-
hed from the poorer substitute, we
likely to see a great advance in the
through new vision and interpre-
on. With finer material resources at
disposal, and an artistry once more
fine and creative, we may expect to
the recovery of the tradition which
es the good work of any time, with
addition of all the new interest and
nture which our own time will
ess through it. If our ancient
ches are not to share in this, they
me mere relics of the past, and it is
ssary that the message of beauty
ld still flow through them lest, all
nuity of life having perished out of
s, they become mausoleums.

Metal Buildings.
THE recent disastrous fire
in premises at Wimbledon
having caused the corru-
iron part of the building to become
ot raises the question whether such
aterial should ever be allowed, even
or a temporary licence, for enclosing
try buildings. Corrugated iron is
missible under the London Building
as a roof, but it would be safer if it
allowed as a roof covering only
a roof of fire-resisting material.
is a point deserving the attention
ose engaged in drafting the proposed
for amending and consolidating the
ent Acts.

Printing the Interim Report.
THE Secretaries of the
National Painters' and
Decorators' Joint Council
point out, in a letter which
we publish this week (p. 679),
the public may help to alleviate the

severe unemployment which is experi-
enced in the painting trade at this time
of the year by putting in hand the
interior decorative work which is com-
monly held over to the spring. They
show convincingly that to commission
such work during the slack season is in
no sense an act of philanthropy; it is
good business policy. The suggestion
is a sound one, and we hope that it may
be widely acted upon.

The Sermon and Art.

THE recent criticism of the
Archbishop of Canterbury
on present day preaching,
which he regarded as often
betraying less knowledge than was pos-
sessed by the ordinary person, who was
better informed, has a direct bearing in
the case of art, where the clergy are often
less informed than the man in the street.
A correspondent writes: "The art
patronised by many of the clergy is often
deserving of as much criticism as the
sermon, and suffers from the same defect.
It is not at all unusual to-day to hear a
cleric commending the windows recently
erected in his church as so good because
the artist supplied him with fourteenth
and fifteenth century windows to order!
It is partly due to lifeless substitutes

for real vision and craftsmanship that
art has drifted away from the church and
the congregations along with it. What
a power art might be to the churches
again were windows and other ornaments
more often the work of artists! Yet it
is the case that first-hand experience and
imagination is often regarded as odd,
or even unsound."

Corrosion of Metals.
DR. R. S. HUTTON, Director
of a Research Association
for investigating the pro-
perties of metals, other than

iron, has offered to supply the R.I.B.A.
with concise digests of results of research
into the corrosion of metals by the
atmosphere. Such information cannot
fail to be of service to architects, who can
rarely find leisure for pursuing these
investigations. Roofs, gutters, water
fittings and other metal appliances used
in building deserve more scientific atten-
tion than they have generally received,
both for guidance in selecting materials
and means of preventing corrosion. The
Institute is to be congratulated upon
the success of this branch of research
which, it may be remembered, was
initiated by it some years ago.

New Premises for Spillers' Industries, Ltd., St. Mary Axe, London, E.C.:
Main Entrance. SIR EDWIN COOPER, Architect.

GENERAL NEWS

Resignation.

Sir Aston Webb, G.C.V.O., C.B., R.A., has resigned his position as an Alderman of the Royal Borough of Kensington, owing to the state of his health caused by the motor accident in which he was involved eighteen months ago.

Change of Address.

Mr. R. W. Knightley Goddard, architect, of 19, Buckingham-street, Strand, W.C.2, has removed to 12, Great Queen-street, Kingsway, W.C.2.

New Rhyl Bridge.

The plans of Mr. Whitley, the Flintshire County Surveyor, have been selected for a 40 ft. pier bridge at Foryd Harbour, Rhyl, joining Flintshire with Denbighshire.

Wooden Stands Surveyor.

The City Corporation, in order to ensure the stability of wooden stands and other erections provided for the accommodation of spectators during the procession on Lord Mayor's Day, has instructed Mr. G. H. Lovegrove, F.R.I.B.A., F.S.I., the Dangerous Structure Surveyor, to supervise their erection.

Tyne Tube Proposal.

Mr. E. W. C. Kearney, engineer and managing director of the Kearney High Speed Railway Co., Ltd., proposes to connect North Shields and South Shields by a tube railway under the Tyne at an estimated cost of half-a-million pounds.

Irthlingborough's New Bridge.

The Northamptonshire County Council has approved the plans of Mr. J. A. Gotch, F.R.I.B.A., for the new bridge to be constructed over the river and railway at Irthlingborough.

St. Thomas's Hospital Memorial.

The foundation stone of the new college house extension and students' club, which is being erected as a memorial to eighty-one students and members of the staff of St. Thomas's Hospital who fell in the war, was laid recently. Situated opposite the main hospital building in Lambeth Palace-road, the new club, in addition to affording opportunities for sport and recreation, will provide seventy-two bedrooms for the resident staff and students. Mr. W. H. Currey, F.S.I., L.R.I.B.A., of 37, Norfolk-street, W.C.2, is the architect.

Excavations at Knossos.

The reconstitution work on the site of the palace at Knossos, under the supervision of Sir Arthur Evans, has revealed an intricate plan and much highly artistic decorative work; the whole central section of the west wing has now been effectively restored. A sacristy is one of the remarkable features uncovered.

Welsh National Museum.

The National Museum of Wales, at Cardiff, is appealing for £55,000 for extensions.

Rolleston Hall.

Rolleston Hall, a seventeenth-century mansion near Burton-on-Trent, is to be pulled down. It has been acquired by a local farmer, who proposes to demolish it and with the material erect cottages which are badly needed in the district.

South-West of England University.

The University College of the South-West of England, Exeter, is appealing for £100,000 to build new premises on the Streatham Hall Estate.

St. Mary's Hospital, Plaistow.

£25,000 is wanted to provide a new out-patients' department at the above hospital.

New Ely Factory Opened.

A new beet sugar factory, erected at a cost of £300,000, was opened at Ely recently.

Ancient House Burned.

Built in the time of Cromwell, an old rectorial manor, known as Castle House, at Deddington, Oxon., was destroyed by fire recently. It was filled with valuable furniture of the period, and contained much genuine Tudor panelling.

Bolton War Memorial Fund.

Bolton War Memorial Committee are appealing for £10,000 to erect a sculptured memorial, 35 ft. high, in Victoria-square (to the selected design of Messrs. Bradshaw, Gass & Hope), and to convert the portico of the Town Hall into a Hall of Memories.

London Housing.

In a review of the housing activities of the London County Council it was recently stated that the Council had approved for purposes of subsidy the erection of 1,180 houses, and had themselves erected 9,638 houses since the war. The Council had authorised steps for the provision of 20,000 houses, apart from dwellings erected in connection with clearance schemes, and upwards of 12,000 houses were included in the programme of work now in hand. The Council had now in hand schemes for the clearance of nineteen unhealthy areas, comprising 88 acres; this involved the displacements of 25,000 people.

Paris Exhibition Awards.

The awards of the International Exhibition of Decorative Arts have been announced. France is first, Czechoslovakia second and Great Britain third with 14 certificates *Hors Concours*; 32 Grands Prix; 45 Certificates of Honourable Mention; 72 Gold Medals; 86 Silver Medals; 52 Bronze Medals, and 38 mentions.

The Mersey Tunnel.

Liverpool City Council has approved the transfer of the Pier Head baths site from the Baths Committee to the Mersey Tunnel Joint Committee. The site is to be immediately placed in the hands of the Mersey Tunnel engineers, who will prepare it for the first work of sinking a shaft.

Brighton Aquarium Plans.

Brighton Town Council has adopted amended plans for the reconstruction of the Aquarium, at a cost of £91,000. While retaining the main part of the existing tanks, new features, including a public hall, a Continental cafe and a series of terraces accessible from the Marine-parade above, are to be provided.

Designs for Marble Memorials.

The prizes in the different sections of the first competition for designs for marble memorials, promoted by the Marble Merchants' Association have now been announced as follows:—Wm. H. Bennett, 19, Collins-place, Edinburgh, 2nd prize, £3; A. Stokely, 7, Tissington-street, Rotherhithe, London, S.E.16, 3rd prize, £1 10s.; H. G. Towndrow, 4, Wareham-street, New North-road, London, N.1, 1st prize, £5, 2nd prize, £3; Alfred Borrowdale, Durham-road, Sunderland, 1st prize, £5, 2nd prize, £3, 3rd prize, £1 10s.; Fergus J. Currie, Dryfe-road, Lockerbie, 2nd prize, £3; J. H. Rudd, 7, Coronation-street, Barnstaple, 2nd prize, £3, 3rd prize, £1 10s.

Northern Architectural Association.

The Teesside branch of the Northern Architectural Association held their autumn meeting at West Hartlepool recently. The party first visited St. Hilda's Church, Hartlepool, and inspected the restorations now in course of progress, and then proceeded to Messrs. Robert Lauder & Co., Ltd.'s, joinery works. Colonel Reavell presented Mr. Forbes' prizes, the winners being C. E. Westmorland, Middlesbrough; L. W. Pool, Darlington; R. M. Archibald, Middlesbrough; and R. G. Bell, Middlesbrough.

The tablet of Hopton Wood stone which has been placed above the Library fire-place at the headquarters of the Northern Architectural Association, Higham-place, Newcastle, was recently unveiled by Colonel H. H. S. Morant, D.S.O., commanding Northumberland Infantry Brigade, and dedicated by Bishop Welldon, D.D., Dean of Durham. The tablet was designed by Mr. F. N. Weightman, M.A., Librarian of the Association, and executed by Mr. J. M. W. Reid, A.R.C.A., of Newcastle.

COMPETITION NEWS

Royal National Eisteddfod of Wales, Swansea.

We have received a copy of the program of the Royal National Eisteddfod of Wales, which includes particulars of the competition in the Architectural Section. Mr. Arthur K. F.R.I.B.A., is the assessor.

Design for a National Parliament House, Wales. No age limit. Prize £100.

Design for a Street Façade to a large street (Competitors not to be over 21 on January 1, 1926.) Prize £25, given by the South Wales Institute of Architects, Western Branch.

Set of Measured Drawings of 'Architect's Office', Swansea. No age limit. Prize £25, given by Mr. E. E. Morgan, A.R.I.B.A., Borough Architect, Swansea.

Intending competitors should send to the General Secretary of the Eisteddfod, Mr. Talog Williams, 24, Goat-street, Swansea, between May 1 and May 10, 1926, the entry form C, given in the Eisteddfod program.

The Incorporation of Architects in Scotland.

The Incorporation of Architects in Scotland will award the following prizes and students during 1926: (1) Rowand Anderson Medal, £100 for a design for a City Art Gallery Museum; (2) Rutland Prize of £50 for study of materials and construction; (3) of £10 to £15 for third year students at schools of Architecture in Scotland; (4) Maintenance scholarship of £50 per annum for 3 years in diploma courses at a Central Institution in Scotland. The leaflet of conditions is free on application to the Secretary of Incorporation, 15, Rutland-square, Edinburgh.

Competitions Open.

Particulars published in "Builder."	But in
Model Dwellings, Russia.	Sept. 4 . . . No
Town Hall, &c., Pretoria. Open to architects residing in South Africa or Registered under Architects' Act, of 1909, Transvaal. Assessor to be appointed by R.I.B.A. Premiums: £250, £150, £100.	— . . . No
Argentine Institute. Premiums 10,000, 6,000, 4,000, 3,000, 2,000 gold pesos. Apply parties., 35, Old Queen-street, S.W.1	April 24 . . . Da
New Buildings for Liverpool College, Mossley Hill. Sir Giles Gilbert Scott, R.A., Assessor. Premiums: £500, £300 and £200. Apply to J. H. Lintern, Secretary, Liverpool College, Sefton Park-road, Liverpool	Aug 7 . . . J
Houses for Smaller Middle-Classes and Intellectual Workers. Held under auspices of International Federation of Building and Public Works. Prizes: 1st, 500 dollars; 2nd, 300 dollars; 3rd, 200 dollars. Write to Director-General of the International Federation, 17, Avenue Carnot, Paris	Oct. 30. . . J
Australian War Memorial, Canberra. Open to architects of Australian birth. Apply High Commissioner, Australia House, Strand, London	Aug. 14 . . . A
Plan for construction of Conference Hall, for League of Nations, Geneva. International Competition. Sir John Burnet being British representative on Jury of Assessors. 100,000 Swiss francs to be divided among architects submitting best plans. Programmes will be deposited in due course with R.I.B.A., 9, Conduit-street, where intending competitors should apply. Single copies from Secretary-General, League of Nations, Geneva, on payment of 20 Swiss francs.	Jan. 2 . . .
Art Gallery and Museum, Birkenhead. Limited to competitors practising within 20 miles of Birkenhead since January 1, 1923. Premiums: £250, £175, £100. Sir Robert Lorimer, A.R.A., assessor. £22s. deposit. Apply Curator, Central Public Library, Birkenhead	Oct. 16 . . .
*Guilborough Proposed New Hospital	— . . .
*Competitions when "warned" or vetoed by the are started.	

New Premises for Spillers' Industries, Ltd., St. Mary Axe, London, E.C.: Chimneypiece in Board Room.

SIR EDWIN COOPER, Architect.

THE PRESIDENTIAL ADDRESS.

On Monday evening last, at 9, Conduit-street, Mr. E. GUY DAWBER, P.R.I.B.A., delivered his Presidential Address to the Royal Institute of British Architects. Having paid a graceful tribute to his immediate predecessors in office, Mr. J. Alfred Gotch and the late Mr. Paul Waterhouse, the President referred to the recent amalgamation of the R.I.B.A. and the Society of Architects, which, he said, was a measure long wished for, but long delayed, and which had at last given to the architectural profession one single and undivided body, which, with its great Federation of Allied Societies in all parts of the United Kingdom and the Empire, was now in a position to speak with authority on behalf of a united profession. Everyone who had had anything to do with this work acknowledged the tact and good feeling shown on both sides, and the generous spirit in which the Society of Architects (whose members they gladly welcomed into their ranks) had met them. The majority of architects in this country looked to Registration as a necessary measure for giving to qualified architects the same professional status and protection that were afforded to the other registered professions, and the first use to which their new organisations would be put was the attainment of Statutory Registration.

A Committee was now completing the draft of a Registration Bill, and after the necessary negotiations with other interests concerned were concluded it was the intention of the Institute to promote this Bill in Parliament with the utmost energy until it became law. They felt they could rely upon the cordial support of their members and their Allied Societies to see this through. Now that their differences were settled and a future policy agreed upon, the Institute could devote its energies "to the advancement of Civic Architecture," to quote the words of their Charter—and to education—aims so interwoven that it was difficult to separate them.

One of their most important duties was to maintain a high standard of education in the profession. The Institute was not a teaching body, but through their examination system they were in touch with the teaching given in the recognised schools, not only in Great Britain, but throughout the Empire. The duties of their Board of Architectural Education became every year more onerous, and a vast amount of time was given by its members to work which was little known or appreciated. The Board controlled the examinations, its members visited and reported upon the work of all recognised schools, and they arranged the competitions for the valuable bursaries, prizes and scholarships under the authority of the Royal Institute. During the past few years great changes had been made owing to the increasing number of Universities and Technical Colleges which now included architecture as one of the subjects for degrees and diplomas. In the old days the Institute relied upon external examiners to see that the school standard was equal to that of the Institute examinations, but latterly it had been found impossible to compare by this means the standards reached in various schools working

under different conditions. The Institute had therefore set up a small board of architects, who visited all the schools to report upon the staff, curriculum and equipment, and this had been found most helpful to the schools as well as to the Board of Architectural Education.

It was not their aim to mould all the schools after one type, but to encourage and develop the best features in their various courses, and they proposed to invite the great Universities, the Board of Education, the London County Council and other bodies to appoint representatives to sit upon the Institute Board of Architectural Education—to assist them in the non-technical side of their work with their experience. The Institute was convinced this was the right method to adopt if architectural education was to keep fully abreast of modern requirements. That these requirements were great he could not too strongly urge upon the young men taking up the study of architecture to-day. Genius alone might enable a man, to some extent, to avoid the pitfalls of ignorance; but the immense development of new methods of construction, the keen competition and the improving standards of education demanded on the part of the ordinary man the best general technical and artistic training that he could acquire if he was to attain a reasonable amount of success in making a livelihood. He felt very strongly, however, that with all this more or less theoretical training they must not neglect the more practical side of their profession. One of the methods proposed was for students after their course of school training to go direct into an architect's office. If they were to go instead for six months into the workshops and to spend a further period as clerks of works upon some large or even medium-sized building, they would gain practical knowledge and, in his opinion, be better qualified to start practice than by coming straight from the schools or even from an architect's office.

A country's history was written in its architecture, and to us it was absorbingly interesting to note how architecture crystallised the tendencies of an age and to mark the extent to which it might, and, indeed, must, express the culture of an entire generation. Architecture was not made; it grew out of the necessities and requirements of a nation, and the attitude of the public towards it was to a great extent the social reflex of contemporary civilisation. Without a love and care for art, no nation had ever arrived at any point of eminence.

Turning to the question of art and the public, the President observed: Some said that everything popular must be bad; some urged that the claims of commerce led to the neglect of good architecture; others that the noble tradition of architecture was being debased by its surrender to purely utilitarian considerations; but few, he was sure, would dispute that one of the most helpful aids towards a better appreciation of architecture to-day was that the great pioneers in trade and commerce were erecting some of the finest modern buildings. Could they, for instance, contemplate the new Bank of England, the Britannic House in Finsbury-square, the new Midland Bank in Cheapside, Lloyd's Exchange, the new Holt building in Liverpool, and many others in London and the provinces, without acknowledging that commercial architecture was rapidly taking a high place in their civic life? If we thought of the buildings that would have been erected for such purposes half a century ago, we need not be despondent about the future or fail to recognise that amongst our business people, at any rate, an appreciation of architecture was growing.

Some of their critics considered much that was being done in towns and cities was "ugly, coarse and soulless"—to quote from a letter in the *Times*—and cited the buildings at Wembley and Adelaide House and Wellington-street in the Strand as examples; but might we not, on the other hand, regard these typical specimens of buildings as an endeavour on the part of the designers to get away from the banalities of so-called period architecture and

the too slavish imitation of the past? Was not the fact that the public for so long been used to this sort of thing that attempt at originality or a departure from conventional was bound at first to meet with disapproval?

When we thought of the heated discussion we had had this year over the Hume Memorial and Epstein's "Rima" in H Park, on the one hand, and over Gilly's fountain and "Eros" in Piccadilly-circus, on the other, did it not make one sceptical as to the value of current opinion regarding work of art that was new and strange? Three years ago the Shaftesbury Memorial "Eros" was the butt of criticism, vehement as that levelled at "Rima" to-day. It was a "hideous structure," a "big satyr" an "incoherent mass of metal with neither simplicity nor purity of design," and more the same effect, though some few ahead of the crowd considered the memorial "beyond question a noble work of art," an opinion which had been fully endorsed by time. To-day "Rima" had been as severely criticised, in this case, he thought, more justly. Did all this inconsistency of expressed opinion make us wonder whether public taste existed as if it did, whether it was of any value at all? One was reminded of the remark of Tacitus: "The public is no real judge of what is good or bad."

With regard to architecture they should welcome criticism of their work, even friendly abuse, because it was evidence that the public were beginning to take an interest in architecture and to notice what they thought of its merits or failings, and this was one great step towards their not only demanding, but obtaining architecture worth having. We were living in an age of advertisement; the victim of vulgarity over decent reticence, once the great boast of this country, had of late years seemed to overstep all bounds. There was a place for everything and a right way of doing things: the place for advertisements was not on buildings and in positions where they were an offence to the eye and an outrage upon public taste. The right way of drawing attention to a product was to entice the sympathetic consideration of the potential purchaser and not to set his nerves on edge and shock his feelings by forcing the advertisement on him at all times and seasons in the crudest possible manner. In many of our towns, London in particular—fine buildings were effaced and architectural features entirely obliterated by signs and letters many feet high, out of scale with their surroundings, spoiling and vulgarising the whole façade. Think what our streets would be if all the names of advertisements were confined to the fascia boards only—all, so to speak, hung on the line! What a comparatively agreeable picture gallery they would become!

If this was the case in our towns and cities, what of the country? How continually we see roadsides and villages marred by notice boards advertising some patent medicine, tea, whisky, with a repetition that actually defeats its own object. A few years ago nobody would have dreamt of advertising in this manner, but to-day everybody was allowed, apparently without any control, to display hideous advertisements, spoiling the rural character of the land. But, happily, there were indications that matters were changing for the better. As an instance of what could be done, take the beautiful road beside the River Wye between Chepstow and Tintern, which for some years past had been greatly marred by advertisements actually plastered on the rocks and running the length of the typical English scene. This was Crown property, and one of our most public-spirited members in that district wrote to the Office of Woods and Forests urging that this disfigurement should be discontinued, with the result that the Commissioners issued instructions to the lessee that it should be stopped at once.

The great oil firms, owing to public protest, had to a great extent withdrawn their

ly hoardings from the fields, and at th, after many years of Parliamentary ulties, the Advertisements Regulation Act 1907 had been amended and this session had ived Royal assent. The new Act was the me of conferences between the Scapa ty and the advertising section of the don Chamber of Commerce, who acted for great billposting organisations throughout country, and it had been helped forward by friendly sympathy of the Home Office, the istry of Health and the County Councils ociation. In order that the charm of try prospects might no longer be destroyed he callous advertiser, it now remained for local authorities to use their powers to full extent and for country residents and farers to urge action. The thanks of the e community were due to the Scapa ty for their unremitting efforts in this tion, efforts which had now been crowned success.

seemed a pity that steps had not been n by the Ministry of Transport to safed- from the display of advertisements the t new roads that are now being con-cted, for here there was an opportunity of ing these highways, if free from hoardings, with houses and buildings well designed r-anged on either side, unique in their ty and beauty. More consideration should e given to their junctions with existing s, where splendid opportunities were being ed for fine traffic centres, planned with ified buildings around them. A tax on r-ishments, as in France and other coun- , would not only serve as a source of me to the State, but as a deterrent to many advertised in a vulgar manner. The whole ude towards this question was becoming h more hopeful, and in years to come we nt expect to see advertisements treated in oughly artistic manner.

hen we turned to our old villages and try towns the position was not so hopeful. often we saw villages, whose rustic ater was their chief charm and attraction, g spoiled by new erections that aped the t features of our city buildings and were usically out of place. Yet all this was g done under the mistaken idea that pro- was being made. England possessed ex- te old villages and country towns, some e most beautiful in the world. They are ique and priceless heritage, the admiration envy of all who visited our shores, that d be preserved at all costs; but it was aggeration to say that in half a century's , at the rate so-called improvements were g made, the destruction of almost all the ty and distinction with which our stors enhanced these towns and villages d be complete.

ere were, it was true, the town-planning rs conferred on local authorities by Mr. Burns. They had, however, been adopted slowly, and as regards matters of amenity had been used and administered with far uch timidity. During the last session of ament the statutes were consolidated in a Act embodying the various amendments e since 1909. The general effect of these e been to simplify procedure and extend the e of the original Act, while increasing the r of the Minister of Health to enforce its . It was to be hoped that the measure d to extend town-planning powers to the -up areas of towns, which the Minister expressed his intention of introducing, d be passed into law at an early date, with amendment found necessary to make the ent Act effective as a means of preserving amenities of a district.

the carrying out of their duties under the ing Acts, the various municipalities had a t responsibility. In many cases we saw es and layouts which were to be com- ed in every way, suitable to the district, ood local materials, comfortable, well ned and designed, and adding to the ities of the countryside. Those which ed this standard were, unfortunately, the

exception. Local authorities, who since 1923 had been freed from much central guidance and control in such matters, were too often neglect- ing to maintain a decent standard of design in their housing work. Certain it was that, either for lack of proper control, or through want of care or designing ability, whole districts were being disfigured by small buildings placed promiscuously by the roadsides, built without the slightest regard to their position or the character of the site, of inharmonious materials and inappropriate design.

We built magnificent roads, we paved our streets and had the most efficient and up-to- date systems of drainage; we laid on water, gas and electricity and all that made for the material comfort of life, and yet with all this we neglected the æsthetic side, the cultivation of the beautiful and all that gave real and lasting pleasure to those who dwelt in the country. When we thought that day by day, all over England, old buildings were being pulled down without protest, to make way for new buildings, the majority without the least beauty or fitness, it made us marvel at our folly in allowing to be swept away the old work which told the history and tradition of our country in every town and village throughout the land.

He felt we owed a debt of gratitude to the Society for the Protection of Ancient Buildings for the energetic action and protests they so consistently made against such vandalism. To what a state of apathy had we fallen in England to-day when we could allow without protest the gradual demolition of an old his- torical building like Warwick Priory, with all its traditions and associations, and the shell only to be rescued by an enterprising American who was pulling it down stone by stone for re-erection in America, where it might stand

as a lasting reproach to our crass indifference in parting with one of these irreplaceable heritages of the past.

Our old villages to-day, in every part of the country, had a constant succession of motor cars streaming through as if on business of life and death, their occupants regardless of the comfort and quiet of those who lived in them and not even troubling to look at the buildings they passed by. Speed, and yet increasing speed, seemed to be the cry, and everything apparently had to give way to this. The policy of the new road makers apparently was to sweep away everything that stood in the way of speed, the old winding picturesque lanes were widened and straightened, miles of un- necessary concrete curbing were laid on either side of the old grass bordered highways—for paths that had never been needed in the past—magnificent trees were cut down, so that corners could be rounded and the entrance to every village was vulgarised by oil pumping stations and advertisements, so as to enable greater speed and haste to be obtained by the motorist. Could it be wondered at that all regard for old buildings or villages was in danger of becoming a thing of the past.

He would like to quote here some recent words of Professor Lethaby, who truly said: "The England that we love is the England of old towns, tilled fields, little rivers, farms, churches and cottages. If by violently marring the fair country and vulgarising the shy old buildings, we obtain so much less to love, what shall it profit? Without an England to love we cannot remain stout of heart and enduring. Civilisation cannot be had merely as a word—it rests on foundations." He (the speaker) was sure the majority of people de- plored the changes to which he had referred, changes taking place so rapidly throughout

From a Painting by Mr. T. C. Gotch.

the country, but a united and systematic effort on the part of architects and local authorities might do something to preserve the still remaining charm of the country.

In certain towns and districts there might be formed small civic committees, annually elected by the ratepayers, whose duty it would be to try and foster wider interests in their localities, their historical traditions, and their general amenities and architecture. They would enter on their task, not in any spirit of fussy interference, or the pushing of fads, but might help by suggestions and advice. The functions at first might be only advisory, but they would in time set up a sort of commission to which it would be a privilege and honour to belong. The annual elections would ensure that the work did not get into a groove, and the members would have no self-interested motives. On every committee there might be an architect, selected for his knowledge of the architecture and traditional buildings of the locality, and care should be taken to elect if possible only those who took an interest in their town or village, and were actuated by a sense of civic pride. In case of any matters of importance power should be given to call in the Commission of Fine Arts to give counsel. This might sound Utopian, but there were already many societies of this nature, acting without elected authority, who were doing admirable and most helpful work in Birmingham, Newcastle-on-Tyne, Norwich, Stratford-on-Avon, Coventry, and other places.

Many might say these things were too trivial to speak of—not worth the attention of a great Institute—but was it really so? Were they not, as architects, all keenly interested in the welfare of their country, in its beauty, its buildings and everything that tended to make it more attractive, more wholesome and and more joy giving?

DISCUSSION.

SIR FRANK DICKSEE, P.R.A., proposing a vote of thanks, said that the President's address had covered a wide field, and it was difficult to pick upon any one thing for comment. However, he would like to say a few words about education—not architectural education, but the education of the public. We were a democratic country, and it was desirable to educate our masters. Much was being done in this direction—by societies, magazines, newspapers, &c.—but much remained to be done. There was the evil of the outrageous and vulgar advertisement,

for instance. We suffered it—indeed, got hardened to it—in London, but it became very trying when, having got away from the town, we were assailed on every side by the evil we were trying to escape. Everything possible should be done to abate the nuisance. He remembered that some years ago Southampton Water was dominated by an enamelled-iron sign with lettering as long as the room they were in, advertising somebody's oats. When he returned home he gave strict orders that those oats were never to come into the house, and he hoped other people did the same. He could never understand why the taxation of advertisements was not adopted. Difficulties would no doubt be encountered, but if the tax were limited to posters it should be easy to impose. It was done in other countries by means, he believed, of a stamp.

SIR REGINALD BLOMFIELD, R.A., said it gave him great pleasure to second the vote of thanks and to congratulate his old friend on having attained to the highest rank that the Institute could offer. Mr. Dawber had given years of devoted service to the Institute as Hon. Secretary and in other capacities, and had fully earned the honour that had come to him. With regard to themselves, it was matter for congratulation that the hatchet had at last been buried and the controversies of two generations finally closed. Great credit was due to both bodies. He hoped that now they could go forward and devote themselves to the ideals expressed in their motto: *Usui Civium, Decor Urbium*. They must pull loyally together, not in the sense of a trade union, but as a team. He noticed that among their younger brethren there was a tendency to caustic criticism of the work of their colleagues. They could say what they liked among themselves, but articles were appearing in the Press addressed to the public, the justification of which was that they were intended to educate the public. He would like to say, first, that the public was not so ignorant as it was supposed to be, otherwise it would not employ the gentlemen in that room; in the second place, the writers of these articles were not always competent to criticise; and, in the third place, criticism of colleagues was unprofessional and unsportsmanlike, and that was what really mattered. That kind of thing could be done in the back office, but not in the market place. Continuing, Sir Reginald said that a tax on vulgar advertisements was extremely desirable. Those responsible for these things inflicted a great deal of annoyance on the community, and should be made to pay for it. He would like to see the tax extended to other forms of advertisement, but that, perhaps, was not within the range of practical politics. With regard to town interests, the Institute, the Society for the Preservation of Ancient Buildings, and other bodies had done much excellent work, but there was a great deal of leeway to be made up. It was not generally realised that architectural history did not end with the year 1700. Many buildings were put up in the eighteenth and nineteenth centuries which were as good as anything that had been done in the years before. Waterloo Bridge he held to be one of the noblest works of architecture in this country. He believed it to be the finest bridge ever built. The President of the American Institute of Architects had lately written to the Institute supporting the movement for the preservation of "a truly national monument." Waterloo Bridge was almost as essential a feature of London as St. Paul's itself. Would they, asked Sir Reginald, ever allow a sculptor to alter a great monument like Steven's Wellington Monument, or a painter to touch a great painting like Titian's "Bacchus and Ariadne"? They must not allow any alteration to Waterloo Bridge, for alteration would be tantamount to destruction. The Institute were making great efforts for its preservation, which he hoped would be successful. Turning to the question of the countryside, Sir Reginald said that they heard a lot about town planning, arterial roads, and so forth—all extremely important matters. The Ministry of Transport had a very difficult task, but he urged that the English countryside, unique in the world, should not be sacrificed

to the motor car. The whole countryside must not be Haussmannized.

The vote of thanks was then put to meeting and carried with acclamation.

The President briefly replied, and alluded to the services of the late President, Mr. J. Gotch, calling special attention to his work drawing London and non-London members into closer co-operation and comradeship through his position as the first—but not last—non-London President of the R.I.B.A. His term of office was marked by the successful completion of the amalgamation of the Society of Architects, whose President, Mr. A. J. Taylor, now F.R.I.B.A., had expressed his great regret at not being able to have the pleasure of being with them that night. The President unveiled the portrait of the late President, which has been so admirably painted by his brother Mr. T. C. Gotch. He moved a cordial vote of thanks to the painter.

Mr. J. A. Gotch seconded the vote of thanks to Mr. T. C. Gotch, the President put the vote to the meeting, and Mr. T. C. Gotch briefly replied.

The President then presented the R.I.B.A. Medal and Diploma for the Best London Street Frontage, 1924, to Messrs. Greenaway & Newberry, F.F.R.I.B.A., for their building—Auctioneers' and Estate Agents' Institute, Lincoln's Inn Fields. He congratulated the Council and members of the Auctioneers' and Estate Agents' Institute upon the acquisition of so beautiful and well-planned a building for their new home. It was based on eighteenth-century tradition, but was eminently suited for this purpose. They had with them that evening, he continued, Sir William Wells, President A.E.A.I., Mr. E. H. Blake, Secretary also Mr. F. H. May, a director of Messrs. Holla & Hannen and Cubitts, the builders of the new Institute.

Mr. F. H. Greenaway returned thanks on behalf of himself and his partner, Mr. J. Newberry.

The Hon. Secretary then announced that the next meeting will be held on Monday, November 16, at 8 p.m., when a paper will be read by Mr. Raymond Unwin, F.R.I.B.A., on "The Architect and His City."

Before the reading of the Presidential address the Hon. Secretary announced the decease of the following:—

Fellows.—William Morton Cowdell, elected Fellow 1906; Albert Howell, elected Fellow 1907; John Albert Gill-Knight, elected Associate 1891, Fellow 1913.

Retired Fellows.—James Jerman, elected Associate 1876, Fellow 1887, transferred Retired List 1923; Frederick William Tarr, elected Fellow 1890, transferred to Retired List 1923; Dr. Alexander Ross, elected Fellow 1893, transferred to Retired List 1923; Stephen Ernest Smith, elected Associate 1867, Fellow 1881, transferred to Retired List 1919.

Associate.—Ernest Thomas Jago, elected Associate 1906.

Licentiate.—Vere Calvert, elected Licentiate 1910; Alexander Caldwell Thomson, elected Licentiate 1912; Rowland Lloyd Jones, transferred to Licentiate Class, 1925; Miles Burt transferred to Licentiate Class 1925; Alfred Fitzherbert Haslewood, transferred Licentiate Class 1925.

Retired Member of the Society of Architects.—Charles Newson.

Honorary Corresponding Members.—Commendatore Giacomo Boni, Director of the Excavations of the Roman Forum, Rome, elected Hon. Corresponding Member 1886; Jean Théop. Homolle, of Paris, elected Hon. Corresponding Member 1897.

The Hon. Secretary moved that the regret of the Institute for their loss be entered on Minutes and that a message of sympathetic condolence be conveyed to their relatives.

The President, having admitted a number of new members,

The Secretary announced that the candidates nominated for election November 30, 1925, were as follows:—As Fellows, 97; as Associates, 62; as Hon. Associates, 3; as Hon. Corresponding Members, 5. The names, having been published, were taken as read.

Brick Chimney Stack at Adisham, Kent.

ARCHITECTURAL SOCIETIES

Berkshire Society of Architects.

READING a paper on Wednesday last before Berkshire Society of Architects at Reading, "The Works and Influence of Sir Christopher Wren," Professor A. E. Richardson said in view of all that had been said in written of the career of Sir Christopher Wren it would be superfluous to recapitulate which are common knowledge. We had gained some idea of Wren as a man and respect for his extraordinary career; and in spite of the comments of some foreign architects who failed to understand his merits, in spite of our knowledge it was not surprising to find that many sides of Wren's personality had yet to be discovered. Dates, and statistics were useful as markers, especially when the career of a personage outside the ordinary was entered upon; but helpful such facts were, they did little to explain dominant tendencies. The complete life of Wren had yet to be written. So far we had been collecting data. It was, however, encouraging to know that the Wren Society was working with an authentic collection of drawings, and that these might form the basis of a work of authoritative nature.

The English collectively named Inigo Jones Sir Christopher Wren, yet the bias was towards the popularity of the latter. In building circles Wren's name stood for modern England. That he was a scientist of no mean order was universally acknowledged, but it was wide of the truth to name him as a scientific architect. Inigo Jones was a restorer; Wren, on the other hand, was an innovator, to which position he was helped by education and opportunity. Had he not been a great architect he would have carried a marshal's baton with equal skill.

Wren did not originate a style; no man was good enough to do that. His earliest works followed the manner of Inigo Jones, which he changed after the famous visit to Paris. It is also to be remembered that the mediæval tradition of craftsmanship was still in being. There were master bricklayers, master masons, master carpenters who, thanks to their training and the system of apprenticeship, were capable of undertaking buildings of fair quality.

The influx of ideas from Holland, France, and the commercial rival, and from France, the spiritual home of the Royalists, in turn introduced ideas which filtered down through the various levels of society until they in turn reached the minor branches of art. As Wren had experience as a builder, so he was able to invent; and to aid in this achievement, he was helped by the conditions of his time, he drew freely from the line illustrations of books published in Italy, France, and Holland. All the available information of mediæval architecture was obtained at second-hand. The wonder was not so much on account of the imperfections of the detail as at the high standard of ordinary work. The mediæval impulse, however, was so strongly imbedded in the mind of the architect, as it was in the minds of those who worked for him, that the planning of buildings invariably received the first consideration. In France, on the other hand, the greatest study was given to composition on the most vast scale.

Wren's plans, by contrast, had all the force of direct statement, but in some cases lacked the subtle grace never absent from French works of similar character. There was a marked difference between contemporary French and English work. Wren realised the value of using brick as well as stone. The French showed a preference for stone. Wren was careful regarding questions of economy and did not embark on anything which could not be constructed. For this reason the period of Wren's activity could justly be called the period of compromise between the mediæval impulse for building which was instinctive and natural, and the imitation of detail of a quasi-classical

character from foreign sources. As this subject was pursued the inner action of the vernacular could also be discerned; especially was this the case with the smaller type of house. Wren must be considered the first of the modernists. He was not only responsible for the design of buildings, but, as in the case of Chelsea Hospital, Greenwich, and the Blue Coat School, he drew up rules for the running of the establishment. With such a man, cause always ruled ultimate effect. To Sir Christopher Wren could be traced the rules and regulations for making London fireproof, which had since been followed and formed the basis of the London Building Act. In the years succeeding the Fire, Londoners who had seen the gabled buildings of mediæval character in every street gradually became accustomed to the plain brickwork and sashed windows of flat-fronted houses in which the design of the roof was inconspicuous.

There had been tenement buildings in the days of Elizabeth, and it was interesting to note that under the regime of the later Stuarts this system of close building was continued. Such examples as the chambers in the Inns of Court and at the Universities of Oxford and Cambridge could be quoted as contributions to the new system. To the far-seeing wisdom of Wren could be assigned the grouping of houses into different categories such as first-, second-, third- and fourth-class houses. We must not forget the powerful influence in house design which came from the Netherlands.

A few years after the Fire the new character of London had its counterpart in the provincial towns, with the difference that the use of local material imparted an added freshness to the standard types. Thus it could be assumed that for a hundred and fifty years after Wren's death geographical considerations aided local expression in the sphere of building. Research had proved that no country had evidenced such regard for tradition.

BRISTOL SOCIETY OF ARCHITECTS

The Bristol Society of Architects opened their programme of meetings for the winter session with the President's conversazione, at the Royal West of England Academy, on October 29th. Mr. R. C. James, F.R.I.B.A. (the new President) referred with deep regret to the death of Colonel Fry (of Weston-super-Mare), after an operation. He then touched upon the history of the society, and gave figures illustrating the progress of the past ten years: 1915—Fellows, 32; associates, 22; students, 11. 1925—Fellows, 58; associates, 37; students, 33. That result had only been obtained through strenuous work and organisation. The latter started with the parent body, the R.I.B.A., and ran throughout the whole of the allied societies. The organisation of the R.I.B.A. was achieving results of incalculable benefit to the profession. Arising from this organisation was the Bristol Architectural School, which was now well established, thanks to the energy of several practising members of the society, among them the President of the Wessex Society of Architects (Mr. G. C. Lawrence). The school was progressing most favourably, under the headmaster (Mr. Gordon Hake) and his assistant (Mr. Button).

Mr. Gordon Hake, F.R.I.B.A., said the school did not aim primarily at the production of fine draughtsmen, but chiefly at giving the fundamental teaching and discipline of the art, science, theory and history of architecture, which, supplemented by work in an architect's office, would qualify the student for an independent practice of his profession.

The Council and Officers for the Session 1925-6 are as follows: President: R. C. James, F.R.I.B.A. Vice-President: W. S. Skinner, F.R.I.B.A. Fellow Members of Council: Mowbray A. Green, F.R.I.B.A., R.W.A.; G. C. Lawrence, F.R.I.B.A., R.W.A.; Sir George Oatley, LL.D., F.R.I.B.A., R.W.A.; W. J. Stenner, A.R.I.B.A.; and B. F. G. Wakefield, F.R.I.B.A.

Associate Members of Council: B. F. Brueton, A.R.I.B.A.; and C. H. White, A.R.I.B.A. Hon. Treasurer: T. A. Skinner, A.R.I.B.A. Hon. Secretary: G. D. Gordon Hake, F.R.I.B.A.

HISTORICAL TOWN PLANNING

THE third lecture on town planning, given by Mr. William Haywood, F.R.I.B.A. at Birmingham University, carried the record of historical town planning down to the beginning of the nineteenth century. In these lectures the gradual development of formal planning from 2500 B.C. onwards has been contrasted at each stage with modern practice, in order to emphasise the character of past performance.

Progress in the past, said Mr. Haywood, had been fitful. Highly important methods of planning, displayed where their influence might well be thought irresistible, had sometimes been strangely neglected by later designers—as when both the Greeks and Romans ignored the dramatic possibilities of the axial association of road and building which the Egyptians had so well demonstrated in the ceremonial approaches to their temples.

The Roman method of grouping temples with their fora was not to be regarded as equivalent to the practice of the Egyptians referred to above, nor to the association of buildings with public squares in later periods. The authority of Vitruvius—who classed the forum as a building—was so strongly supported by their known use for ceremonial, business and communal purposes, that the axially arranged temple might here be regarded as the inner sanctuary of a larger building; built, it was true, without a roof, but not differing greatly in that respect from the hypæthral treatment of the forensic basilicas of the period.

It was to Rome during the Renaissance that we must turn for the next appearance of a consistent effort to group roads and buildings together as one composition; and the gradual emergence of this dominant factor in town planning coincided with the slow development of the Piazza del Popolo from a mere junction of two ancient roads (the Via di Repetta and the Corso Umberto) to a symmetrical triple junction by the planning of the Via del Babuino in 1516, and later to a great traffic centre of multiple routes fully clothed with appropriate architectural character.

Before the Piazza del Popolo had assumed its final appearance, however, Sir Christopher Wren had carried the principles of town planning far beyond all contemporary design in his wonderful plan for the rebuilding of London after the Great Fire. Wren's plan was remarkable for the freedom with which he varied the alignment of his streets to suit practical needs and architectural effects: there was no greater lesson in town planning history than the loss suffered by London from the absence of legal powers at a time of great opportunity.

Paris at this time (1666) had taken no step forward in the new progress, and the present eminence of her town plan was by no means the outcome of a preconceived ideal. Paris was a brilliant example of sectional opportunities put to good use. The "Grande Boulevards" of the north bank of the Seine were a legacy from the conversion of the north line of fortifications in the third quarter of the seventeenth century; the "Boulevards Extérieurs" replaced the old customs wall removed by Hausermann; and the semi-military clearance scheme of the mid-nineteenth century gave excellent opportunities for re-planning the congested areas in the centre of the town.

Fortunately for Paris, the political significance of fine building had always been fully appreciated by her rulers; and the flair of the people themselves for an imaginative treatment of practical needs had given an extraordinary impetus to the finely adequate plan for which Paris was famous. The pride of citizens in their own city must always be a powerful influence for good in town development.

WILL IT COME TO THIS?

By A PROPHET.

MR. WHIP, of the well-known firm of architects, Messrs. Whip and Wrinkle, who had slumbered peacefully through a series of committee meetings extending over a period of ten short years, found himself on April 1st, 1936 (a day which most of us will remember as one of some importance), sitting on the same comfortable chair, at the same handsome table, in the same luxurious room, for the same somewhat hazy purpose for which he and other good men and true had first assembled somewhere in 1926.

It will be recalled that in that year, following a General Election, fought entirely upon the question of Waterloo Bridge, the King's Speech revealed the gratifying fact that His Majesty, upon the advice of his Labour Ministry, referred the whole matter to the Trade Union most concerned; and so prompted, the Royal Institute of British Architects, recently amalgamated with the Architecture Club and affiliated to the Plumbers' Union, had appointed a committee to deal with the whole question. Hence, one evening a week for the past ten years Mr. Whip, among others, had faithfully spent his after dinner nap at Conduit-street instead of by his own hearth. On the evening above referred to, this worthy gentleman, probably for some gastronomic reason, was suffering acutely from insomnia, and as a consequence the proceedings appealed to him as something quite fresh and interesting. Looking curiously around upon his fellows, he was impressed by the distinguished, learned and amiable tone of the assembly. It was perfectly evident that to take any individual member haphazard and dress him really well would never disguise an eminent architect from the simplest country cousin. Learned also were they all, some being far too clever to build; and amiable they must have been or how else was harmony maintained?

The opening formalities were much as usual, Mr. Whip himself fulfilling his usual duty in moving the first proposition down on the agenda, which read as follows:—

"That this Committee, being fully alive to the pressing nature of the need for a solution to the Waterloo Bridge problem, and realising that the time is ripe for such a solution to be found, is resolved to take immediate steps to find it."

When this motion had been seconded there was a scene of intense enthusiasm, such as one would expect from any meeting of men of action like these.

The first of a series of amendments was then moved by the most business-like of the members (not that he was not also thoroughly professional). The amendment was as follows:—

"That this committee, having doubts as to the pressing nature of the Waterloo Bridge problem, and realising that this is an age of progress, and that little more than a century can pass before all traffic is air-borne and will cease to burden our streets and bridges, deprecates any squandering of public funds, and is resolved to recommend that Waterloo Bridge be raked out and pointed in Portland cement and sand (1 to 3), and coated with a petrifying solution, and that sightseers be charged a small entrance fee, the proceeds from which shall be placed to credit of the Architects' Benevolent Society."

Another member, of probably wider experience, rose to support this amendment, but thought that it should be definitely stated that the Portland cement should be up to standard specification, and that the petrifying liquid should be specified. It can be imagined how impressed was Mr. Whip by this evidence of the technical detail into which the committee was prepared to enter, and though the amendment failed even in its revised form the moral effect was great.

Then followed possibly the least distin-

guished member of the committee, with yet another amendment in the following form:—

"That this committee, realising the pressing nature of the Waterloo Bridge problem, both upon the public conscience and upon the Thames mud, is resolved to co-opt the services of the L.C.C., that their experts may so strengthen the foundations of the bridge that the piers may settle a few feet to restore alignment with that so treated in 1925."

There is little doubt that this amendment would have received considerable support had it not been patent that the mover held strong "low-level" predilections, whereas the majority of the meeting held "high-level" views on this subject, and for that matter upon all others.

The next amendment was moved by the most learned member of the assembly, and possibly the most amiable, though he had quite a lot of friends. It was worded with ability, and though it was difficult to apply in any practical direction, its value to the proceedings can well be imagined. It read as follows:—

"That this committee, being fully alive to the impossible state of confusion of thought into which have sunk all modern ideas upon matters architectural, is resolved to recommend that Rennie's unfortunate essay in a dead style be entirely swept away, in order to open up a clear view of the so-called temporary bridge alongside, thus giving the public an opportunity of becoming educated up to a sense of appreciation of its clean, honest lines and of the delightful craft of the rivetters."

The meeting was obviously embarrassed, having nothing to say upon the matter, until the chairman came to the rescue by tactfully ruling the amendment out of order, pointing out that the temporary bridge was outside the scope of their deliberations.

The next member to rise to his feet was one of great distinction. One felt that it was really extremely good of him to be there at all, and the applause with which he was greeted was thoroughly respectful, though hearty. In sonorous tones he moved the following:—

"That this meeting, though fully alive to the pressing nature of the need for a solution to the Waterloo Bridge problem, and admitting that Rennie's design is not at all bad, is nevertheless convinced that A Man could be found, who, given the opportunity on a neighbouring site now encumbered with a monstrosity in the way of railway architecture, would give the community something worth having in bridge design; and it is, therefore, resolved to recommend that consideration of the Waterloo Bridge Problem be postponed *sine die*, or until such time as more important problems have been settled."

How this motion would have been received it is difficult to guess, for hardly had the distinguished voice ceased when there arose a great uproar in the streets outside. Enquiries elicited the startling news that Waterloo Bridge had collapsed and entirely disappeared.

The chairman then rose and addressed the meeting as follows:—

"Gentlemen,—After our many careful deliberations a final solution to the problem which we have been called upon to solve has at last been found. Without in any way boasting of our services, I ask you to put to yourselves one or two questions. Have we squandered any public funds in expensive works upon the bridge? Have we in any way mutilated Rennie's masterpiece? Have we done anything to make worse the traffic confusion which existed when we commenced session? Have we done anything to offend any single individual or section of the community? If you answer these questions as I expect you to, I am sure you will agree with me in feeling that we are much to be congratulated, and

that when we meet for the last time on day week to draft our report to the Council we can with justice claim that something tempted, nothing hastily done, has earned further repose. Gentlemen, good-night."

When I met our friend Mr. Whip on way home across Hungerford Bridge, after meeting, he was in a somewhat dazed state of mind, but he gave me an outline of the proceedings as I have set them down in pages, and they may therefore be taken as authentic and semi-official.

"My only fear, dear fellow," said he, as he said good-night, "is that some meddler suggest re-building the bridge, and then we are we?"

SINGAPORE REGISTRATION BILL FOR ARCHITECTS

WE have received the following statement from the Institution of Structural Engineers:

The Institution (which took up the matter as a protest against the proposed provisions of the Singapore Registration Bill for Architects) now received a further communication from the Colonial Office, offering a saving clause which is suggested may meet with the objection raised by the Institution and by a number of other powerful professional bodies who associated themselves with a similar protest.

This clause is to the effect that "Nothing in this Ordinance . . . shall be construed so as to prevent any civil, structural, . . . engineer, performing any function or exercising any power which he might lawfully have performed if he were an engineer as such engineer if this Ordinance not been passed."

The Institution of Structural Engineers does not accept this clause as it stands, but would be prepared to do so if the following words were added to the end of the clause:—"Notwithstanding that the performance of such function or the exercise of such powers may include the submission of plans, &c., under the Registration Act, 1925." The Institution of Structural Engineers points out that, failing this clause, in the event of a member of that Institution endeavouring to submit plans under the Registration Bill, there might, and probably would, be an endless legal argument as to whether or not he was a structural engineer, and what were not the proper functions of a structural engineer; and this might apply to the other professions named.

The main point which this Bill has served to bring into prominence is that present-day architects must cease to delude themselves or the public with the old-fashioned belief that an architect can do everything—design, plan, construct, specify, prepare plans for steelwork, and everything else. The architect is becoming more and more the master-designer, and he must invoke the assistance of the specialist on every important work. Any Registration of the future—and we believe that this has been endorsed by a politician of very high standing—is foredoomed to failure unless the professions of architecture, surveying and engineering are united as to their powers and visions. The case of the Singapore Bill provides one where the architects have endeavoured to act alone, and lengthy arguments—fortified by so far clear of recriminations—have so far produced the only result.

Roman Villa in Danger.

The Villa Atrium, one of the most important landmarks of Rome, has been threatened by a building society for demolition and reconstruction. In the course of the preliminary excavations, however, another wall of stones was discovered; this has been identified as a further stretch of the original wall of Rome, built by Servius Tullius round the Palatine Hills. Behind that again there has been discovered a network of architectural features marked with first-century characteristics.

New City Offices.

A new building for Messrs. Spillers' Milling and Associated Industries, Ltd., has lately been completed in St. Mary Axe from the designs of Sir John Cooper. It occupies one of those ward sites that are characteristic of the City—a corner site, with a frontage width of about 100 ft. and a depth of about 156 ft. Irregular in shape, it is reduced at the rear, for about half its length, to a width of just over 40 ft. Within this space Sir Edwin has planned a series of very convenient offices. The principal entrance, which is in the centre of the St. Mary Axe frontage, leads through a short length of corridor to the entrance hall, which gives access to the staircase and lifts. The corridor is continued on the further side of the entrance hall, where its left-hand wall abuts on to adjoining property, while opening off the right-hand side is a series of offices, lighted from the side street, which is called Bury-court. At the rear is a secondary staircase and lift. The accommodation generally provided is as follows:—Lower ground—heating chamber and strong-room; ground, and first floor—general offices; second floor—board room, committee room, and chairman's and directors' rooms; the third, fourth and fifth floors are all occupied by offices. The building is of steel-frame construction, faced with Portland stone, and the floors are of reinforced concrete. The general contractors for the work were Messrs. Higgs & Hill, while the sub-contractors were as follows:—Electric, J. Whitehead & Sons, Ltd.; electrical work, Higgins & Griffiths; heating and ventilation, Mumford, Bailey & Preston; steelwork, Mann, Long & Co., Ltd.; asphalt, J. A. Ford & Co.; locks and ironmongery, James Jones, Ltd.; sanitary fittings, A. Emanuel Jones, Ltd.; plumbing, Matthew Hall & Co.;

fibrous plaster, F. De Jong & Co., Ltd.; fireplaces, G. Matthews, Ltd.; lifts, Smith, Major & Stevens, Ltd.; wrought-ironwork and bronze work, Wm. Smith; carving, George Haughton (part); furniture, J. P. White & Son; parquet flooring, wood block, Hollis Bros. & Co., Ltd.; fire-resisting glazing, Luxfer Prism Syndicate, Ltd.; paint supplied by Sir W. A. Rose & Co., Ltd. The clerk of works was Mr. H. G. Rule.

Almshouses and Workmen's Club, Thorpe-ness.

The Margaret Ogilvie Almshouses and the Alexander Ogilvie Workmen's Club, Thorpe-ness, Suffolk, form part of the development which is taking place there. Old-world characteristics are being retained where these do not clash with modern requirements, and the County Sports Club, which contains bedrooms for 100 members, to which is being added a special wing containing large refectory, playroom and sleeping accommodation for members' children and their attendants, is being completed in the same style as the buildings here illustrated. Concrete is employed largely in the construction of these and other buildings now in course of erection. The half-timbering is of English oak, old hand-made Suffolk tiles being used on the roof of the Workmen's Club. The facing bricks, all carefully selected for colour and texture, and the cement rendering on the outer walls, are of the type common to much of the old Suffolk work. The architect is Mr. W. G. Wilson, F.R.I.B.A.

Design for a Main Road Inn.

This design is being exhibited at the Brewers' Exhibition at the Agricultural Hall. The building has been set back from the road so as to provide a forecourt for parking motor-cars; and it has been so designed that the saloon and public bars can be cut off from the rest of the inn during unlicensed hours. In addition to the accommodation shown on the ground plan, provision has been arranged on the upper floors for bedrooms for 12 guests and eight staff, with bathrooms, &c. The building is estimated to cost £10,000 and would be carried out in the simplest manner, with brick walls whitewashed on the exterior, the roof being covered with pantiles. The architects are Messrs. A. B. Hayward, L.R.I.B.A., P.A.S.I., D. C. Maynard, A.R.I.B.A. (Author of "Old Inns of Kent"), and C. A. Farey, A.R.I.B.A.

Liberal Jewish Synagogue.

We are asked to state with regard to this building, that the floors, galleries and staircases in reinforced concrete were the work of Messrs. Caxton Floors, Ltd., and the staircases were designed by their engineer, Mr. G. S. Marsh, A.M.Inst.C.E.

BOOK REVIEW

Scientific Paradoxes and Problems, and Their Solutions. By A. S. E. ACKERMANN, B.Sc. With an Introduction by PROF. C. V. BOYS, F.R.S. (London: The Old Westminster Press.) 1925. Price 5s. net.

There are many people possessing considerable mathematical ability who take a great interest in solving curious problems, and it is to those that this book is addressed. It contains a large number of questions, many of which are of great interest, followed by the author's solutions. There are many which may be easily solved by those possessing some knowledge of equations containing two or more unknowns; but there are other problems which need the exercise of considerable dexterity and reasoning power before they can be reduced to the equation form for solution. Whilst some of the problems are "old chestnuts," there are many more that have fresh interest for the reader, and the subject matter embraced by the questions is very wide. Some of the statements of the problems are long, and will tax the memory somewhat to hold and appreciate the plot and data so far as regards those of average mathematical ability; for example, 16 lines (half-page) of matter are required to state a problem concerning Arthur, Frederick and Herbert, who together with Gertrude, Margaret and Rosamund, had been investing their loose cash in botanical specimens, and the reader is then given some data concerning the number of specimens bought, and finally it is required to find the name of each man's wife! A solution is given, the credit for which is attributed to Prof. Hummel, of Queen's University, Belfast.

We cordially commend this little book to our readers, and anticipate that they will derive amusement combined with much valuable instruction in the use of their intuitive powers.

DIGSWELL ROAD BRIDGE, WELWYN GARDEN CITY

bridge, which was opened on Tuesday the new Digswell-road over the Luton of the London & North-Eastern Railway, about a quarter-of-a-mile from its with the main line at Welwyn Garden tion. It stands on the main axis of the and forms the connecting link between central shopping and business area and the stem of the new residential and park comprising the north-western quarter of n. It gives also important access to h Garden City from the north, replacing level crossings. The bridge is based dations of mass concrete, but the struc- self is designed in ferro-concrete on the l-Hennebique system. It is 132 ft. th and 56 ft. wide between parapets, constructed to carry with a large margin y the heaviest loads running on English The railway, at the point of crossing, ew to the centre line of the bridge in a utting on a heavy gradient and a sharp These conditions required special care gning to provide sufficient width and for the swing of the railway coaches and y for the future doubling of the railway. ew span of the arch is 29 ft. 4 in.

whole of the structural work was carried r the Garden City Company's Works ation (Messrs. Welwyn Builders, Ltd.). ay be congratulated on the successful tion of the bridge without accident and t the slightest interference with the rail- traffic, fifty-nine trains passing through ork daily during the whole period of uction. The general structural plans for dge were prepared by Capt. W. E. James, st.C.E., Engineer to the Garden City y; the details of parapets, terminal and lamp pylons being designed by their t Mr. Louis de Soissons, F.R.I.B.A.;

and the ferro-concrete details by Messrs. L. G. Mouchel & Partners, of Westminster. The whole of the ferro-concrete aggregate was quarried on the estate and prepared in the Garden City Company's washing and screening plant (Messrs. Herts Gravel & Brickworks, Ltd.). The attractive colouring of the parapets and terminal pillars was obtained by the use of white cement. The total cost of the bridge (not including the approach roads), was about £6,000, towards which contributions of £500 each will be made by the Ministry of Transport, the Hertfordshire County Council, the Welwyn Rural District Council, and the London & North-Eastern Railway Company, the remaining £4,000 being contributed by the Garden City Company.

The isometric diagram shows a portion cut from the middle of the bridge and is intended to make clear the method of construction. The curtain walls and foundation slabs of the abutments are seen in section, and two pairs of the abutment counterforts are included, there being seven pairs in all. Carried on the counterforts, the heavy abutment beams are shown, these being designed to distribute the thrust of the ribbed arch evenly over the counterforts, which are spaced at 10 ft. centres, the beam action being partly horizontal and partly vertical. It will be observed that the cellular design of the abutments makes use of the dead weight of the earth filling to give the stability which, in ordinary construction, is only obtained by building massive abutments of masonry and concrete at great cost. The same principle is employed in the design of the spandrils and the retaining walls which support the raised approaches to the bridge on either side. As no scaffolding or centering could be erected over the railway some other means of constructing the arch had to be devised, and it was ultimately decided to erect the centering on the level

ground near by and to cast the arch in the form of separate trough-shaped ribs of reinforced-concrete, lying side by side and each 2 ft. in width. Thus the arch was under construction during the period of building the abutments, a considerable saving of time being effected by this means.

When the abutments had been brought to springing level, the arch ribs, thirty-one in number and weighing nearly three tons each, were lifted by an electrically-operated crane with a 90 ft. jib and swung into position over the railway, this operation being carried through within nine hours on Sunday, March 8. The diagram shows ten ribs in position and another being lowered on to its seating. The arch having been thus rapidly completed, the abutment counterforts were continued to their full height and tie-beams were laid above the arch to link up each pair of counterforts, so as to take up the horizontal component of the thrust. A sectional view is given of one of these ties and the adjacent ribs, the crown of the arch being shown as cut away for the sake of clearness.

The reinforcement throughout is composed of round bars of mild steel conforming to the revised British Standard Specification, No. 15, the heaviest reinforcement occurring, as would be expected, in the abutment counterforts and in the tie-beams, the stress in the latter being wholly tensional. The bridge is calculated to sustain a live load of two 22-ton tractors, each hauling a loaded boiler wagon weighing 48 tons, moving in opposite directions and crossing on the bridge. This loading was adopted, though considerably in excess of normal requirements, to provide for the possibility of heavy plant and machinery being brought into Welwyn Garden City by road from the north.

Funchal's Proposed Port.

A contract has been signed by the Portuguese Government and Messrs. W. Muirhead, Macdonald, Wilson & Co., Ltd., of Parliament-street, W., for the construction of a new port at Funchal, involving £1,500,000 of British capital and the employment of British engineers.

Bequest to Victoria and Albert Museum.

The Victoria and Albert Museum has received an important accession to its collections of mediæval and renaissance art by the bequest of the late Mrs. George Cowell. Her son, Mr. Athelstan Riley, has generously renounced a life interest in the bequest, and the objects are now on exhibition in the Central Court of the Museum. Among the mediæval objects are several ivory carvings—a Byzantine relief of the Raising of Lazarus, dating from the eleventh or twelfth century; a leaf of a diptych (the other leaf of which is already in the Museum), with the Death of the Virgin and the Adoration of the Magi, and a relief of the Martyrdom of St. Thomas of Canterbury, both French work of the fourteenth century; and a series of fifteenth-century panels mounted as a cabinet, German or Flemish, with scenes from the life of Christ. The centrepiece of an altar cross and a pyx are characteristic examples of Limoges champlevé enamel of the thirteenth century. The sixteenth-century painted enamels of Limoges include a fine Virgin and Child by the painter, now known as the "Master of the Orleans Triptych," and a plaque of Herod receiving the Head of St. John the Baptist, from the atelier of Nardon Pénicaud, both showing the strong but harmonious colouring which gives their distinctive beauty to the enamel paintings of this early period. A polychrome Crucifixion of the school of Pierre Reymond is also worthy of mention. Several pieces of majolica of first-rate importance are also included. Among these is an Urbino dish with the subject of the Devotion of Mucius Scaevola, exemplifying the work of Nicola Pellipario in his middle period; and another painted by Francesco Zanto with lustre enrichments added at Gubbio.

PHILIP WEBB AND HIS WORK.—X.

By W. R. LETHABY.

THE OFFICE AND MINOR WORKS.

THE chambers in Gray's Inn which Webb occupied for nearly forty years were on the second floor of No. 1, Raymond Buildings (south side of stair). His office and "keeping-room," as he would have named it, overlooked the gardens which he called "my seven acres of city paradise." The trees rose before the windows like a tapestry, and on spring mornings they seemed to boil with busy little birds, while the rooks and the woodpigeons were constant delight. The chief things in the living-room office were a solid oak table with scrubbed top, a big book-case in which seemed to be ranged the picked literature of the world, and before the window his long drawing table. There were few things on the walls; a small copy by Fairfax Murray of Caraccio's St. George, photographs of the painted vaults of the Sistine Chapel, small casts of the Night and Morning figures, and a little portrait print of Michael Angelo are all I can remember. No "architectural drawings" appeared here or elsewhere, none of a show nature had ever been made. Two small Burne-Jones landscapes—studies for the background of "The Merciful Knight" in water-colour—"too solidly and beautifully handled to be looked on as sketches," were in the little entrance hall; Rossetti's water-colour of the meeting of Dante and Beatrice in Paradise, a lovely Boyce water-colour of a Border Castle, and Madox Brown's small cartoon of Christ stilling the storm were in the bedroom.

In 1889 Webb had a severe attack of rheumatic fever. "The nurse" (Mr. Jack says), "was a woman of strong sense and purpose; she could talk, and asked about the portraits—

Michael Angelo and Melancthon—and books. She went and fetched books from the shelves on minute instructions as to their exact places. When Webb was convalescent Morris used to come frequently, usually about lunch time;

head of Michael Angelo at Oxford, save for a battered nose, reminds me of Webb. In days he dressed well and "correctly"; later wore almost a uniform of brown tweed, but few things were still of the very best. "I would always have the best of everything, although his needs were carefully restricted. In all things he was "very particular." His walking-stick was an ordinary stout stick, but its head had to be well curved when he had to get a new one he had it hollow so that it should have a slightly

FIG. 2.—PIANO, DETAIL.

Webb, Morris and Nurse sat down to the meal and it was pleasant to hear the laughter."

Philip Webb was rather tall and had a stern face, kindly, but certainly stern. The bronze

section against his hand. His manners, as I might judge, were really fine and he was one time quite a diner out. He had the correctness of the Early Victorians with obvious sincerity. As Miss Morris says, "A certain dryness of manner in ordinary intercourse veiled a kindness easily divined by those who knew him."

The later works of Webb for the craft have been mentioned now. His "inventions" for more ornamental arts would, I believe, be more remarkable to most people than his architectural designs. If I threw over this general account of his work concentrated on his "decorations" and his drawings a greater impression of his work would probably be made. Such work has come from book-plates to important monuments. A great number must be quite unrecorded. A note shows that he designed the cloth cover for Morris's *Story of the Volsungs*. In the years of the "Firm" he designed an altar for Llandaff Cathedral, to go, I believe, with the reredos painted by Rossetti. Of things of this sort, I saw in progress a beautiful altar for the Deaconesses Institution, Clapham Common, designed by Miss May Morris in 1897, and I remember the bright delicacy of the vine pattern, with leaves and small round grapes; also the gold thread in different directions. A cover was made for the same altar from his design by Mr. Catterson Smith; it was of thin metal patterned in repoussé and laid down on a wooden core. The Chapel itself as well as its furniture was Webb's work, and one of the latest.

A piano decorated by Miss Faulkner in 1895 has been mentioned. I have little doubt that Webb designed it, as he certainly did all the piano undertaken some ten years later. Jack tells me that he believes this one was designed for Mr. A. Ionides. "It was I think, all Webb's design. I know he drew the bird at the Natural History Museum, and Miss Faulkner transferred it to the piano and did the gesso work and painting." I saw parts of it when in progress about 1895; the whole surface was covered with the most delicate fretted patterns. I can remember, and as the photographs reproduce here recall, it is simply the most beautiful of modern ornamental work known to me. I doubt if a better trellis of vine than that which covers the top (Fig. 1) has ever been seen. Notice here again the little wild bird

FIG. 1.—PIANO, PART OF TOP.

FIG. 3.—PIANO, DETAIL.

which arouse no question as to how pound they would cost, and the perfect which the stems wander over the surface ; too, as a modern piano has a dumpy that by means of a wide border on three only a more slender central space is which does much to carry on the face of form ; notice further the painted background of the lovely leaf scroll and the sharp contrasting change of metrical framework of Fig. 3.

dos at Whitelands College, King's-road, was made in 1886. This is the school

Ruskin was interested and where he ed the May Queen festivals. The east he chapel including the glass of three indows, was decorated by Morris & Co., ornamental work of the reredos was Miss Faulkner from Webb's drawings. plain square panelling, filling the whole low the windows, covered with gesso-work, silvered and lacquered. Each ntains a circular scroll of foliage except the centre on which is a vertical stem hich the scrolls on either side spread out, e forming a sort of tree. In four of the re symbols of the Evangelists. The well as the panels have pattern work, he cornice band is a big inscription in ven or eight inches high. A very hand- ce of work it is, interesting and some- look at, yet quiet. "It was a joint fr. Jack tells me ; "a world of helpfu- is part and no pay. I believe he drew ected the execution of the symbols as e ornament, but I think Morris did the option—at least, designed it. It is a thing and should be better known."

the original drawings for it are pre- the collection of Webb's designs in the m at the Victoria and Albert Museum. minor works, objects in cast-iron must eal mention. His cast-iron grates ack dignity and delicacy to a material een so vulgarised that redemption opeless. One little, quite cheap and grate that was sold for a great number y Longden & Co. in Oxford-street was d quite perfect. I wonder what has

become of the patterns ? Mr. Jack suggests that the Carron Iron Co. may have it. Among the drawings now at the Victoria and Albert Museum is a design made in 1865 for a "Conduit," or fountain, in this material for Battersea Park. In these things in cast-iron, as in all that he did, he seized on the essential character of material and craftsmanship ; refinements, adjustments, meaning, plays, "symbolisms" followed, but the main principle was *construction and craft character*. The table glass made for him about 1858 has the perfection of bubbles

FIG. 4.—PIANO, DETAIL.

blown in glass. In saying "symbolism" I am reminded that when a friend asked him to draw a book-plate Webb enquired whether he could think what was his special aptitude—"Procrastination."

In the new method of electric lighting he saw at once that instead of the rigidity of gas something fragile and swaying might be obtained, and he designed several delightful fittings ; one of these was put into the Webb Room at Wembley last year. In a letter about some

thing else Mr. Jack happens to add : "Webb took a great interest in this the then new way of lighting and devised several fittings which were, I think, on right lines, for such things—that is in regard to the appearance and a kind of poetic aspect of the lights. He insisted on slightness—fairy-like treatment—using silken cords with amber and other large beads for decoration ; never a large cluster of lights in one fitting, nor a powerful light in one bulb."

At South Kensington are designs for a set of fire-irons, for a mosaic pavement at No. 1, Holland Park (1879), and for many tombs and memorials. Iron beds, fenders, candlesticks, and other things have been mentioned before.

Of the animal drawings of later days five large, carefully-wrought studies of beasts and birds which were prepared for Morris' tapestry must be spoken of. These cartoons, made about 1886, were "finished water-colour drawings worked into with oil colour brushes, the Hare, Fox, Lion and Raven done in large, the Peacock smaller, done with attention to their purpose without shadow, but as living things ; the wools hold the light so that sober tones look quite bright." The living creatures were set among Morris's "splendid scrolled leafage" in grey-green. Above on two labels are the lines, "The beasts that be in woodland waste, now

sit and see, nor ride nor haste." "It's handy" (Webb said), "to keep a poet on the premises." The lion is in the middle. Of drawing lions I remember he remarked, "Either you make them look like yourself or Mr. Gladstone." The hare has lifted ears sharp as sabres—it is the embodiment of listening—the raven is what the illustration shows. The drawings were finished with the stiff brushes "to keep the lights" in the colouring, a point which he thought necessary in water-colour practice.

The pen drawing of an earlier time of a Lion sniffing the air at Dawn, now in the keeping of Mr. Cockerell, is in tone rather than line—"painting with a pen," as he called it—and of amazing force and delicacy. The method was doubtless founded on Ruskin's exposition in *Elements of Drawing*.

Modelled hares and dogs at South Kensington and the carved bird returning to her nest on the fireplace breast at Clouds have been mentioned. The latter was suggested by a carved moulding in Bologna. At Rounton, by the porch, is sculptured a hawk ; and I remember a drawing for a memorial to a little girl with an exquisitely tender lamb in a panel.

In his sketch books are many delightful drawings of animals and birds, "Actions of Clyde Gulls," "A Partridge Getting Away," "Recollections of Flight of a Kingfisher," "Flight of June Martins," "Head of Rook in Gray's Inn Gardens," "Swan, Cambridge Backs," and many creatures from the Zoological Gardens. In one little note book are two portrait heads drawn while listening to a lecture, small, but remarkably true and penetrating. Until quite a late time he continued to draw flowers. Several architects of Webb's genera-

FIG. 5.—PIANO, THE BACK AND A DETAIL.

tion had a reputation as "brilliant architectural draughtsmen," but all that is mostly a matter of office tricks—real drawing is different. Webb could draw truly and tenderly. He had a special interest in recording moving things—fire flames in his grate, the wind-blown flag of Holborn Town Hall as seen from his office window.

He was an early member of the Hogarth Club. In later years, he would not belong to any art or professional association whatever, seeming to look on them all as formed for the advantage of the group and the individual against Society. I found out once that Street had in earlier days offered to put him down for the R.A. He joined the Sanitary Institute, as that was for scientific research; and he helped to found the Society for the Protection of Ancient Buildings. All specialised professionals—"bottle-heads"—were disliked. Greed, he thought, was the chief root of our ills. When he was called on the jury to investigate the Jameson raid, Burne-Jones remarked, "He'll do his duty."

He found in himself a person he could experiment with. Wine was delightful and he was a good judge of quality, but he was better with little or none. Snuff he took, because he was of an igniting temperament, and taking it, he said, had often given him the moment for reflection. He required regular walking, and made it a habit. Mr. Jack sends me this note: "When he went to visit one of his 'jobs,' and had to stay in a big house, he took his dress suit in a carpet bag. He would say, 'This bag I charge down as £15.' He would allow no one to carry it downstairs for him. He appeared to have an inexhaustible supply of cigars; every time Weir or I had to make a journey, he produced a handful, although he himself did not smoke. Also, he had laid down a stock of wine in his early days—no doubt, very modest, but characteristic of his old-fashioned hospitality. On a very hot day—that of the Duke of York's wedding—Webb produced a bottle of his precious claret and glasses. . . . His Socialist leanings used to

FIG. 6.—TAPESTRY CARTOON.

tickle Sir Lowthian Bell and Mr. Percy Wyndham. They never lost a chance of goading him into an argument on the subject. . . . He was the best Socialist in the real sense I ever knew. It is strange how little I can recall about the old

life. It is like trying to remember past—it pleases and passes, but it also makes to grow, and herein Webb was like shine, and as little recognised and than Of all things, taking pains, with h with himself, with his reading, with o was his chief characteristic—his secret. one might take pains." A visitor to the Gallery saw him in front of Michael "Entombment"—a much-loved p "smelling it all over."

"The only time Morris ever lied to when he said I didn't pay attention thing he told me, and I did!"

MEETINGS

FRIDAY, November 6.

Institution of Structural Engineers (Branch).—Mr. H. B. Cronshaw on "Drying Machinery and Practice in the Making Industry." At Birmingham.

SATURDAY, November 7.

Institution of Structural Engineers (Branch).—Visit to brickworks in Stoke At 3 p.m.

MONDAY, November 9.

Surveyors' Institution.—President's At 12, Great George-street, S.W.1.

TUESDAY, November 10.

Westminster Technical Institute.—Capt Creswell on "Building and Engineering tracts." At 7 p.m.

WEDNESDAY, November 11.

Edinburgh Architectural Association. Swarbrick on "Work of Robert Adam 15, Rutland-square. 8 p.m.

Institution of Structural Engineers (Lancashire and Cheshire Branch).—Mr. Ewart S. on "A Critical Study of Regulations Governing the Design of Steel Framed Buildings in Manchester.

Royal Academy of Arts.—Professor Laurie on the "Theory of Colour and its Application to Painting." At Burlington House 4 p.m.

Liverpool Architectural Society.—Mr. Miller on "Modern Church Architecture." 13, Harrington-street.

THURSDAY, November 12.

Sheffield, South Yorkshire and District Association of Architects and Surveyors.—Captain Creswell on "Disputable Building Contracts." At Sheffield University.

CORRESPONDENCE

We are glad to publish letters on professional matters of interest to our readers, it must be that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express as briefly as possible.]

Leeds Parish Church.

This church was built according to plans under the supervision of Mr. Chantrell, architect, and was consecrated in 1841. The plan of the church is interesting, and the treatment of the interior is worth study. I have been entrusted with the duty of writing a short architectural history in order to put it in the hands of visitors, and cannot trace any drawings made by Mr. Chantrell. If any of your readers have information on the subject I should be glad if they could communicate with me direct.

E. KITSON CLARK.

Woodside, Leeds.

Registration of Architects.

The Builder has always proved itself impartial in topical discussions, and I am glad to submit my views on the matter of the newly incorporated Association of Architects. It is the rigid exclusiveness of the Association, and the air of mystery and secrecy which the provisions of the Registration Bill has resulted in the formation of the group.

Registration is absolutely essential, and the Association should have proved its desire for the public by throwing open the non-examination of Licentiatees to all architects and assistants, instead of limiting it to the old Licentiatees and the old Licentiatees, of whom are fellow assistants of equally uneducated but unattached men.

"UNATTACHED, BRIGHTON."

We are not aware of any "air" of mystery and secrecy pervading the provisions of the Registration Bill as alleged. Obviously it cannot be published till it is written, and it is not yet written. We have the opinion of the President that the moment the Bill is completed it will be published. The effect of the proposed Bill on the "unattached" has been clearly indicated in Major Barnes's letter of the 10th or two ago. The question of whether the R.I.B.A. ought to throw its doors open to all without examination is a large one and has been discussed *ad nauseam* for six years. The opinion of the great majority of the profession appears to be in favour of the R.I.B.A.'s policy.—Ed.]

"Non-Member" need be under no apprehension. Under the old Registration Bill of the Society of Architects, with the exception of which I had much to do nearly 20 years ago, and on which the new measure was founded, all reasonable vested interests were considered and safeguarded. I am confident that no Bill would have the least chance of passing into law which was not absolutely and even generous, in this regard. I am very confident that this is recognised by those now leading.

G. A. T. MIDDLETON.

Association of Architects and Surveyors.

My attention has been directed to a letter which appeared under the above title in the Builder of October 24.

I desire to point out that the Association of Architects, Surveyors and Technical Assistants in connection whatsoever with the organisation referred to by Major Harry Barnes. My attention is content with the steps it has taken to protect the interests of its members under the scheme of registration which may be adopted.

JOHN MITCHELL,

General Secretary.

Letters by "Zonam Perdidit" and "Unemployment Problem" is given on page 674.—Ed.]

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting!—Ed.

Internal Finish for Exposed Walls.

[REPLY TO "SUBSCRIBER," OCTOBER 30.]

SIR,—To make a thorough job of the internal walls, one must first treat the external walls to give the desired result. Treat concrete first with a stucco which contains a waterproofer, powder or liquid, or, if brickwork, build in a good red engineering brick, which should make an impervious wall. The internal walls can then be finished with Keene's on a Portland cement backing, and then treated with a matt finish paint.

G. W. H.

Crushed White Granite.

SIR,—If any reader could let me know the source of supply of crushed white granite I should be grateful. I am not looking for it as "waste," but in a form that will not require a great deal of washing and treatment before use.

"ANXIOUS."

Plans and Local Authority.

[REPLY TO "SURVEYOR," OCTOBER 30.]

SIR,—Section 158 of the Public Health Act, 1875, is in force in every urban district, but it is also in force in every rural district where the local authority has adopted Part III of the Public Health Act, 1890. Also in many rural districts or parts of districts in pursuance of orders made by the Local Government Board or Ministry of Health, in combination with Section 157 of the Act of 1875. In all these cases, the rural authority must likewise approve or disapprove plans within one calendar month, and there is no power under the by-laws to extend this period.

"LEGAL."

Size of Radiators.

SIR,—Can you inform me what is a sufficient size for an ideal classic radiator in a room 22 ft. 6 in. by 11 ft. 6 in. by 8 ft. high? The intention is not to heat the room entirely by this, but to be able to warm it sufficiently with the aid of a gas fire when necessary. I should also like to know what percentage of cubic area should be allowed.

"A COMFORT."

Corrosion of Roof Shed.

[REPLY TO "QUERIST," OCTOBER 23.]

SIR,—"Querist" would do well to concentrate entirely on reinforced concrete trusses, purlins and glazing bars, and to span the purlin with corrugated asbestos cement roofing in large sheets. The first cost will doubtless be heavy, but it will be permanent and will need no painting. Asbestos cement rainwater goods can also be obtained, and this material is most suitable for all work subject to attack by acid fumes.

"PERMANENT."

SIR,—The many high-class paint manufacturers that advertise in The Builder would suggest to "Querist" the right acid-resisting paint, but if the building is too far gone for the paint stage, I would suggest building in reinforced stanchions, concrete trusses, with reinforced concrete glazing bars. Heavy wood bars are recommended with asbestos cement corrugated sheets, with reinforced purlins for roofs and walls. Avoid all metal inside.

G. W. H.

SIR,—Form principals of pitch pine, with all ironwork, such as nails, straps, bolts, &c., exposed to fumes. Apply boiled linseed oil, then take out and let dry in the air. A good coating of oil will protect the ironwork. Ammonia will attack cement, such as sheeting, &c., but if these be tarred, this will prevent corrosion by ammonia.

A.

Cement Mortar.

[REPLY TO "BRICKLAYER," OCTOBER 23.]

SIR,—If the cement mortar be gauged with lime putty, say one of putty to six of mortar,

the effect is to give a much better spread to the mortar, while the strength of the latter is barely affected. In works where extreme soundness of construction is not required, a little gauge of clay in the mortar will do much to bring the same state of affairs about.

S.

Concrete Bricks.

SIR,—There is no reason why concrete bricks should not be produced to compare favourably in all respects, with the best claybricks. The proportion mentioned (6-1) is quite usual and satisfactory if the aggregate is of a suitable nature. If properly graded, mixed, and made, the resulting brick should absorb less than 10 per cent. of its own weight in water. As concrete is alternatively charged with (1) absorption, (2) condensation, it must be evident that the way in which the materials are handled is responsible for bringing about such widely differing results. Fifteen years' experience in the manufacture of concrete bricks and the study of concrete products generally, has convinced me that hand tamping is the most satisfactory method of consolidation for this type of product.

A. G. STEDMAN.

"Prong-lock Bar."

SIR,—I should be obliged if any of your readers could furnish me with the address of the makers of the "Prong-lock" bar for supporting metal lathing of plaster ceilings.

EXPORT.

By-law Questions.

SIR,—(1) Will Ruberoid, Vulcanite, corrugated iron, felt and asbestos slates fulfil the requirements as roofing materials for (a) a shop, (b) a dwelling house, (c) a store, (d) a factory, under the L.C.C. Building By-laws, &c.; also under the model by-laws?

(2) Will it be in order, under the model by-laws, to divide existing shops, dwelling houses, or combined shops and dwelling houses by means of timber partitions, so as to adapt them for separate occupation? Would not such partitions function as party walls except for weight carrying?

(3) What thickness of external wall would be required for a one-story building? Height of wall from floor level to upper surface of flat roof being 11 ft. 10 in., and depth of roof 8 in. model by-laws assumed?

(4) Into which class would you put a small garage for a motor car—"Domestic Building" or "Warehouse Building," assuming it has been built to let to anyone in the neighbourhood who may need it?

(5) Will it be in order to adapt the ground floor or part of the ground floor of a dwelling house at a garage for a motor car without fireproofing the floor over it; that is, the first floor? If, instead of a dwelling house, you assume the ground floor of a stores, will it alter the requirements under model by-laws, or Locomotives on Highways Act?

"DURBAN."

[Will "Durban" send his name and address, not for publication, but as a guarantee of good faith?—Ed.]

Subsidy Houses.

SIR,—I recently built and completed two bungalows. For roof covering I used Marseilles tiles, with chimneys roughcast, and cement skewing instead of lead flashing. I applied for subsidy in the usual way, and got a verbal sanction for occupation. One of the houses is sold, and both have been completed for over six months. I have now received notice from local surveyor that the building committee cannot recommend the payment of subsidy on houses which are not provided with suitable lead flashing to roofs. Has the committee the power to refuse subsidy after so long a period?

"J. L. I."

Water Heater; Waterproofing Material; Ventilator Light.

Inquiries on these subjects have been answered direct.

THE BUILDING TRADE.

THE NEW PUBLIC HEALTH ACT, 1925

THE Public Health Act, 1925, which came into force September 8 last, is a comprehensive measure touching upon a great variety of subjects, and thus may be described as an "omnibus" Act. A very useful Memorandum or summary of its provisions has been issued by the Ministry of Health, but a consideration of some of the most important sections may be of service to our readers.

Subject Matter of the Act.

The Act is divided into nine Parts. Part I, Preliminary; Part II, Streets and Buildings; Part III, Sanitary Provisions; Part IV, Verminous Premises; Part V, Watercourses, Streams, &c.; Part VI, Recreation Grounds; Part VII, Infectious Disease and Hospitals; Part VIII, Miscellaneous; Part IX, Baths and Washhouses. Section 1 subsection (2) enacts that Parts I to VIII and the Public Health Acts 1875 to 1907, may be cited together as the Public Health Acts, 1875 to 1925, and Part IX and the Baths and Washhouses Acts, 1846 to 1899, may be cited together as the Baths and Washhouses Acts, 1846 to 1925. Subsection (3) prescribes that the Acts thus grouped shall respectively be construed together.

The wording of subsection (2) is not quite clear, for when it speaks of "Parts II to VIII" this might mean Parts II to VII inclusive, but so far as we can see when both the Act and the memorandum thus name the Parts to be included the meaning is that the numbers mentioned are inclusive.

Application of the Act.

The Act applies only to England and Wales but not to the administrative county of London save as expressly provided (see Section 2 subsection (1)). The effect of this provision and subsection (4) is that only Part I and Part IX apply to London.

By section 2 subsection (2) "Parts II, III, IV and V are adoptive, and shall extend in so far as they may be adopted to any district for which they are adopted in accordance with the provisions of this Act."

But there is a proviso to this subsection: "Provided that where powers are conferred on a county council by any section in Part II of this Act those powers may be exercised by the council without an adoption by them of the provisions of that section."

By subsection (3) Part VI shall extend to any area in which Part VI of the Public Health Acts (Amendment) Act, 1907, is in force at the commencement of this Act and may be applied to any district by an order of the Minister of Health in the same manner as Part VI of the said Act of 1907 may be applied. This Part is not adoptive, and Part VII is also not adoptive and Part VIII operates without adoption.

In connection with the adoption of provisions of this Act, it is important to observe that by Section 1 subsection (4) it is provided: "The expression 'the commencement of this section' when used in any provision in Parts II to V of this Act means the date on which that section comes into operation within the district of the local authority by virtue of an adoption of that provision or of an order of the Minister of Health."

Adoption by Urban Authorities.

By section 3 it is provided that any urban authority may adopt all or any of the sections contained in Parts II, III, IV and V, with this proviso, that where the district contains a population of less than 20,000 according to the latest published census, the consent of the Minister is necessary for the adoption of the following provisions set out in the First Schedule: (a) section 21 (Water flowing on footpath), section 22 (Washing of soil into streets), section

44 (Offensive trades or businesses), or (b) any provision in Part V (Watercourses, streams, &c.).

Adoption in Rural Districts.

Section 4 provides that a rural district council may adopt all or any of the provisions of Parts II, III, and IV of the Act except the sections in Parts II and III, which relate to the following matters set out in the Second Schedule, viz., sections 17 to 19 (Naming of streets), section 21 (Prevention of water on footpaths), section 22 (Washing of soil into streets), section 24 (Projections in streets), section 35 (Power to vary width of carriageway and footway upon making up private street), section 39 (Notice of intention to re-construct or alter drains), section 44 (Offensive trades or businesses).

By subsection (2) the Minister may apply by order to any rural district or contributory place therein any provisions in Parts II to V or Part VIII in the same manner as provisions of the Public Health Act, 1875, which apply to urban districts may be applied to rural districts or contributory places therein, and section 276 of that Act is extended accordingly. But by subsection (3) an additional condition is imposed, for before an application is made to the Minister to exert this power notice of the application specifying the provisions of the Act in respect of which an order is desired shall be inserted by the applicants for the order once at least in one or more newspapers circulating in the area to which the application relates in each of two successive weeks.

The Ministry's Memorandum contains a valuable note on this section for it points out that a rural district council cannot adopt a provision of the Act for a portion only of the district, and therefore where the council desire that a provision should be applied to a contributory place or places only, within their district an application must be made to the Minister under subsection (2) of this section.

Method of Adoption.

The method of adoption where local authorities adopt any of the provisions of Parts II to V of the Act is prescribed by section 5. It is to be by resolution passed in accordance with the provisions contained in the Third Schedule. Section 6 enables the Minister on the application of a local authority by order to make such amendments or adaptations of any local Act as may appear to him necessary to bring the provisions of that Act into conformity with the provisions of this Act, and any order so made shall operate as if enacted in this Act. At first sight this would appear rather a startling power, but a note on page 7 of the Memorandum of the Ministry explains it thus:—Under section 11 of the Public Health Acts (Amendment) Act, 1907, as applied by section 7 of this Act, the powers given to a local authority are to be deemed to be in addition to, and not in derogation of, any other powers conferred upon the local authority by Act of Parliament, law or custom. Thus, if the local authority possesses powers directed to the same object as any provision of this Act, those powers are not affected by this Act, but if the authority desires to come under the general law this section enables the Minister to bring the local Act or provisional order into conformity with the provisions of this Act.

Section 7 applies certain provisions and definitions contained in the Public Health Acts (Amendment) Act, 1907, set out in the Fourth Schedule to this Act and in subsection (2) defines "local Act" as including Acts for confirmation of provisional orders and those orders as confirmed, and subsection (3) defines the expression "Statutory undertakers."

[The concluding Parts of the Act will be dealt with in succeeding issues.]

PREMIUMS UNDER THE RENT ACTS

FOR some time there has been an abundance of reported cases relating to the taking of premiums under the Rent Acts, a practice rather by sub-tenants than landlords in the past, but an interesting point was in the case *Rush v. Mathews* (The Times, October 24), which, so far as we are aware, has not come before the Courts hitherto.

The appellant in this case went to a room that had been advertised to apparently unfurnished, although the rent was not specific as to this, and he saw the tenant's daughter, who told him that the rent was 25s. a week, but as this rent could be charged under the Rent Acts a lease was granted for 14 years, under which the appellant would pay a weekly rent of 13s. 6d. and a premium of 11s. 6d., and there would be a premium of £10 down. It must be remembered that section 8 of the Rent Act, which prohibits premiums in sub-tenancies, enacts, "This section shall not apply to a grant of renewal or continuance for a term of years or upwards of any tenancy."

The appellant agreed to the terms of the lease, and on October 26, 1922, paid the £10, and two days later signed the lease and also the document, which related to the weekly rent. "In consideration of your having granted a lease for 14 years from October 30, 1922, of a top flat comprising four rooms at a weekly rent of 25s., the option to me to determine the same lease at any time by giving notice I hereby undertake to pay the sum of 11s. 6d. weekly by way of premium commencing on the thirtieth day of October 1922.—Signed, Walter A. Mathews." The option, it must be noticed, was that the tenant alone, the landlord having no right under the lease to determine the lease at any time.

The appellant paid the rent and premium for five or six weeks, but after that period, he was advised that he was only liable to pay the rent, tendered that sum, which was accepted. On October 9 the respondent in proceedings claimed possession of the premises, but the appellant claimed for the rent which had been tendered.

The subsequent proceedings, as reported, are a little difficult to follow. It appears that the County Court Judge in these first proceedings found that the standard rent was 10s., but he granted an order for possession, staying operation so long as the tenant paid 10s. and 5s. arrears of rent. The material point, however, is that in February, 1925, the respondent brought an action to recover one premium (11s. 6d.) due December 18, 1924, in these proceedings the County Court Judge had held that the amount could be recovered under the agreement and was not within the provisions in subsections (1) and (2) of section 8, but exempt from the prohibitions contained by virtue of subsection (3).

It appears that in the court below a good deal was made of the fact that the two documents—the lease and the agreement—gave different rights. The rent could be recovered by distraint, and non-payment would give a right of re-entry, whereas the agreement for payment of the premium conferred only a personal obligation enforceable neither by distraint nor by re-entry, and therefore, on appeal, the Divisional Court held that the two documents should be considered together to ascertain the whole of the transaction—that is, whether the sum was not in reality rent. The Court, reading these two contemporaneous documents together, came to the conclusion that the premium was the £10 paid at once and the whole sum mentioned in the two documents apart from this premium was but rent, and therefore, under the Rent Act, 1920, irrecoverable from the tenant.

It is to be noticed that the decision

to refer to the question whether the be paid were rent or premium, and to no reference as to the point as to this was an agreement for over 14 years subsection (3) of section 8, but we may t that any decision on this point was ary, for the provision contained in sub- (3) as to grants for 14 years or over only to premiums and not to rent; , directly it was found that the sums under the two documents were really not premium, that also concluded any under subsection (3).

HOUSING AND THE MUNICIPAL ELECTIONS

ceived too late for publication in our e a communication on this subject from F. Darbyshire, President of the National ion of House Builders. In view of the interest of the statement, we give a y of it below.

housing question naturally takes a pro- ple in the election addresses of the tes (says Mr. Darbyshire), for there are vards in some towns where the housing y is the most important question. ears strange that although the local ties have erected some 200,000 houses he war, the shortage is almost as acute ; but the fact is that they have spent all rgy and many millions of the taxpayers' in providing homes for a class of people e quite capable of providing themselves ouses with the assistance of the grant mer occupiers which is provided by the ng Acts.

re is a local authority which has 7,000 on its housing register—admittedly requiring the smaller houses. The council ling houses on eight estates, but on only the estates do the rents appear as low as l. On two other estates, the rents run 6s. 7d. per week; whilst on five, the rent is 18s. 7d. This authority has erected 4,800 houses, at rents up to . per week, and its Public Health Com- has actually passed a resolution that ould be set aside for the erection of ' motor houses. The hundreds of acres s and semi-slums are as densely packed

Federation, at the half-yearly meetings cently, passed the following resolutions ference to the future programme of the authorities:—

That all local authorities' housing s should be confined to the erection of to be let at economic rents, not exceeding 10 shillings per week, inclusive of rates, after ng the subsidy from the Government and al authority; and that the Government ested to refuse to sanction the erection local authorities of houses at higher r for sale, until the requirements of the paid working classes have been met."

That in the opinion of this meeting, e should be brought to bear by the ment on the local authorities to make and to advance capital on mortgage he provision of the Housing Acts to the per cent. permitted under those Acts, enabling a thrifty working man to se his house."

D LORD'S LIABILITIES

SE reported in the *Times*, October 17, v. Pillet, illustrates the serious liabilities s are under in respect of their premises, h very often they cannot obtain posses- them. The landlord, the defendant, was er of a house let on lease to the plaintiff, November 8, 1908, under which the d covenanted to keep the exterior of dding and the walls, &c., in good and tial repair. The length of the lease is ated. On April 2, 1924, the plaintiff ritten to the landlord as follows: "I his house wants painting and the steps front door want attention. These

matters can be attended to at or before the painting. It is useless, I take it, to think of them so long as everybody is employed at Wembley, or on strike there, which comes to much the same. July would suit me very well if that is a possible month, as I see no reason why it should not be. Perhaps you will let me hear from you in due course."

On April 5 the defendant communicated with a firm of builders saying that he understood the steps to the front door needed attention, and on April 8 they replied that the steps were in a dangerous condition, and they obtained an estimate from a mason of what was required to be done. The steps were repaired on April 16, but in the meantime, on April 14, when the plaintiff, an old man, was leaving the house by the front door, the top step and several others collapsed, and he fell into a cellar below, sustaining serious injuries for which he brought this action.

The case was tried without a jury, and the Judge awarded the plaintiff £1,200, of which sum £400 was special damages, with costs. The Court held that the letter of April 2 from the plaintiff was a notice sufficient to put on the landlord the responsibility of ascertaining the necessity of immediate repairs, and, in any event, on April 8 he knew from the letter from his builders that the steps were dangerous, and a reasonable time had elapsed to enable the landlord to do the repairs before the accident occurred. The learned judge intimated that if he were wrong in holding that a reasonable time had elapsed, then he held a duty was imposed upon the landlord to take temporary measures for protection, and if the letter of April 2 was not a notice of the dangerous condition of the steps, yet the defendant on the receipt thereof had a right of entry to enable him to inspect the condition of the premises, and this would prevent his relying on the allegation that

he had no actual knowledge of the condition of the steps. The report states that the Court referred to the authorities in support of this judgment, but at present they are not available as they are not given in this report. We gather from the judgment, as reported, that the Court intimated that there was no authority upon the point whether the letter of April 2 was sufficient to put the landlord on inquiry, but that it decided this point as a matter of principle apart from any decided case.

The case raises very interesting points, but we must defer detailed consideration of it until it is reported in full. That a landlord is not liable until he receives notice of want of repair was decided in *Torrens v. Walker* (1906, 2 Ch. 166), and if that notice called attention to a dangerous state of the premises, no doubt immediate action would be called for. The letter in this case did not suggest any immediate necessity for action, but, as the Court held, the communication from the builder did inform the landlord of the dangerous condition of the premises. This point was raised in *Cockburn v. Smith* (1924, 2 K.B. 119; *The Builder*, August 29, 1924) where communication to a builder was relied upon, but Lord Justice Bankes said: "Mere communication to a builder is not enough to exonerate the defendants. If the builder takes the work in hand the employer may be absolved on the principle of *Blake v. Woolf* (1898, 2 Q.B. 426), but that case has no application where the builder does nothing, and where the employers know that their communication is having no result I have no difficulty in finding they are negligent."

The Court found that the plaintiff had no knowledge of the dangerous condition of the steps when he wrote his letter, but that this letter put the defendant to the duty of making immediate inquiry and even of at once inspecting the premises.

NEW BUILDINGS IN LONDON.

Acton.—Work has started on the site of a new factory, four stories high, to be erected for Messrs. Landis & Gyr, Ltd., electric meter manufacturers, and designed by Mr. R. F. Bargman, A.R.I.B.A., 67, South-street, Dorking. Messrs. Edwards' Construction Co., Ltd., contractors, 86A, High-street, Eltham, S.E.9.

Barking.—A site at Creekmouth has been purchased by the Barking Town U.D.C. for the erection of an electricity sub-station. Mr. C. J. Dawson, Clock House Chambers, Barking, Council's architect.

Barnet.—New almshouses are to be erected in Wood-street by Messrs. J. Pearson & Son, 62, Stratford-road, Barnet. Messrs. Caroe & Passmore, 3, Great College-street, S.W.1, architects, acting for the Eleanor Palmer's Charity.

Battersea.—An elementary school is to be built in Meteor-street, S.W., by the L.C.C. to plans prepared by Mr. G. Topham Forrest, F.R.I.B.A., County Hall, S.E.1.

Becontree.—It is proposed to erect permanent buildings in Vallance-avenue in place of the temporary premises at the L.C.C. Housing Estate. Plans by H.M. Office of Works, Storey's-gate, S.W.1.

Billiter-street.—At Nos. 17-18, Billiter-street, E.C.3, a modern block of offices is to be built, designed by Messrs. Gunton & Gunton, Finsbury House, Blomfield-street, E.C.2. Messrs. F. G. Minter, Ltd., contractors, Ferry Works, Putney, S.W. Messrs. Archibald D. Dawnay & Son, Ltd., steelwork, Steelworks-road, Battersea, S.W.

Bishopsgate.—Messrs. Dorman, Long & Co., Ltd., Central Buildings, Westminster, S.W.1, are engaged upon the first sections of the steelwork for the new offices in St. Helen's-place, E.C., for Messrs. Hudson's Bay Co. Messrs. Dove Bros., Ltd., Clouesley-place, Islington, contractors. Messrs. Mewès & Davis, 22, Conduit-street, W.1, architects. Mr. F. Henneker, quantity surveyor. Dr. Oscar Faber, O.B.E., consulting engineer.

Brentford.—Plans are to be prepared by the engineering staff at Paddington, W.2, of the Great Western Railway, for a large goods warehouse, which will be equipped with electrical machinery.

Catford.—A new petrol service station, garage, &c., is to be erected in Bromley-road, S.E., for Messrs. F. Pilmore-Bedford & Co., 108, Bromley-road, S.E.6.

Croydon.—A proposal is being considered for the erection of a large dance hall in London-road, to the design of Messrs. Burdwood & Mitchell, 80, George-street, Portman-square, W.1.

Erith.—Messrs. Sidney Bacon Pictures Syndicate, Ltd., are to build a cinema theatre to accommodate about 1,200 persons. Messrs. G. H. Gunning & Son, Westminster Bank Chambers, High-street, Erith, contractors. Messrs. Lambhill Ironworks, Ltd., steelwork, Lambhill, Glasgow. Messrs. Hathern Station Brick & Terra Cotta Co., Ltd., glazed bricks, Loughborough. Messrs. Percy L. Browne & Son, Pearl Building, Newcastle-on-Tyne and London, architects.

Euston-square.—The Associated Hotels, Ltd., 57, Farringdon-road, E.C.1, propose to build a new wing at the Northway Hotel, 70, Euston-square, N.W.1, so doubling the accommodation. Messrs. Murrell & Piggott, architects, 44, Bedford-row, W.C.

Fleet-street.—Messrs. Wyman & Co., Ltd., printers, Fetter-lane, E.C.4, have purchased a site in New Street-square, E.C.4, where they propose to build a new warehouse.

Fulham.—A site in Britannia-road, S.W., has been purchased by the L.C.C. for a new elementary school. Mr. G. Topham Forrest, F.R.I.B.A., County Hall, S.E.1, architect.

Gray's Inn-road.—The second section of the large printing works and distribution warehouse for the *Daily Sketch* is being put in hand by the general contractors, Messrs. Holland & Hannen and Cubitts, Ltd., 258, Gray's Inn-road, W.C.

Mr. A. Rangeley, architect, 4, Cathedral Gate, Manchester.

Hackney.—New shop and showroom premises are to be erected at Nos. 372-374, Mare-street, E., for Messrs. Montague Burton, Ltd., wholesale clothiers, Leeds, to the design of Mr. Harry Wilson, 12, Victoria Park-road, Kirkstall, Leeds. Messrs. Lansdowne Building Co., builders, Lansdowne Works, Lambeth, S.W.8. Messrs. Archibald D. Dawnay & Sons, Ltd., steelwork, Steelworks-road, Battersea, S.W.11.

Kensington.—A number of Georgian houses, consisting of two and three reception rooms, lounge hall, eight bed and dressing rooms, maids' bedrooms, &c., are being built in Ilchester-place, W., by Messrs. The Mayfair Construction Co., Ltd., 296, High Holborn, W.C. Mr. Leonard Martin, F.R.I.B.A., architect, 17, Waterloo-place, S.W.1.

King William-street.—Messrs. Trollope & Colls, Ltd., 5, Coleman-street, E.C.2, are excavating for the new head offices in King William-street, Nicholas-passageway and Nicholas-lane, E.C.4, for the London Life and Clergy Mutual Assurance Co. Mr. W. Curtis Green, A.R.A., architect, 5, Pickering-place, S.W.1.

King William-street.—Steelwork is being erected for the extension of the premises of the Standard Bank of South Africa, Ltd., fronting on to Clement's-lane, E.C. Messrs. Lindsay's Paddington Ironworks, Ltd., steelwork, 15, North Wharf, W.2. Messrs. Walter Lawrence & Son, Ltd., contractors, Finsbury-square, E.C.2. Messrs. Meakin, Archer & Co., architects, 73, King William-street, E.C.

Lambeth.—Premises adjoining Guy's Hospital in St. Thomas's-street, S.E.1, are to be converted into an up-to-date school of dentistry, with an X-ray department, at a cost of £20,000. Adaptation planned by Messrs. Thompson & Walford, Leadenhall Buildings, Leadenhall-street, E.C.3. Messrs. James Carmichael (Contractors), Ltd., contractors, 331, Trinity-road, Wandsworth, S.W.

Lambeth.—The contract for the rebuilding of the first section of the Borough Polytechnic in Borough-road, S.E.1 (which is to be entirely reconstructed and enlarged at a cost of £80,000) has been awarded to Messrs. George Potton & Sons, Gainsford-street, S.E.1. Mr. W. Courtenay Le Maitre, F.R.I.B.A., architect, 133, Moorgate, E.C.2.

Lewisham.—At the L.C.C. Downham Housing Estate the contractors, Messrs. Holland & Hannen and Cubitts, Ltd., 258, Gray's Inn-road, W.C., are to build a new central school at a cost of £34,500. Mr. G. Topham Forrest, F.R.I.B.A., architect, County Hall, Westminster Bridge, S.E.1.

Leytonstone.—Alterations are to be carried out to the Central Receiving Home in Union-road, E.11, for the Board of Guardians, to the plans of Mr. S. M. Spoor, F.R.I.B.A., 1, Staple Inn, Holborn, W.C.1. Mr. John Upton, 105, Amity-road, E.15, contractor. Mr. A. R. Evans, 11, Gray's Inn-place, W.C., quantity surveyor.

Piccadilly.—In our last issue we stated that Messrs. Dorman, Long & Co., Ltd., were the contractors for the steelwork to the new building for Messrs. Swan & Edgar, Ltd., at the corner of Regent-street, W.1. This is incorrect. The contractors were Messrs. Moreland, Hayne & Co., Ltd., 80, Goswell-road, E.C.1.

Putney.—Messrs. Bower & Gibbs, 14, Riding House-street, W.1, have prepared plans for new branch premises in Putney High-street, S.W., for Messrs. Meakers, Ltd., outfitters.

Regent-street.—Demolition will shortly be put in hand on premises in Regent-street, W.1, which include the large Imperial Restaurant, owned by M. Oddenino. New premises of six stories have been designed by Mr. T. H. Smith, 17-18, Basinghall-street, E.C.2.

Richmond.—Messrs. Soole & Son, Ltd., Dunstable Works, Sheen-road, Richmond, are the contractors for alterations to premises in Hill

Rise for the National Provincial Bank. Mr. F. C. R. Palmer, F.R.I.B.A., 15, 1/2, gate, E.C.3.

St. Pancras.—It is hoped to start shortly upon the site of the proposed Western Polytechnic Institute, which mated to cost £112,000. Mr. W. E. F.R.I.B.A., M.Inst.C.E., architect (Messrs. & Glanfield), 6, Raymond Buildings, Inn, W.C.

St. Paul's.—Messrs. Searle & Searle, architects, Paternoster House, Paternoster-row, have designed a new block of shops and rooms for Messrs. Hitchcock, Williams & drapers.

Sanderstead.—A new church of St. Mary, to be erected, the first section to cost about Messrs. George Everitt & Son, Ltd., Syon-road, North Croydon, contractors. Greenaway & Newberry, F.F.R.I.B.A., and Parliament Mansions, Victoria-street, S.

Shoreditch.—Extensions, estimated at £10,000, are to be carried out to the Whiston generating station of the Shoreditch B.C. Newton Russell, M.Inst.C.E., Coroner, N.1, consulting engineer.

Snow-hill.—The Snow-hill Police Station is to be pulled down and reconstructed by City of London Constabulary, at a cost of £80,000. Messrs. John Mowlem & Co., Ebury Bridge-road, S.W.1, contractors. by City of London Corporation Surveyors.

Stamford-street.—Messrs. G. E. W. Sons, Ltd., Broadmead House, Pantiles, W.1, have started excavation for a new block of offices for Messrs. Cornwall Press, Ltd., at a cost of about £25,000. Mr. T. J. Fox, architect, 1, Museum-street, Bloomsbury, W.C.

Strand.—The Vaudeville Theatre repairs and extensions are to be carried out by Bovis, Ltd., 43, Upper Berkeley-street, by the direction of Mr. Robert Atkinson, F.R.I.B.A., 36, Bedford-square, W.C.1.

Tottenham.—Plans are being prepared for the development of the remaining portion of the Borough Council's housing estate, involving the building of about 300 houses. Mr. E. Monson, F.R.I.B.A., 120, Moorgate, architect.

Upper Brook-street.—Messrs. J. Ashtor & Son, 109, Stoke Newington-road, N., are pulling down the old buildings at the corner of Upper Brook-street and Carlos-place, S.W.1, where a block of residential flats is to be erected to the designs of Messrs. Edmund Wimperis, & Guthrie, 61, South Molton-street, W.1.

Walham-green.—Messrs. The Westminster Bank, Ltd., propose to build a new office at the Broadway, S.W. Mr. F. Dawber, 18, Maddox-street, W.1, Prestige & Co., Ltd., contractors, Cannon Wharf, Grosvenor-road, S.W.1.

Walworth.—Funds are being raised for improvements at St. Peter's Church, including a new organ, new bells, electricity, heating, repairs to roof and interior exterior redecoration. Mr. J. Rawlinson, architect, 11, Adam-street, Strand, W.C.2.

Wandsworth.—The Central Board of Education of the Church of England have bought a site of 12 acres at West-hill, S.W., where it is proposed to build a training college for clergy and laymen to accommodate for 220 students.

Wandsworth.—The St. Mary's Church at Summerstown, S.W., have decided to build a Sunday school, at an estimated cost of £10,000. Mr. Godfrey Pinkerton, F.R.I.B.A., 2, Inn-square, W.C.1, architect.

West Ham.—A secondary school is to be erected in Cumberland-road for the West Ham E.C. Mr. John H. Jacques, Lic.R.I.B.A., West Ham-lane, Stratford, E.15, architect.

Westminster.—New head offices for the Transport and General Workers' Union are to be erected in Smith-square, S.W.1, to the design of Messrs. Culpin & Bowers, 27A, lane, Cannon-street, E.C.4.

THE UNEMPLOYMENT PROBLEM

ONE WAY TO HELP.

R.—Some little time ago you were good enough to publish a letter which drew attention to the phase of the unemployment problem, the remedy for which lies entirely in the hands of the public. At this period of the year there is a considerable distress in the painting trade, and at the present time there are approximately ten thousand painters unemployed. This state of affairs arises solely from the habit which the public has acquired of putting in hand decorative work at one time of the year only. When the season arrives there will be acute competition for the services of painters who are now walking the streets solely because of a habit of mind on the part of the average housewife.

There is no sound reason why painting work should not be done in the winter months. We submit that there are many very good reasons why it should be, among them the following:—(a) The householder who puts work in hand in the slack season gets the best men, and hence the work is done better; (b) the master decorator has time to give individual attention and supervision, which is not possible during the "rush" season; (c) the state of business must inevitably have an effect upon estimates, to the advantage of the householder who places work in the winter; (d) it is bad business to pay (as we all must) to support men on the "dole" when there is work plenty for them to do and it is only a matter of a rearrangement of dates and a little forethought to keep them busy. This point should be dealt with especial force to public bodies.

It will be noted that we make no appeal on philanthropic grounds. Interior decorative work in winter is sound business, and our object is to get the public to see it. The fact that it relieves the distress of a body of citizens is incidental.

WILL MELLOR, Employers' Secretary.

J. A. GIBSON, Operatives' Secretary.

National Painters' and Decorators' Joint Council.

Failure of Steel Houses.

Birmingham Corporation, which built several steel houses as an experiment, has decided to build no more. The House Building Committee reported to the City Council recently that they had been found to be more costly than brick and concrete houses.

Influence of Aggregates on the Strength and Properties of Concrete.

On Monday, November 2, Mr. G. O. Case (President), A.M.E.I.C., read a paper on the subject to the Society of Engineers.

The paper began with a short account of the reasons which led its author to try to discover a form of concrete free from the disadvantages of ordinary concrete made with aggregates of sand and gravel. He said that in 1912 he read a paper before the Society of Engineers in which the results were given of the reinforcement of concrete with rods of wood and examples of the fact that wood embedded in cement or mortar was practically everlasting. Ordinary concrete and mortar possessed many disadvantages when used for the construction of sea defence works. The concrete was heavy and could not be easily nailed, or spiked. The timber decayed and was subject to the ravages of insects. The author had experienced these disadvantages and was thus led to make experiments in which sand and small wood chips were used as aggregates in the place of sand and gravel.

The chief difficulty to be overcome was the shrinkage in volume which took place in the wood when it had been embedded in the cement, a shrinkage resulting in the loss of adhesion, or, if the wood was sawdust, had been previously saturated, the breakage of the bond between the aggregate and the cement. If used dry, the set was retarded. The final result of these experiments was the patenting of the process known as the mineralisation of sawdust. This method prevented contraction on expansion of sawdust when mixed with cement and water, and at the same time rendered it fireproof.

RATES OF WAGES IN THE BUILDING TRADE

(For rates of wages in the Building Trade in Scotland, see page 686)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, etc.

NOVEMBER 9.—BASFORD.—CONVERSION.—Conversion of pail closets to water closets, in the parish of Colwick, for the R.D.C. S. Maylan, engineer and surveyor. Deposit £1 1s.

NOVEMBER 19.—**Maesglas.**—**SHED.**—Carriage shed and other works at Ebbs Junction, Maesglas, near Newport, Mon, for the G.W.R. Engineer, Paddington Station, London, W. 2. Deposit £2 2s.

NOVEMBER 19.—**Maesglas.**—**SHED.**—Carriage shed and other works at Ebbs Junction, Maesglas, near Newport, Mon, for the G.W.R. Engineer, Paddington Station, London, W. 2. Deposit £2 2s.

NOVEMBER 19.—**Maesglas.**—**SHED.**—Carriage shed and other works at Ebbs Junction, Maesglas, near Newport, Mon, for the G.W.R. Engineer, Paddington Station, London, W. 2. Deposit £2 2s.

NOVEMBER 19.—**Maesglas.**—**SHED.**—Carriage shed and other works at Ebbs Junction, Maesglas, near Newport, Mon, for the G.W.R. Engineer, Paddington Station, London, W. 2. Deposit £2 2s.

NOVEMBER 19.—**Maesglas.**—**SHED.**—Carriage shed and other works at Ebbs Junction, Maesglas, near Newport, Mon, for the G.W.R. Engineer, Paddington Station, London, W. 2. Deposit £2 2s.

NOVEMBER 19.—**Maesglas.**—**SHED.**—Carriage shed and other works at Ebbs Junction, Maesglas, near Newport, Mon, for the G.W.R. Engineer, Paddington Station, London, W. 2. Deposit £2 2s.

NOVEMBER 19.—**Maesglas.**—**SHED.**—Carriage shed and other works at Ebbs Junction, Maesglas, near Newport, Mon, for the G.W.R. Engineer, Paddington Station, London, W. 2. Deposit £2 2s.

NOVEMBER 19.—**Maesglas.**—**SHED.**—Carriage shed and other works at Ebbs Junction, Maesglas, near Newport, Mon, for the G.W.R. Engineer, Paddington Station, London, W. 2. Deposit £2 2s.

NOVEMBER 19.—**Maesglas.**—**SHED.**—Carriage shed and other works at Ebbs Junction, Maesglas, near Newport, Mon, for the G.W.R. Engineer, Paddington Station, London, W. 2. Deposit £2 2s.

NOVEMBER 19.—**Maesglas.**—**SHED.**—Carriage shed and other works at Ebbs Junction, Maesglas, near Newport, Mon, for the G.W.R. Engineer, Paddington Station, London, W. 2. Deposit £2 2s.

NOVEMBER 19.—**Maesglas.**—**SHED.**—Carriage shed and other works at Ebbs Junction, Maesglas, near Newport, Mon, for the G.W.R. Engineer, Paddington Station, London, W. 2. Deposit £2 2s.

NOVEMBER 19.—**Maesglas.**—**SHED.**—Carriage shed and other works at Ebbs Junction, Maesglas, near Newport, Mon, for the G.W.R. Engineer, Paddington Station, London, W. 2. Deposit £2 2s.

NOVEMBER 19.—**Maesglas.**—**SHED.**—Carriage shed and other works at Ebbs Junction, Maesglas, near Newport, Mon, for the G.W.R. Engineer, Paddington Station, London, W. 2. Deposit £2 2s.

NOVEMBER 19.—**Maesglas.**—**SHED.**—Carriage shed and other works at Ebbs Junction, Maesglas, near Newport, Mon, for the G.W.R. Engineer, Paddington Station, London, W. 2. Deposit £2 2s.

NOVEMBER 11.—**Erpingham.**—**EXTENSION.**—Of the sewerage system at Mundesley, for the R.D.C. A. H. Plowright, Engineer. Deposit £3 3s.

NOVEMBER 11.—**Plymouth.**—**SEWER.**—9 in. sewer on the North Houndscombe building estate. D. Ward & Son, 11, The Crescent.

NOVEMBER 11.—**Plymouth.**—**MAKING-UP.**—Of a new road, to be known as Hillcrest-avenue, situate on the North Houndscombe building estate. D. Ward & Son, 11, The Crescent.

NOVEMBER 12.—**Birkenhead.**—**ROAD.**—Making and completing of Highpark-road and a portion of Park Hill-road, for the C.B. C. Brownridge, Borough Engineer and Surveyor. Deposit 10s.

NOVEMBER 12.—**Carsethorn.**—**PIPES.**—Supplying and laying about 4 miles of iron water pipes from 4 in. diameter downward, and other relative work, for the special water supply district of Carsethorn, for the Stewartry of Kirkcudbright C.C. G. Thomson & Son, engineers, 164, Bath-street, Glasgow. Deposit £2 2s.

NOVEMBER 12.—**Hendon.**—**SEWERS.**—Widening and improvement of Hale-lane, Edgware, including the construction of 12 in. and 9 in. soil and surface-water sewers (approximately 400 yards of 12 in. and 170 yards of 9 in. soil sewer; 740 yards of 9 in. surface-water sewer); 1,500 yards of kerbing; 6,750 yards super. tarmacadam roadway; and 750 yards super. of tar-paved footways, for the R.D.C. H. W. Rackham, engineer and surveyor. Deposit £3 3s.

NOVEMBER 12.—**London.**—**FENCING.**—Supply and erection of wrought-iron fencing to enclose swings in gymnasias at certain parks and open spaces under its control, for the L.C.C. Chief Officer, Parks Department, County Hall, Westminster Bridge, S.E. 1.

NOVEMBER 12.—**Middlesbrough.**—**SUBWAYS.**—Construction of about 1,000 lin. yds. of subways and trenches in concrete and brickwork, for heating and hot-water mains at the Institution, for the Holgate Committee. D. Balfour & Son, civil engineers, 3, St. Nicholas Buildings, Newcastle-on-Tyne. Deposit £5.

NOVEMBER 13.—**Southampton.**—**PIPES.**—Laying and jointing about 36,800 yds. of 15 in. to 6 in. diameter C.I. spigot and socket pipes along various routes in the Corporation's area of supply, for the T.C. Waterworks Engineer, 21, Shirley-road. Deposit £3 3s.

NOVEMBER 14.—**Eccles.**—**RECONSTRUCTION.**—For (1) rock asphalt on concrete—Hampton-street, George-street, Henry-street, Leigh-street, Bright-road, Mather-road, Gorton-street, Boardman-street, Canal-side, Green-street; (2) tarred macadam—Andover-street, Franklin-street, South King-street, Bridgewater-street, Alexandra-road, Aldred-street, John William-street, Green-street; and (3) granite sets on concrete—Wellington-road, Cawdor-street, Trafford-road, Peel-street and Albert-street, for the T.C. Borough Surveyor. Deposit £2 2s. each.

NOVEMBER 14.—**Kingston-upon-Thames.**—**ROADS AND SEWERS.**—Construction of roads and sewers on housing estate, for the Corporation. Harold A. Winsor, Town Clerk, Municipal Offices, Kingston.

NOVEMBER 16.—**Haslemere.**—**SEWERS.**—For (1) 320 lineal yards of 6 in. diameter salt glazed stoneware pipe sewer, together with inspection chambers and manholes, on the Graywood-road, and from the rear of premises on the west side of Graywood-road; and (2) 423 lineal yards of 6 in. diameter salt glazed stoneware pipe sewer, and 335 yards lineal of 4 in. diameter salt glazed stoneware pipe drain, together with inspection chambers, manholes, &c., on Courts Hill-road, for the U.D.C. C. A. Best, Surveyor. Deposit £1 1s.

NOVEMBER 17.—**Lees.**—**MAKING-UP.**—Dixon-street, Smith-street, Back Dunham-street, between Smith-street and Dixon-street, Back Dunham-street behind Nos. 2-8, Dunham-street, Back Stamford-road behind Nos. 119-123, Stamford-road and Back Huddersfield-road behind Nos. 14-22, Huddersfield-road, all off Dunham-street, for the U.D.C. W. J. Lomax, engineer. 11, Fold-street, Bolton. Deposit £5.

NOVEMBER 17.—**London.**—**MAKING-UP.**—For (a) Hanbury-road, (b) Hollington-road, (c) Honeysett-road, (d) Rosebery-avenue, (e) Thackeray-avenue, for the Tottenham U.D.C. Engineer.

NOVEMBER 18.—**Rochdale.**—**SEWERS.**—Construction of roads and sewers on the Clarke's-lane estate, for the C.B. Borough Surveyor.

NOVEMBER 19.—**Carlisle.**—**PIPING.**—Low-pressure cast-iron piping for condensing water system, for the T.C. Chas. W. Salt, City Electrical Engineer. Deposit £1 1s.

NOVEMBER 20.—**Bognor.**—**ROAD.**—3,000 square yards of reinforced concrete carriageway, together with surface water sewer, gullies, &c., required in the reconstruction of Sudley-road, for the U.D.C. J. Draper, Surveyor. Deposit £1.

NOVEMBER 21.—**Scalby.**—**SEWERS.**—1,150 yards of 12 in. diameter and 1,900 yards of 9 in. diameter stonework pipe sewers, together with manholes, lampholes, and other incidental works, for the U.D.C. J. A. Iveson, engineer, 14, Dean-road, Scarborough.

Competitions.

(See Competition News, page 658.)

Auction Sales, Tenders, etc.

NOVEMBER 9.—**Evesham.**—E. G. Righton & Son will sell, at the King's Head Hotel, freehold property belonging to the late Mr. Harry Cooper. Auctioneers, Evesham, Alcester and Pershore.

NOVEMBER 10.—**Eltham.**—F. H. Clark will sell, at Timber Yard, Cider-path, Well Hall-road, huts, timber and building materials. Auctioneer as above.

NOVEMBER 10.—**Hackney.**—E. Joseph Hibbard & Sons will sell, without reserve, by order of Messrs. Haggis & Sons, preparatory to disposal of premises at Nos. 3 and 5, Pembury-place, Hackney Downs Station, E.5, stock of timber, piano parts, &c. Auctioneers, 15, Newington-green, Islington, N. 16.

NOVEMBER 10.—Kent.—Hampton & Sons will sell, with vacant possession, at the St. James' Estate Rooms, 20, St. James'-square, S.W.1, freehold residential property between Chislehurst and Bromley, 300 ft. up, on dry gravel soil, the property known as "Mavelstone," Bromley, Kent, consisting of about 3½ acres; also two sites of about 2 and 6½ acres, respectively. Auctioneers, 20, St. James'-square S.W.1.

NOVEMBER 10 AND 11.—Hammersmith, W.6.—Henry Butcher & Co. will sell without reserve, at 237, Hammersmith-road, Hammersmith, W.6, woodworking machinery, builder's plant and stock, &c. Auctioneers, 63 and 64, Chancery-lane, W.C.2.

NOVEMBER 11.—Hull.—Mr. W. H. Pickard, F.A.I., without reserve, timber (about 800 standards), in the City Hotel, Lowgate, at 11 a.m. precisely. Auctioneer, Hull.

NOVEMBER 11.—Merton.—Messrs. Vervard & Yates will sell, at High-street, useful building plant and materials, &c. Auctioneers, 365, Norwood-road, S.E. 27.

NOVEMBER 12.—Osterley.—Tyser, Greenwood & Co. will sell, by order of Executors, five plots of land on the south side of the Great West-road. Auctioneers, 386, High-road, Chiswick, W.4.

NOVEMBER 14.—Leiston.—Stanford, Broom & Stanford will sell, at the Brickworks, Leiston, Suffolk, brickmaking effects. Auctioneers, Halesworth, Suffolk.

NOVEMBER 16.—Swaffham.—W. S. Hall & Palmer will sell building materials dismantled from the Old Swaffham Workhouse. Auctioneers, Watton, Norfolk.

NOVEMBER 17.—London, S.W.—Messrs. Vervard & Yates will sell, at 255, Clapham-road, excellent timber and building materials, &c. Auctioneers, 365, Norwood-road, S.E. 27.

NOVEMBER 17.—Surrey.—Messrs. Charles R. Davis & Co. will sell, under a deed of arrangement, by order of the trustee, at Merstham, stock-in-trade, plant, machinery, and rolling stock, &c., of a builder and contractor. Auctioneers, 285, Borough High-street, S.E. 1.

NOVEMBER 17 AND 18.—London, S.W.—F. H. Clark will sell, without reserve, at the Tooting House, Church-lane, Tooting, seasoned timber and building materials. Auctioneers, Railway Wharf, York-road, Wandsworth, S.W., or on the site.

NOVEMBER 18.—Ramsgate.—Messrs. Vervard & Yates will sell, at 1, Chatham-street, excellent timber and building materials. Auctioneers, 365, Norwood-road, S.E. 27.

NOVEMBER 26 AND 27.—Sussex.—Perry & Phillips, in conjunction with Douglas Killick & Co., will sell, on the premises, Maresfield Park (unless previously disposed of), interior and exterior fixtures and fittings, the fabric of the mansion, lead, stonework, &c. Auctioneers, P. & P., High-street, Bridgnorth, D. K. & Co., High street, Uckfield.

Public Appointments.

NOVEMBER 9.—Bradford.—Resident Clerk of Works required from January 1, 1926, to supervise the erection of new Freemasons' Hall, Manningham-lane, Bradford. H. B. Bower, 9, St. Andrew's-place, Bradford.

NOVEMBER 9.—Leicester.—Two Assistants, also a Junior Architectural Assistant, required by the City Council in the Town-Planning Department. E. George Maybey, Surveyor, Town Hall.

NOVEMBER 9.—Watford.—Clerk of Works in connection with the erection of 96 houses required by the Corporation. W. W. Newman, Borough Engineer, Municipal Offices.

NOVEMBER 10.—Brighton.—Architectural Assistant, experienced in Housing and Estate Development required by the B.C. David Edwards, Borough Engineer, Brighton.

NOVEMBER 14.—London, S.W. 1.—ARCHITECTURAL DRAUGHTSMAN.—Required in the Mines Department. Under Secretary for Mines, Establishment Branch, Mines Department, Dean Stanley-street, London, S.W. 1.

NOVEMBER 14.—Oldham.—CLERK OF WORKS.—Required by the B.C. in connection with concrete foundations and piling for the new generating station. Borough Electrical Engineer, Greenhill Electricity Offices.

NOVEMBER 16.—Kingston-on-Thames.—Fully-qualified Quantity Surveyor required to prepare Bills of Quantities in connection with erection of a Nurses' Home and other buildings at the Hospital, Kingston Hill, for the Guardians. W. Taylor, Clerk, Union Offices.

NOVEMBER 17.—Enfield.—Clerk of Works in connection with about 150 cottages required by the U.D.C. H. R. Crabb, M.Inst.C.E., Engineer and Surveyor, Public Offices, Enfield.

NOVEMBER 17.—Glamorgan.—(1) Temporary Assistant Quantity Surveyor, (2) temporary junior Assistant Quantity Surveyor required by the Education Committee. W. James Nash, F.R.I.B.A., County Architect, Midland Bank Chambers, Neath.

NOVEMBER 17.—Notis.—GENERAL MANAGER.—Required by the Mansfield Woodhouse U.D.C. to supervise the erection of houses by direct labour. A. Mayhall, Clerk, Council Offices, Station-street, Mansfield Woodhouse.

NOVEMBER 19.—Clacton.—Temporary Architectural Assistant required by the U.D.C. Geo. T. Lewis, Clerk, Council Offices, Clacton-on-Sea.

NOVEMBER 21.—Kingston-on-Thames.—QUANTITY SURVEYORS.—Required by the Surrey Education Committee, to work on Commission. The Secretary, county Education Office, Kingston-on-Thames.

No DATE.—Kenya Colony.—Inspectors of Works (2) required by the Government of Kenya Colony, for the Engineering Dept. Uganda Colony, for a tour of twenty to thirty months' service, with possible extension. Crown Agents for the Colonies, 4, Millbank, London, S.W. 1, quoting "M/13768."

THE COMMERCIAL MOTOR EXHIBITION

In our last issue we published particulars of some notable makes of lorries on show at the Commercial Motor Exhibition at Olympia. Below we give some further notes on vehicles which should be of interest to the building and allied trades. The exhibition closes to-morrow, November 7.

The Leyland Exhibit.

The number of Leyland motors on the road to-day is sufficient proof of their worth, and in no branch of industry have they proved so eminently satisfactory as in the building trade. In engine, chassis and body they are alike efficient and reliable. The "P.H.2," which we illustrate, is the goods model of the 5-ton group, and can be fitted with a large variety of goods-carrying bodies. By means of an ample fabric-to-metal clutch a substantial four-cylinder engine drives to a sliding pinion type of four-speed gear-box. The "Leyland Spherical Thrust," which has proved unfailingly successful since its introduction many years ago, is a noteworthy feature of the chassis. A feature of the engine is that accessibility has not been sacrificed to its compact and excrescence-free design, which renders thorough cleaning a rapid and easy operation. Other models of interest include a 4-ton three-way tipper and an 8-tonner fitted with an all-steel tipping body.

Dennis Bros. Exhibit.

Messrs. Dennis Bros., Ltd., are exhibiting several vehicles which should prove of interest to builders and contractors. Among these is the "E" type, low loading, with worm-drive and over-type chassis, the price of which, with a complete equipment of tools and a gear-driven speedometer, is £885. Where stone, girders, or any heavy material is transported in large quantities a lorry of this type is called for. As the height of the platform is only 24 in. above the ground, the number of foot-pounds of work saved is a very large percentage of the total. The wheel-base is 16 ft., a length equal to carrying anything but an "outsized" run of girdering, piping, &c. The tyres are 36 in. by 6 in., straight-sided pneumatics; hand-brakes work independently on the rear wheels, there being six in all.

The Harris & Hassell Exhibit.

Messrs. Harris & Hassell, Ltd., are exhibiting on Stand 2 their "Reo" three-way tipping speed wagon, price £380. This compact, vehicle develops 38 h.p. and carries the useful load of 25 cwt. The side and end-tipping body, operated by Walter's patent worm and screw

tipping gear, is easily manipulated by hand. The bolster frame is fitted behind the driver's canopy for carrying poles, timber, &c. The body is approximately 8 ft. long by 5 ft. 6 in. wide, 1 ft. 6 in. deep, and mounted on angle steel frame; the corners are plated, the uprights welded and reinforced; the bearers are of the sides of elm; the floor is strengthened with steel stays.

Dunlop Tyres Exhibit.

At Stand 227 the Dunlop Rubber Co., Ltd. are showing a representative range of wheels, disc, wire and artillery type. The Dunlop pneumatic tyres are being widely used for commercial vehicles on account of their great resiliency and wear-resisting power, though the ordinary pneumatic and solid tyres still retain a large vogue. The firm has experimented on and improved the latter in regard to possessing non-skid properties and at the same time not losing any of its durability.

On September 22 Mr. John F. Duff, racing his Bentley car at Monthery Speedway, broke the world's 24-hour record at an average speed of 95.02 miles per hour. The total miles covered was 2,280. Dunlop cord tyres were fitted and used throughout the twenty-four hours.

The Leyland and Birmingham Rubber Co., Ltd.

This company is exhibiting three types of well-known "Palatine" tyres—the solid rubber band tyre, guaranteed for 12,000 miles; the "Super," constructed specially for light vans to 2 tons weight, and guaranteed for 10,000 miles; and the large air cushion tyre. Their "Tholite" brake and clutch linings of pure metal asbestos, for motor and general engineering work, are also on view. Another product of interest exhibited on the stall is their sea-wagon and radiating hose. There are also samples of their rubber flooring in pleasing colours and marble patterns.

London Docks Improvements.

The Port of London Authority announce that the Government has now agreed to grant financial assistance for improvement schemes at the Tilbury, West India, and Millwall Docks. The work at Tilbury includes a new entrance lock, 1,000 ft. long, and a new dry dock 750 ft. in length. When the India and Millwall Dock improvements are completed, the largest vessel capable of coming so far up the river will be able to enter the south-west India Dock, the new lock, 550 ft. long and 80 ft. wide, to proceed by means of the passages to be constructed to any part of this system, which comprises a water area of 127 acres.

The "P.H.2" Leyland Lorry.

PROPOSED NEW BUILDINGS & OTHER WORKS*

On these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work, plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; M.W.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

BARROW.—The R.D.C. propose the erection of bridges over the brook at Cribyn, at a cost of £370.
BIRMINGHAM.—Plans have been approved by the Corporation for a three-story building at Ewham Works, for the use of a key-note, and for 11 houses in Queen's-road, Edgbaston. Spencer.
BIRMINGHAM.—The P.C. are recommending a site in the street-road for the erection of 50 houses.
BIRMINGHAM.—Hampshire E.C. has voted £642 for the erection of Wykeham House as a hostel in connection with the Andover's secondary school.
BIRMINGHAM.—Lancashire E.C. are acquiring premises for purposes of a school clinic.
ESSEX.—The R.D.C. has given sanction to the erection of 100 cottages.
GLoucester.—Lancashire C.C. has decided to spend bridge, at a cost of about £3,000.
GLoucester.—A site is being purchased by the shire E.C. for the erection of a new grammar school.
GLoucester.—Mr. C. F. Moxon, architect, Regent-street, South, has prepared plans for the erection of a school block for women and children at the Beckett and Dispensary, at an estimated cost of about £1,000. The Corporation are taking steps to acquire 35 acres near Pontefract-road for a housing site. Another housing site off Carlton-lane is being acquired. Outbuildings at the central school are to be erected at a cost of £700. The E.C. has decided to alter the B.E. that it is necessary to carry out certain alterations at St. Mary's School.
GLoucester.—Hampshire E.C. has arranged to re-erect the Council school, at a cost of £2,500.
GLoucester.—The L.C.C. recommend that, subject to the approval of the M.H., a site on the Dagenham estate, of Becontree, about half an acre in extent, be sold to the Council of the Baptist Union for the erection of a church.
GLoucester.—Higgins & Co., brewers, Bedford, propose to build an extension to the "Fox and Hounds" house, to plans prepared by Mr. E. H. C. Inskip of Liddington-road.
GLoucester.—The U.D.C. are to make application to the M.H. for sanction to a loan of £32,165 in connection with the erection of 66 houses on the Chilton's-lane estate.
GLoucester.—Land for a housing scheme is to be sold on the Vynor estate and the Borough Engineer is instructed to prepare plans for houses for the classes of tenants. In regard to the development of the Dell estate the Borough Engineer is to prepare plans for flats, with shops on the ground floor, to be obtained for a police station at South Offices for the water department are to be erected, at a cost of £1,500, on the reservoir site. A question of providing an open-air school is under consideration. The Borough Surveyor has requested to prepare plans of Corporation houses to be on the Hoylake-road.
GLoucester.—A new cinema, to seat about 1,500 persons, is to be erected in Stratford-road, Hall Green, as prepared by Mr. H. E. Farmer, F.R.I.B.A. (S. Hickton Farmer & Farmer), 57, Colmore-row, Birmingham.
GLoucester.—The Corporation have decided to retain the services of Mr. E. D. Dennis, architect, Clifton, in connection with the scheme for the erection of 100 houses on land at Hoo Hill. Messrs. Pollard, builders, Central-drive, have purchased land for the Corporation for the erection of 19 houses at Dagers Hall. The Blackpool Co-operative Society have a scheme in hand for erection of premises on Albert-road, Shepherd-street and Station-street. Mr. F. G. Russell proposes to erect a restaurant and shops on a site with frontages to Cornmarket and Bank-street. Messrs. Whitaker, architects, Burley-street, are preparing plans for houses on the Stoneyhill estate for Mr. W. H. A. start is shortly to be made on the site of a new church of St. Mark's, at Layton, which Mr. E. D. Dennis, architect, of Clifton, has prepared the plans. The T.C. are considering a suggestion that the Winter Gardens estate be used as a site for the Blackpool's new hall. The T.C. passed plans: Nine houses, shops and two garages, Park-road, for A. E. H. seven houses and stable, Layton-road, for Mr. Kerfoot; seventeen houses, Sharow-grove, for Mr. & Allen; nine houses, Queen Victoria-road, for F. White.
GLoucester.—The M.H. has held an inquiry into the front of the T.C. to borrow £17,000 for extending the front promenade.
GLoucester.—The Borough Engineer has prepared plans for a ram shelter and sanitary convenience at the junction of Ivy and Chorley Old-roads.
GLoucester.—The U.D.C. are proposing to erect 36 houses on Priory-road. Plans prepared by Halliday, and Agate, architects, 14, John Dalton-street, Manchester.
GLoucester.—The Baths Committee have considered preliminary sketch plans of district baths for Thornton negotiating with the Mental Deficiency Com-

mittee for the transfer of a piece of land abutting upon Thornton-road as a site for the proposed baths. The Corporation has arranged with Mr. J. Bickerdike, of Grove House, Bolton, to erect 200 subsidy houses on the Grove estate. The M.H. has sanctioned a loan of £74,052 for the erection of 166 dwellings on the Lower Grange estate. The L.N.E.R. has agreed to remove the railway bridge carrying Shotcliffe-lane over the disused railway cutting and fill up the cutting to make a roadway. The Heaton (Bradford) Estates Co., Ltd., are to erect fourteen houses in Duchy-drive. Amended plans are to be prepared by the City Architect for tramway loading barriers and shelters in Forster-square, at a cost of £2,000. The City Engineer has been asked to secure a site for the erection of new buildings, for the Thornton Grammar School. The Board of Control has promised the provision of additional accommodation for mentally deficient on the Westwood estate.
BRIGHTON.—The T.C. recommend that the modified sketch plans, now submitted, for the erection of a Junior Mixed school on the Hodshrove Meadow site, involving an increase in the estimated cost of the school from £12,310 to £13,660, be forwarded to the B.E. for approval, and that the Town Clerk make application to the M.H. for the loan. Details of the proposed open market has now been submitted to the Open Market Sub-Committee. The scheme prepared by the Borough Surveyor provides for the erection of 54 stalls. The cost is estimated to be £15,465. A big property purchase has been made within the past few days by the Council. It comprises the well-known range of drapery shops, seven in number, known as the Bon Marche, Western-road. The price is £55,000. Plans and estimates are being prepared for the proposed tidal bathing pool, which is estimated to cost £65,000. Including this scheme and the £100,000 Aquarium reconstruction scheme, the borough surveyor's department has now in hand works estimated to cost £571,210.
BURNLEY.—The C.B. is to apply to the M.H. for sanction to borrow £20,000 for the purpose of erecting shops and business premises on the land belonging to the Corporation in St. James's-street between Bethesda-street and Brown-street.
BURNLEY.—Lancashire E.C. are seeking consent to borrow £11,600 for the erection of an elementary school.
BURNLEY.—The T.C. has resolved to apply to the M.H. for permission to raise a loan of £7,000 to purchase Peak Hydro, and to effect necessary alterations and repairs for use.
CAULSHEAD.—Lancashire E.C. are purchasing a site at a cost of £1,250, for the erection of an elementary school.
CHADLE.—A new elementary school is to be provided in the Long-lane area.
CHESTERFIELD.—The E.C. are to provide three additional classrooms at Hasland Eyre-street Council school. The B.E. has given provisional approval to the scheme for the proposed school in Highfield-lane. The Corporation are negotiating with the Miners' Welfare Committee regarding a site for baths at Hasland Green. Wagstaff. Sons have been instructed to prepare plans for houses on the Racecourse estate. The Borough Engineer is to prepare plans for further development of the Highfield Hall housing estate.
CHORLEY.—The Borough Engineer has been asked to prepare a scheme for 76 houses on a site near Brindley-street. The E.C. suggest the provision of open-air classroom accommodation at the proposed Highfield Council school. The new gas showrooms are to be equipped at a cost of £300. The managers have prepared a scheme of improvements at the Parochial School.
CLANFIELD.—A site is being acquired by the Hampshire E.C. for the erection of an elementary school.
COALVILLE.—The U.D.C. has received sanction from the M.H. for a loan of £46,000 for the new housing scheme.
COULSDON.—Compulsory powers are to be sought by the Coulsdon and Purley U.D.C. for the purchase of a site in Brighton-road, Purley, for the erection of public offices and a fire station. A committee has been asked to secure a site for a depot. Plans are to be prepared for a ferro-concrete bridge at Foxley Hill-road.
CROMPTON.—The U.D.C. have approved plans for the erection of a new cotton warehouse for Messrs. John Clegg, Ltd., Sandy-lane Mills.
DAGENHAM.—The School Buildings and Supply Committee of the Essex E.C. have approved plans submitted by the County Architect for two new schools at an estimated cost of £29,000 each. The Special Sub-Committee recommended that schools Nos. 4 and 5 be proceeded with at once by direct labour under the supervision of the County Architect.
DERBY.—The C.C. have submitted plans to the B.E. for the erection of a temporary school, Langwith-road, Shirebrook. Plans are in the hands of the Surveyor for a proposed secondary school at Eckington.
DUKINFIELD.—The T.C. propose to enter forthwith into contracts for the purchase of land and erection of the houses to be erected in Zetland, Combermere and Spencer-streets.
EARSDON.—The U.D.C. is to erect 300 houses on the Earsdon Park site, at an estimated cost of £397 each.
EASTBOURNE.—A large arcade of shops and flats is to be erected in Victoria-place. Plans have been pre-

pared by North, Robin & Wilsdon, 35-39, Maddox-street, W.1.
EAST HAM.—The B.C. passed plans: Five houses, Flanders-road, for A. & H. Stokes; 18 houses, Little Ilford-lane and Trevelyan-avenue, for Herapath Bros.; 34 lock-up garages, near Broadway Cinema, High-street South, for F. W. Buen.

LIVERPOOL.—Plans have been prepared for a new tramway waiting room to be erected at the junction of Smithdown-road, Eastfield, and Penny-lane. Funds are being raised for the extension of the Hall for women students, Holy-road, Fairfield.
LONDON.—The L.C.C. recommend that repairs to the zinc flat over the art room at Harper-street L.C.C. school be carried out at £140.
LONDON (BALHAM).—The L.C.C. recommend that a room for the head of the evening institute and a lobby be formed at the Fircroft-road L.C.C. school, at a cost of £164 sanctioned for the purpose; and that tenders be invited for the work.
LONDON (CAMBERWELL).—The L.C.C. has purchased 62, 64, 66 and 68, Lomond-grove, for the rebuilding of Lomond-grove school.
LONDON (KENSINGTON).—The B.C. has received a scheme in response to an invitation for the acquisition and demolition of large blocks of property in the borough and the erection of improved dwellings on the

*also our List of Contracts, Competitions, etc.

cleared areas. The capital expenditure involved is given as £294,500.

LONDON (LEWISHAM).—The B.C. has authorised the District Valuer to enter into negotiations for the acquisition of the 43 acres of land in Grove Park which has been suggested suitable for the purpose of a housing site.

LONDON (PADDINGTON).—The L.C.C. recommend that the plans submitted by the managers of the St. John's temporary school, Titchborne-row, for the reconstruction of the boys' offices, be approved.

LONDON (PECKHAM).—The L.C.C. recommend that, subject to the approval of the B.E., expenditure not exceeding £182 be sanctioned for the adaptation of the disused chemical laboratory at Collier-road L.C.C. school, to form two classrooms, one to accommodate 24 myopic children and one to accommodate 20 myopic children.

LONDON (SOUTHWARK).—The B.C. has considered as to the possible utilisation of a site in Beresford-street for housing purposes. The site is owned by the L.C.C. The L.C.C. will dispose of the site for housing purposes for £1,800.—The L.C.C. Education Committee recommend that £375 be spent on improvements to Holland-street Council school.

LONDON (STAMFORD HILL).—The L.C.C. recommend that the work of extending the electric lighting at Stamford Hill stores depot be executed by direct labour.

LONDON (WESTMINSTER).—The Middlesex C.C. are to provide increased seating accommodation, at a cost of £350, at the Council Chamber of the Guildhall.

LUTON.—The T.C. has approved plans by the Borough Engineer for the erection of the dressing rooms, &c., on the Russell Rise playing field site, at an estimated cost of £535.—The Council has obtained property in Church-street, for improvements to the Highways depot.—Plans passed: J. T. Garrett, 12 houses, Farley-hill; W. D. Dyer, 10 houses, Argyl-avenue.

LYTHAM ST. ANNES.—A tram shelter is to be erected at the junction of Headroomgate and Highbury-road. The Corporation is to apply for sanction to borrow £2,000 for the provision of medical baths to be included in the Public Baths scheme.

MANCHESTER.—The Corporation Housing Committee are seeking sanction for 1,000 more houses.

MATLOCK.—The M.H. has sanctioned the application of the U.D.C. for a loan of £13,268 to construct 22 houses on the Lyn Holmes site. The clerk reported that the Ministry had also sanctioned a further loan of £1,375 for granting subsidies.

NEELSON.—Plans have been approved for the erection of a mixing room and store room at premises in Peter-street, for J. Spencer, and for a showroom and workshop in Charles-street, for Mr. W. Wood.

NORTHAMPTON.—The Northants C.C. has voted an expenditure of £500 on the provision of premises as temporary headquarters for the county library.—The governors of the Northampton Town School has prepared a scheme for the erection of a block of buildings.—The Northants. C.C. are considering the provision of another secondary school for boys.

NOTTINGHAM.—The Markets and Fairs Committee of the Corporation are contemplating the construction of a covered market in King Edward-street.

OLDHAM.—The C.B. passed plans for 32 houses in Lyndhurst-road, for F. Lord.

PORTSHEAD.—The R.D.C. are to erect 18 houses in Bristol-road, at an estimated cost of £500 each, and six houses in Woodill-avenue, at a cost of £600 each. Sanction has been received from the M.H.

PORTSMOUTH.—The T.C. is to buy White Hart Barracks from the Government for £4,500 for conversion into flats.

REGATE.—The Borough Engineer has prepared plans for houses on the Lodge estate, and tenders are to be invited. A housing site is being acquired at South Park.

ROTHERHAM.—Application is to be made to the M.H. for sanction to borrow £36,652, being the estimated cost of the erection of 66 houses on the East Dean estate. Plans have been approved for the new Cattle Market in Corporation-street.

ROWLEY REGIS.—The U.D.C. resolved to approve the lay-out of the site at Wheland-place and King-street, Cradley Heath, prepared by the surveyor, providing for the erection of 20 houses.—It was decided to obtain prices for the erection of four cast-iron houses at Hill-road, Tivdale.

ROXTON.—The Industrial Co-operative Society has purchased adjoining property to their establishments with a view to extensions.

RUXFORD.—The local branch of the British Legion has obtained land in York-street for the erection of their new club premises. The plans have been prepared by Mr. J. Wilding, the District Surveyor.

RUSHLEN.—Northants. C.C. are to adapt the North End infants' school as a practical instruction centre and laboratory.

ST. HELENS.—The Council has approved a resolution of the Water Committee which directed the Engineer to report on the proposal to establish slipper baths and washhouses at three centres in the borough. It is proposed to borrow £2,600 for the purchase of land in Rainford-road for an open-air school. A tender for the erection of an additional 50 houses at Windlehurst has been accepted subject to the approval of the M.H. It has been agreed that 100 steel houses shall be erected on sites to be selected.

SALFORD.—The C.B. recommend that application be made to the M.H. for sanction to subsidise a further 100 houses, and sanction to borrow £10,000 for the work.—The Council propose to borrow £1,318 to cover the cost of the erection of a steel-framed shed at the Central Car Depot, Pendleton, to be used for garaging motor omnibuses.

SHEFFIELD.—Work on the plans for the new memorial buildings and public hall, which are to cost approximately £300,000, is now in hand. The architect is Mr. E. Vincent Harris, F.R.I.B.A., 29, St. James's-square, S.W.1.—The E.C. has approved of plans for the erection of a new elementary school at

Stocksbridge. The school will accommodate 350 children. The estimated cost of the building is £35,000.

SHOREHAM.—The Shoreham and Lancing Sea Defence Commissioners are to raise the river bank from Old Shoreham Bridge to the railway bridge.

STAFFORD.—The T.C. has approved, on the recommendation of the Housing Committee, tenders for the erection of 30 municipal houses on the Littleworth estate, between Tixall and Weston roads.

STOURBRIDGE.—The Highways and Improvements Committee has passed plans for a sub-station at the corner of Foster-street and Birmingham-street for the Midland Electric Corporation for Power Distribution, Ltd.

STRABANE.—The R.D.C. has decided to have the Warden Bridge, Legfordum, rebuilt.

STRETFORD.—Lancashire E.C. are seeking sanction to borrow £64,000 for the erection of a boys' secondary school.

SUNDERLAND.—A deep water quay costing £250,000 is to be constructed in Sunderland harbour, if a Government grant can be obtained.

SWANSEA.—The Borough Engineer and Surveyor has been instructed to carry out repairs to the public convenience at Little Wind-street.—The B.E. has approved the establishment of an Orthopaedic Clinic in Dynevor-place.—Application is to be made to the Joint Asylum Committee with a view to that Committee considering the question of proceeding with the erection of the asylum at Swansea.—The C.B. are proposing to erect 112 houses on the Morriston housing site.—The Council has approved the erection of 100 houses in the Penderly Ward.—The Borough Engineer and Surveyor is to prepare plans for a new public convenience at the corner of Bridge-street, Prince of Wales-road, and Neath-road, adjoining the Aberdyerthi Bridge, at Hafod, at a cost of £1,050.—A convenience is to be erected at Phillips-parade to plans prepared by the Borough Engineer. Application is also to be made to the M.H. for sanction to borrow the monies.—The C.B. recommend that, subject to the approval of the B.E., the Borough Architect prepare plans to substitute water closets for the present bucket system, at the estimated cost of £550, at Peniel Green Council school.

TAVISTOCK.—The Council are asking for money necessary to increase the accommodation of Tavistock Hospital. The scheme will cost £8,000.

TROONE.—The C.C. propose to erect two elementary schools, one at Moordens and a boys' school facing North Eastern-road.

Warberton, architect, 2, Bold-street, for the erection of the new Club-house at Appleton, which provides accommodation for 300 members, and is estimated to cost from £4,500 to £5,000.—Funds are being raised by the members of St. Oswald's Church, Winwick, for the renewal of the heating apparatus, the installation of electric light, and the repair of the roofs, and stonework of the church generally, the estimated cost of the work is £2,600.

WEMBLEY.—Notice is given by the Middlesex E.C. to provide an elementary school at North Wembley for 400 children.

WHITEHAVEN.—The E.C. are to purchase the infirmary property in Howgill-street for conversion into a central school.—Plans have been approved for new conveniences at the baths, Duke-street, and the reconstruction of the convenience adjoining the market hall.—The Whitehaven Aged Miners' Homes Committee are to erect twenty-five houses at Arrowthwaite.

WIMBLEDON.—The Corporation are to obtain further land for the site selected for the new swimming bath.

WORKSOP.—The U.D.C. has decided to lend £40,000 to the Wigan Coal & Iron Co. for the building of houses at Manton.

YIEWSLEY (MIDDLESEX).—An £11,000 Wesleyan mission hall is to be built.

YORK.—The Streets and Buildings Committee of the City Council recommend that the British Reinforced Concrete Company be asked to prepare a scheme for a new ferro-concrete bridge across the River Ouse for submission to the M.T.

TRADE NEWS

Messrs. E. Parkinson (London), Ltd., contractors and slate and tile merchants, removed to larger premises at Nos. 189 and 191, High-road, South Tottenham, N.15. A number of their advertising campaign they are sending out humorous monthly calendars. These will be sent regularly on application to the above address.

Mr. Burnup, of Messrs. Incell & Silcock, Calcutta, arrives in London on November 6, and is desirous of arranging agencies for sanitary plumbing, and general engineering goods in India and Burma. Reference can be made to the Hong Kong and Shanghai Banking Corporation and the Imperial Bank of India, interviews arranged at the office of the Local Agents, Messrs. S. C. Clark & Co., Ltd., 1, Abchurch-lane, E.C. 4.

Bucks Road Resurfacing

Under the supervision of Mr. E. W. M. Inst. C.E., County Surveyor, Messrs. W. Shepherd & Sons, Ltd., are carrying out the resurfacing of a section of the American Wycombe road, making use of their asphalt.

Woodworkers' Tools and Machines.

We have received a catalogue (No. 25) from Messrs. R. Melhuish, Ltd., of 1, Abchurch-lane, Holborn-circus, E.C. 4. It is most complete—there are 1,100 illustrations; every tool for woodworkers of the latest pattern embodied in the list. The cost is 2s., but the amount is refunded on receipt of the first order of 10s. or more.

Hollow Chalk Bricks.

Hollow chalk bricks are now being manufactured that can be sold for 30s. per thousand. Such bricks were used in the building of quarters in France during the war. They have been carried out which show that such bricks will stand an average crushing weight of 2,100 lb. It is claimed that buildings constructed of this material are warm, dry, clean, and that in France they show no signs of deterioration and kept out the weather with walls 2½ in. thick. The bricks are manufactured at any chalk quarry.

"Harco" Chimneys and Cows.

Those who have had trouble with chimneys know to the full how capricious and obstinate they can be, and may perhaps come to the conclusion that the only remedy is to rebuild the whole flue—a costly operation. Messrs. G. A. Harvey & Co. Ltd., claim to have solved the difficulty by the introduction of a patent double-action smoke ejector, "The Harco," which, they say, has proved efficient in preventing down-draught and increasing draught in troublesome chimneys. The Harco is mounted on a steel frame supporting a centre bearing and oil reservoir, in which a specially tempered steel spindle is fitted. The interior framework offers no hindrance to sweep in cleaning the flue, but at the same time protects the spindle, oil reservoir and bearing from damage during this operation.

Carving.

To emphasise a door, mantelpiece or other feature, as a centre of interest in itself, or in contrast to plain surfaces, the value of carving is universally appreciated. Its function, being to attract attention, it is obviously better to dispense with it altogether than to have bad workmanship; the execution must be entrusted to a trained craftsman to produce a result that will satisfy the discriminating eye. The illustrations in the brochure were received from John Daymond & Son, together with the list of architects for whom they have executed such work, are a sufficient guarantee of their capabilities in this branch of craftsmanship. Messrs. Daymond & Son, carving in stone, marble, granite, alabaster, plaster and wood, and execute work in allied crafts as wood inlay, scale modelling, etc. The firm's offices are in Edward-street, Victoria-square, S.W.1.

Obituary.

The death has taken place at the age of 67 of Mr. Thomas James Pritchard, head of James Pritchard & Son, builders, of Finsbury.

THE PUBLIC WORKS EXHIBITION

The biennial "Public Works, Roads and Transport Congress and Exhibition" is to be held in the Royal Agricultural Hall, London, from November 19 to 26. Stress is laid on the fact that this is primarily a Congress, to which delegates from all over the kingdom are invited to hear papers read on developments in the public services, and to take part in the discussions which follow. At the same time an Exhibition is held, at which the principal engineering and other manufacturing firms of the country display the latest improvements in every form of machinery in use in the public services, so that delegates find the Congress of the greatest educational value in both the theory and practice of their professional calling.

The arrangements for the forthcoming Congress and Exhibition are now complete. Two sessions will be held on every day of the Congress, the first at 11.30 in the morning, and the second at 2.30 in the afternoon. The chairmen who have consented to preside at these sessions are all known as high authorities on the papers to be read. The subjects of these papers will be as wide in range as the activities of the delegates demand, but special attention will be given to road work and sewage problems. On the opening day, papers will be read on "The Partial Purification of Sewage by Activated Sludge"; "Activated Sludge Experiments at Bradford"; "Sewage Disposal in Rural Areas both from an Engineering and Economic Aspect"; and "Sludge Disposal." On roads and road engineering, papers will be read on "The Use of Tar in the Construction of Roadways"; "Road Corrugation"; "Repair of Roads against Tramway Tracks"; "Rural Roads"; "Mains in Public Highways"; and "The Strengthening and Widening of Bridges." Other sessions will be devoted to papers and discussion on Town Planning, Small Holdings, Housing, Gas Supply, Electricity Supply, Water Supply, and Refuse Collection and Disposal. Some 60,000 square ft. of space has already been applied for and allotted, so that the display of machinery, plant and materials will be larger and more comprehensive than ever before.

THE SCOTTISH BUILDERS

NEW BUILDINGS IN SCOTLAND

Aberdeen.—EXTENSIONS.—The Town Council has agreed to borrow on mortgage the sum of £125,000, under the authority of the Aberdeen Corporation Order, 1922, to meet capital expenditure already, or about to be, incurred, on behalf of the tramway undertaking. For the construction of buildings, £49,600 is to be spent and the rest on various works.

Edinburgh.—Plans have been prepared by Mr. W. J. Walker Todd (Messrs. Dick, Peddie & Walker Todd), 8, Albany-place, Edinburgh, for the adaptation of Colinton House into an annexe for the Murchison Castle School.

Edinburgh.—VILLAS.—The Dean of Guild Court has passed plans for the erection of 38 villas at Wardie, Granton-road, for J. W. Rough, per plans by G. Simpson, architect.

Edinburgh.—VARIOUS.—The Dean of Guild Court has granted the City Corporation permission to erect various types of houses of three, four, and five apartments each. A number of firms are concerned in the scheme, and the prices of the houses are to be from £390 to £509. Two houses designed by Principal Laurie, of Edinburgh, to cost £380 each, are also to be erected, as well as an Atholl house. There will be five blocks of houses in all.

Dundee.—GYMNASIUM.—It is proposed to proceed with the rebuilding of the gymnasium in Ward-road, the cost being £2,500. Mr. R. Gibson is the architect.

Greenock.—ALTERATIONS.—The Dean of Guild Court has passed plans for alterations to the premises at the corner of Sugarhouse-lane and Hamilton-street, for Messrs. Boots, chemists.

Currie.—CONVENIENCE.—The Calder D.C. of the Midlothian C.C. has decided to erect a public convenience at an estimated cost of £163 14s. 6d.

Bathgate.—WATER SCHEME.—The West Lothian County Council has sanctioned the negotiating of a loan of £362,000 for the purposes of a new enlarged water scheme for the Bathgate district of the county.

Lanarkshire.—HOUSES.—The Middle District Committee of the County Council decided to erect an additional 1,600 throughout various parts of the county new houses will be built at Strathaven, Blannochside, Viewpark, Uddingston, hill, Holytown, New Stevenston, Chapelhall, Newarthill, Cambuslang, New Torbothie, Netherthorn, Larkhall, Dalsert, Burn, East Kilbride, Busby, Meikle Edd, Ferniegair, Glenmavis, Caldercruix, Gl. Calderboig, Carmyle, Baillieston, Broom Bargeddie, Shotts (Dykehead), Harthill Stonehouse.

Perth.—WATER SUPPLY.—The Perth Council has received a report that in connection with the proposed water scheme from Loch Ordie amount to £218.

Cupar.—STEEL HOUSES.—The Town Council has fixed upon a site within the burgh for fifty steel houses which they have ordered.

Greenock.—HOUSES.—During the year were passed at the Dean of Guild Court dwellings, the great majority being for under the Corporation building schemes estimated value of new buildings, additional alterations authorised by the Court amount to £256,067, compared with an estimated of £139,200 in the previous year.

Calder.—STEEL HOUSES.—The D.C. Midlothian C.C. has agreed to build 6 houses on various sites, and also apply for new Government subsidy.

Steel Houses Deadlock.

An effort has been made at a private meeting in Glasgow by representatives of the authorities, Messrs. J. & G. Weir, Catholic the Federation of Building Trade Operatives remove the existing deadlock in regard to erection of steel houses. The position was discussed, and proposals submitted by parties engaged in the dispute, but no agreement it is understood, was reached. The difficulty in the negotiations appears to be question of piece-work and payment by which Messrs. Weir declare to be an essential part of their scheme for steel house building.

BUILDING TRADE WAGES IN SCOTLAND

NOVEMBER 13, 1925

WAR MEMORIALS AND SYMBOLISM

THE exhibition of so great a number of War Memorials in the War Museum at South Kensington gives one cause for wonder as to the point of view from which they have been designed. We are inclined to think that as the public generally look for something as good as possible for the funds at disposal, that the designers generally have had before them two or three alternatives: first, that of making some sort of symbolism the dominant feature; secondly, that of displaying chiefly the identity and names of certain war heroes or victims; or thirdly, that of combining the two in some sort of equal proportion. Of the methods is most definitely popular it is hard to say. Judging from the great array of models and designs now in the Museum, it is clear enough that the outlay on memorials of the war must have been enormous; in one town it was estimated something like one hundred thousand pounds had been spent upon them. When we remember that in every town and numberless villages throughout the country there is something to memorialise the war we must realise an enormous total of cost has been incurred, and it may be asked whether the results have justified the outlay.

From the point of view of the earnest critic it must be said that a great proportion of the total number of executed memorials have been indifferent or worse. A large number of designs exhibited only show what to avoid, and many are little more than execrable. We note that designs of the more pretentious sort mostly adopted are quite foreign to our traditional architectural design, and few indeed compare in the sense of fitness and adaptability to their surroundings with the charming memorial for the county borough of Wigan, by Sir Giles Scott. In some cases where the squarely outlined memorial looks well enough in the model, its effect as seen with a background of buildings is woefully poor. The Gothic style is perhaps on the whole the most successful. The designers, too, generally make a better show than the architects. It is a delightful work by Messrs. W. Reid Dick, Gilbert and Richard Goulden, Sir Hamo Thornycroft, Messrs. W. G. Ridsden and John Cassidy, Mrs. Meredith Williams and Mr. F. Clapperton.

The exhibition is one our readers should see, for any notice of it would be of little interest to them, however genuine. Several of the models are already familiar, and invite very definite criticism. Several memorials, even if they bring no genuine thrill of feeling, are at least well designed and pleasingly decorative, many of the panel designs are wholly satisfactory, such as the panels from French battle scenes, by Lt.-Col. Lafontaine and Mr. Reginald Hallward, the incised official headstones by Mr. MacDonald Gill. But the more striking effects are the impressive bronze memorial against a stone background at Heywood, by Mr. W. G. Ridsden; the fine sculptured work in the figure of the lion at the base of the memorial, by Mr. W. Reid Dick (the lion looking too large for the pedestal); and the graceful stag on a well-designed pedestal, by Sir Aston Webb & Son, at Hertford. An excellent

and sensible design is Sir John W. Simpson's memorial block, with wide-spreading seats at either side; such a design as this combines a certain useful beauty with a grand simplicity of treatment as a memorial of national grief.

With all its pronounced emphasis of failure and limitations, we cannot but admit evidences of much artistic skill on such things as Sir John Burnet's memorial chapel at Jerusalem; Sir Robert Lorimer's work at Paisley; and the simple and graceful treatment in some of Sir Edwin Lutyens's designs. Sir Reginald Blomfield, Harold Gibbons, Lawrence Turner, W. Reynolds Stephens and others help to maintain the better aspects of art, but for all we can see or feel the exhibition as a whole is a somewhat melancholy record of lost opportunities.

Criticism is cheap—it may be very cheap—but it is an inevitable and sometimes a useful function. It would be manifestly unfair to say that our architects and designers generally had failed to give signal evidence of their ability when this unprecedented opportunity has occurred for the display of their powers. But is it possible to say that anything which has been done has evoked a thrill of sincere emotion amongst us all? There are some which perhaps come near this, such as a fine figure of Nurse Cavell held aloft, with the simple wording, "Courage, Fortitude and Devotion"; but Sir George Frampton, with outstanding ability, has overloaded his subject and overstated his case.

But to turn from the commemoration of the individual to the symbolism of the universal expression of heroism and devotion which united the record of the lowliest soldier with those of the highest rank, the devoted labour of the humblest nurse with the overwhelming responsibilities of the statesman or general, who shall say that we have obtained a great memorial of universal appeal? A figure of Sorrow, such as the beautiful example produced by Mr. Reid Dick; a triumphant figure of Hope and Victory, supported by symbols of Strength, Patience, Valour, Enterprise, and Skill—yes, it sounds simple enough! But have we learnt the fine art of symbolism aright? When we think of Scott at the North Pole we think of the finest attributes which man can claim; but the Scott Monument is crowned by a splendid figure of Scott himself, and not by a symbol of that inside the man which lifted his doing far above his mere exterior expression. We are quite aware that the critic may turn round and say that the figure of a man may symbolise great things, just as a lion is taken to symbolise strength or a cat cunning. But man, even if he has created gods of very man-like qualities and looks, is only deeply stirred when he visualises things greater than himself. For him the sun symbolises Life, the stars Hope, the sea Mystery, and lightning the action of a God. No great and abiding impression can be created by the representation of the commonplace. No art, we know, is so difficult as that of the memorial; we have done the literary part very well, but have we not missed the greater inspiration?

The collection, which will remain on view till December 11, represents over one thousand memorials.

NOTES.

Waterloo Bridge.

It was only to be expected that the report of Sir Edwin Lutyens should point out the jeopardy of Waterloo Bridge which has been jeopardised by over-sailing parapets, and we have frequently pointed out, or by the fact of the bridge being the artistic values of Waterloo Bridge, and at the same time fairly deal with the increased amenities of traffic which are asked for. Our interpretation of the report is that the real solution lies in preserving the bridge intact, and to go on with a Charing Cross bridge, and perhaps a bridge from the eastern arm of the river. We have expert opinion that Waterloo Bridge can be preserved intact and remain useful, and we cannot therefore contemplate the rebuilding or widening of the bridge.

Opinions on Waterloo Bridge.

We are glad to see Sir Reginald Blomfield's manful letter to the *Times*. He protests against some of the suggestions in Sir Edwin's report, and goes on to say, "The feeling that Waterloo Bridge should be preserved, as it is, is deeper and far more widely spread than seems to be realised by those who talk airily of its possible destruction. Waterloo Bridge is something more than a mere means of transit from one side of the river to the other. It is a noble national monument, and it carries with it memories and associations of a period of tremendous stress, far too profound to be tampered with by anybody." Sir Reginald also points out that all those whose opinions should carry great weight in the matter have protested against the proposed destruction, and have urged the preservation of the bridge.

THE subject of architectural education has just recently been a theme on which the Presidents of the R.I.B.A. and the Architectural Association have made some interesting remarks in their Presidential addresses, and now we have before us (see p. 707) details of the reconstitution of the Board of Architectural Education. What appears to be an important part of the work of the Board is the periodical visits to the various schools which are made in order "to keep the Schools Committee in touch with all the schools recognised by the R.I.B.A. and ensure that a uniform standard is maintained. The inclusion of R.I.B.A. members, not specially concerned with education, both on the Board and on the Committee will make for breadth of view in the Board and for a wider knowledge of the Board's work in the Institute at large. By all of these means co-ordination is to be expected and the advice and assistance of the State and other educational authorities will be of great value and will enable the Board to discharge its duties with greater weight and efficiency."

Wet Time Pay.

PROGRESS appears to have been made with the proposals to pay for time lost by workmen in the building industry caused by wet or inclement weather, and we are glad to note that hopes are entertained that a scheme which has been put forward will be adopted at a joint meeting next Wednesday of the Master Builders' Federation and the Operatives' Federation. The

original proposals, it is understood, been somewhat modified, but it is to be hoped that some satisfactory scheme can be devised which will not add to the cost of building work, though if necessary there are few building owners who will be found to object to a slight increase in cost if only to remove an anomalous cause of much discontent in the building trade labour.

Advertising in Public Places.

IN referring to the letter of the President of the Royal Institute of Architects, which we in our last issue, Mr. Arthur Welford, a letter which we give elsewhere, out that if Sir Reginald Blomfield's suggestion that those responsible for vulgar street advertisements should be made to pay for them by way of a tax on a poster would be immediately on to the consumer of the advertised goods. We agree with him; but on another point still, *i.e.*, that nothing more than a tax on street advertisements do little or nothing to remedy the frequent offences against public decency, would, on the contrary, appear to be an easy means of legalising an abuse which is wanted is the control of such advertising, which is what the public is beginning to demand.

WE give in this issue charming examples of brickwork, many which could be of characteristic brick in all parts of the country, and glad to note that more attention is being given to brickwork as a house building material. Not only have we the able book on "English Brickwork" which these examples are taken from (noticed elsewhere), but we have the address of Sir Charles Ruthven, Director of Housing, in his presidential address to the Institution of Structural Engineers, an abstract of which is on p. 710. The popular brick, which had stood the test of time, as a handy unit, it is the best known and the best liked building material in existence for house building purposes, given a plentiful supply at a reasonable price, and the skilled labour necessary for its use, work executed by its aid, and cheap, lasting and artistic."

Decorative Work in Winter.

THE sensible suggestion made in our correspondence columns last week for some relief to unemployment in the painting trade at this more decorative and painting should be put in hand. There is sound reason why much painting should not be done in the winter, and our correspondents gave some reasons why the habit of deferring work until the spring should be broken.

From "A History of English Brickwork." (See p. 699.)
"King's Head" Inn, Sissinghurst, Kent

Weather Vanes at the Oast House, Crockham Hill, Kent.

Designed and made by Mr. F. J. SEDGWICKE.

IN his Presidential address at the Institution of Structural Engineers last week, Sir Charles Ruthen reviewed the methods of building which have been put to the test of experience in the present year. As he remarked, the problem of new methods of construction remains one of extraordinary difficulty; he mentioned that over 1,000 different methods have been submitted to Government Committees during the past few years. It would, we think, be helpful if some of our readers would give the results of such experience as they may have had in the use of concrete with the aid of shuttering or in building with concrete blocks.

WE have received the Annual Report of the National Institute for the Blind (224-8, Great Portland-street, W.1) for the financial year ended March 31, and we are glad to call attention to the admirable work carried out by this most useful body. The work of the Institute includes the publication of Braille embossed books, magazines and newspapers, and of Moon embossed books and periodicals—Moon being easily learned by the aged and the preparation by hand of text books in Braille for blind students, and the maintenance of a Students' Library; the publication of embossed music, and the works of British blind composers; the provision of apparatus for the blind, such as writing machines, mathematical cards, games, Braille watches, models, and the maintenance of homes for the blind, a massage school in London, a

guest house or the aged blind at Chester, a blind women's hostel in London and a convalescent and holiday home at St. Leonards-on-Sea; the relief of the blind poor; training and after-care of the adult blind and of blind ex-service men who are ineligible for pensions, and their blind dependants; the visitation and training of the blind in their own homes; the support of home industries for the blind, including supply of materials at cost price, sale of goods, augmentation of wages, etc.; technical and research work which may tend to lessen the burden of blindness; the employment of the blind; and assistance to local institutions and societies for the blind throughout the country in the form of financial assignments and allocations. Surely no Society can be more deserving of support than this Institute!

We may call attention to the soirée of the R.I.B.A. to be held this Friday evening, as although it is

likely to be a crowded meeting, there may be some of our readers who need a reminder of the function. The soirée is ostensibly to celebrate the amalgamation of the S.A. with the R.I.B.A., and the meeting should be a great success.

Hawarden War Memorial.

SIR GILES GILBERT SCOTT, R.A., Architect.

GENERAL NEWS

Lambeth Bridge.

The L.C.C. has decided to reconstruct Lambeth Bridge and to widen Lambeth-road, Albert Embankment, and Lambeth Palace-road, at a total estimated cost of £668,000.

University Architectural Tuition.

A decree has been passed at Oxford University authorising the provision of a course of lectures on English and Spanish architecture. At Cambridge it is being urged that architectural studies should be added to the faculties specified.

Birmingham-Mersey Canal.

The scheme for the improvement of the canal system between Birmingham and the Mersey to allow of navigation by larger boats was the subject of a recent conference at the Ministry of Transport. The total length of the route dealt with in the Birmingham to the Mersey scheme is 82 miles: from Broad-street, Birmingham, to the estuary of the Mersey, passing through an important industrial area of the Black Country, including Wolverhampton, thence through the Potteries to the Weaver Navigation. The total estimated cost of the scheme is £6,593,627, and the estimated annual cost, subject to certain deductions, is placed at £433,816.

The Foundling Hospital.

The Governors of the Foundling Hospital have entered into a provisional contract for the purchase of a Surrey estate, the Royal St. Anne's Schools, at Redhill, which is to serve as accommodation for their work pending the time when a suitable country property can be acquired.

London Town Planning.

Officials of the London County Council are at work on proposals for the re-planning of London. It is contemplated that the L.C.C. plan will cover the whole of London, and will be the basis to which future development and redevelopment will conform. The object of the plan is to provide sites adequate to modern building schemes, to improve the roads, and to avoid undue interference with the existing buildings of a permanent, institutional, or historical character.

Proposed London Churches.

The Bishop of Southwark has issued an appeal for £100,000 to be used towards the erection of twenty-five new churches for the new districts of South London.

St. James's Chapel, Liverpool.

The Mortuary chapel attached to St. James's Cemetery, Liverpool, has been reopened, following the completion of restoration work.

Preserving St. Paul's.

A meeting of the committee responsible for carrying out the work for the preservation of St. Paul's Cathedral has been held at the Mansion House. The work of cementation has gone forward satisfactorily, and the drilling and first injection of the holes in the crypt portion of the south transept piers has been completed. The initial drilling in the crypt portion of the nave piers was very nearly complete, a total footage of about 1,500 ft. having been drilled. After careful investigation and tests it had been decided to use a non-corrosive steel for reinforcement, this to be inserted and cemented into the holes when grouting had been completed. The construction of the piers in the crypt, as was expected, had been found to be very compact. Levelling and other observations mentioned in the last report were completed, and afforded reassuring evidence that neither settlement nor other disruptive movements in the dome area were taking place.

"Old London."

We notice that a correspondent to the *Eastbourne Chronicle*, Mr. E. A. Smith, states that "the lecture on 'Old London,' by Mr. H. C. Cox, F.C.A., organised by the Eastbourne

branch of the Order of Crusaders, in conjunction with *The Builder*, realised over £25. This has been equally divided and handed to the 'Tiny Tim (Cripples) Guild' and the Leaf Homœopathic Cottage Hospital."

Housing at West Bromwich.

The Swan Village scheme provides for the demolition of 102 houses, with displacement of 625 people, and the erection of 62 houses on the site. The estimated cost is £60,550.

Incorporated Institute of British Decorators.

The following gentlemen have been elected Honorary Fellows of the Incorporated Institute of British Decorators: Mr. Frank Brangwyn, R.A.; Sir Banister F. Fletcher, F.R.I.B.A.; Professor A. P. Laurie, M.A.; Mr. Eric Morley; Mr. W. H. Meggs; Mr. A. J. Healey, F.R.I.B.A.; and Mr. T. P. Bennett, F.R.I.B.A.

Concrete Houses.

The Ministry of Health, in its latest housing returns, announces that definite arrangements have been made for the erection of 24,060 concrete houses under the subsidy scheme. Of these, 4,606 houses have been completed, and 8,407 are now in course of erection.

Another Severn Bridge.

Atcham Bridge, which spans the River Severn three miles east of Shrewsbury, is in a bad condition. The Salop County Council has rejected a proposal that it should be widened and strengthened, and has decided to erect a new concrete bridge alongside, at an estimated cost of £50,000. The old bridge will be preserved as an ancient monument.

Roman Statuette.

A relic of Roman occupation has been found buried in some masonry close under Exeter's old city wall. Workmen clearing a site for a motor parking station discovered part of a statuette consisting of the torso and one arm. It is of stone, from Beer Quarries, in East Devon, which were largely worked by the Romans.

London Association of Slate Merchants.

Mr. E. Parkinson, of Messrs. E. Parkinson (London), Ltd., roofing contractors, of Tottenham, has been elected President of the London Association of Slate Merchants, Master Slaters and Tilers for the ensuing year.

Braunstone Estate, Leicester.

The Leicester Housing and Town-Planning Committee has purchased Braunstone Estate, including the hall, park, and five farms, for £115,000.

Alexandra Palace.

At a recent meeting of Edmonton Board of Guardians on relief work, the proposal was made that all the local authorities in the Edmonton Union (Edmonton, Wood Green, Hornsey, Southgate, Enfield and Tottenham) should combine in a big scheme for renovating the Alexandra Palace, which was badly in need of repair.

Heating of L.C.C. School Staff Rooms.

The L.C.C. recommend that the standard planning of elementary schools be varied by the omission of open fireplaces from the construction of teachers' rooms in new and remodelled schools, and the substitution of ordinary radiators connected with the central heating apparatus.

St. Thomas's Hospital Memorial.

The foundation stone of the new college house extension and students' club, which is being erected as a memorial to eighty-one students and members of the staff of St. Thomas's Hospital who fell in the war, was laid recently. Situated opposite the main hospital building in Lambeth Palace-road, the new club, in addition to affording opportunities for sport and recreation, will provide seventy-two bedrooms for the resident staff and students. Mr. W. H. Currey, F.S.I., L.R.I.B.A., of 37, Norfolk-street, W.C.2, is the architect.

COMPETITION NEWS

Church, Clacton-on-Sea.

The parishioners of St. Paul's Church, Clacton-on-Sea, are considering the question of building a new church. Sir Charles Nicholson suggested that a church to seat 900 persons be built in three sections. A report advocating invitation of competitive designs from a large number of architects has been adopted.

Competitions Open.

	Particulars published in "Builder."	See
Model Dwellings, Russia	Sept. 4 ..	N
Town Hall, &c., Pretoria. Open to architects residing in South Africa or Registered under Architects' Act, of 1909, Transvaal. Assessor to be appointed by R.I.B.A. Premiums: £250, £150, £100....		N
Argentine Institute. Premiums 10,000, 6,000, 4,000, 3,000, 2,000 gold pesos. Apply parties, 35, Old Queen-street, S.W.1	April 24 ..	J
New Buildings for Liverpool College, Mossley Hill. Sir Giles Gilbert Scott, R.A., Assessor. Premiums: £500, £300 and £200. Apply to J. H. Lintern, Secretary, Liverpool College, Sereton Park-road, Liverpool	Aug. 7 ..	J
Houses for Smaller Middle-Classes and Intellectual Workers. Held under auspices of International Federation of Building and Public Works. Prizes: 1st, 500 dollars; 2nd, 300 dollars; 3rd, 200 dollars. Write to Director-General of the International Federation, 17, Avenue Carnot, Paris ..	Oct. 30. ..	J
Art Gallery and Museum, Birkenhead. Limited to competitors practising within 20 miles of Birkenhead since January 1, 1923. Premiums: £250, £175, £100. Sir Robert Lorimer, A.R.A., assessor. £225 deposit. Apply Curator, Central Public Library, Birkenhead	Oct. 16 ..	J
Australian War Memorial, Canberra. Open to architects of Australian birth. Apply High Commissioner, Australia House, Strand, London	Aug. 14 ..	J
Royal National Eisteddfod of Wales, Swansea, Competitions: (1) National Parliament House of Wales (Prize, £100); (2) Street Facade to a Large Store (Prize, £25); (3) Set of Measured Drawings of Architecture (Prize, £25). Apply to General Secretary of Eisteddfod, W. Talog Williams, 24, Goat Street, Swansea, Mr. Arthur Keen, F.R.I.B.A., Assessor	Nov. 6. ..	M
Incorporated Architects in Scotland: (1) Rowand Anderson Medal and £100: City Art Gallery and Museum; (2) Rutland Prize (£50) for Study of Materials and Construction; (3) Prize (£10 to £15) for 3rd year Students in Scotland; (4) Maintenance Scholarship, £50 per annum for 3 years. Apply Secretary of the Incorporation, 15, Rutland-square, Edinburgh	Nov. 6. ..	J
Plan for construction of Conference Hall, for League of Nations, Geneva. International Competition, Sir John Burnet being British representative on Jury of Assessors. 100,000 Swiss francs to be divided among architects submitting best plans. Programmes with R.I.B.A., 9, Conduit-street, where intending competitors should apply. Single copies from Secretary-General, League of Nations, Geneva, on payment of 20 Swiss francs.	Jan. 2 ..	J

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Advertisements in Public Places.

SIR.—To those who do not wish to see, or to be influenced by them, advertisements in public places are an offence to the eye and usually an insult to the intelligence. Therefore, it is cheering to read the protests which were made by the President of the R.I.B.A. against the disfigurement of town and country, and by the proposer and seconder of the vote of thanks to him for his Presidential address. The remedies suggested by these gentlemen for the present state of things appear to be two: (1) to avoid buying offensively-advertised goods, and (2) to tax advertisements, presumably with the idea of "making the advertiser pay for it," and so discourage him in his practice of shrieking his wares.

As to (1): I now know that there are at least two people in the world who apply this as far as possible, but, unfortunately, the habit is not likely to become general. As to (2), Sir Reginald Blomfield is reported as saying: "Those responsible for these things inflict a great deal of annoyance on the community and should be made to pay for it." If "being made to pay for it" be meant in a punitive sense, perhaps some such punishment for those responsible for the advertisements, as being placed in the stocks in Piccadilly-circus or Leicester-square day and night for a month or so, might have good results. But if it be meant in a pecuniary sense then it has only to be pointed out that the cost to the advertiser of a stamp on a poster would be immediately passed on to the consumer of the advertised goods, effectually to dispose of this proposal as a deterrent to advertising. On the contrary, it would only add to the annoyance of the consumer to know that in buying goods he would pay not only for the advertisement of them, but also the tax on the advertisement.

To treat advertising in this way is rather like prescribing a poultice for a furred tongue caused by a liver attack, for advertising (in a general sense) is only a symptom of a disease and is not the disease itself. This disease—a sort of malnutrition—is caused by the ever-present shortage of community purchasing power to set off against goods created. Goods must be sold, but under our system of bank "loan"-fed industry there is never at any given time enough purchasing power in the country to buy the goods turned out, or those imported in exchange for those exported.

It is in the endeavour to get rid of the unsaleable surplus thus created that advertisers must try to create a desire in the minds of people to buy what they do not want with money which they either cannot afford or have not got. Poultices are useless; until the cause of the disease be removed the symptoms will always show themselves.

ARTHUR WELFORD.

St. Paul's Cathedral.

SIR,—I remember the time when St. Paul's was considered the embodiment of perfect construction, the only one in which all weights, stresses and strains had been mathematically worked out. (As a scientific construction St. Peter's was held up to scorn.) From a consideration of the drawings, from reports as to the condition of the building, and from speculation as to how it (particularly the dome) eventually embodied its present materials of construction, it is arguable that the building was far advanced before the construction of the dome was worked out. Were those surrounding buttresses designed to carry (along with the piers below) a much lighter dome? Not far away are there not huge, lightly-loaded piers? Did Wren, too late, regret not calling these to his aid vertically as well as laterally? Were not Wren's latter time yearly visits prompted by something more

serious than the agreeable contemplation of his masterpiece?

Wren was greater than those dealing with his work, for would he not have realised that the unequal spreading and sinking of an unequally loaded site (due to extraneous causes subsequent to his time) was the problem relatively to which all else was unimportant? Are not those vast sums now being spent in danger of being utterly lost?

There are two courses yet open: (1) To impound the site and conservatively but effectively repair the fabric. (2) Demolition and reconstruction elsewhere. Cost as well as sentiment must be considered. How would Wren decide?

We may be sure he would not spend money on an unstable site liable to be further disturbed by underground workings and unceasing vibration, continually increasing. Rather than incur the expense of impounding the site it is quite likely Wren would advise demolition.

Manchester.

A. HENTHORN STOTT.

Annual Cost of R.I.B.A. Diploma.

SIR,—In your leading article of August 28 last you have shown the difficulties experienced by the average architect in making any sort of livelihood, pointing out the improbability of his becoming even self-supporting at the age of thirty-five. It seems, therefore, doubly onerous that his hard-earned qualifying diploma should involve him in an annual charge considerably higher than that involved in the more remunerative professions. Having regard to the large increase in the revenue of the R.I.B.A., as from January 1 next, due to the absorption of the Society of Architects, it would seem an appropriate time for the Royal Institute to reduce the annual charge on members for the renewal of their diplomas to the pre-war rates.

In the case of the architect and surveyor who, in his young days, was enthusiastic enough to earn also the diploma of the Surveyors' Institu-

tion, the considerable outlay of nearly every ten years is necessary to enable him retain the two certificates of his professional qualifications. The chartered account usually enjoying a very much larger professional income, gets off with £32 10s. for the period, and the doctor is at liberty to retain his diploma without any recurring charge whatever. Architects and surveyors in practice are, as a whole, considerably worse off financially than in pre-war days, and no doubt the majority of members would concur that both the R.I.B.A. and the Surveyors' Institution could to advantage consider the possibility of reducing their subscriptions to something nearer the professional standard.

ZONAM PERDI

Tablets in Cathedrals.

SIR,—The Chairman of the Society for the Protection of Ancient Buildings, writing in the *Times*, proposing that no more wall tablets should be placed in our Cathedrals, forgets that if they are not to become mere lemons only, the life of our own time, a witness, should also be seen in them. In pointing to the necessity of wiser choice of what is included this appears to be the taken view of a purely negative attitude. Age is as able as another to give good advice if we go to the right source for them. The chairman of the S.P.A.B. would not appear to be acquainted with the good work done for if he were so there would be no ground for his objection. Or does he wish to see that good work is not to be obtained? This is a rather arrogant opinion to express. I rather incline to the belief that his experience lacks the knowledge to justify any such objection. There can be no objection, but every advantage to the life of the Church, to including our contribution of beauty to the Cathedral of this country, thus perpetuating their life is hereditary and continuous, and not

Memorial Tablet at Trefnant Church, North Wales.

SIR GILES GILBERT SCOTT, R.A., Architect.

THE ARCHITECTURE CLUB DINNER

J. C. SQUIRE (President) occupied the ninth dinner of the Architecture Club at the Savoy Hotel on Thursday of last week. Among those present were Messrs. Blow, Darcy Braddell, H. P. Cart-de-Blanc, E. Guy Dawber, Arthur J. Davis, W. Denning, Rudolf Dircks, J. H. Elderfield (Secretary), H. S. Goodhart-Rendel, E. Stanley Hamp, E. Vincent, P. D. Hepworth, Ralph Knott, Niel Lloyd, Ian MacAlister, Edward Oswald P. Milne, W. G. Newton, Plume, Howard Robertson, Herbert Rose, A. Dunbar Smith, Philip Tilden, Gerald Wellesley, H. C. D. Whinney, Wilson, and Professor J. Hubert Kingston.

Outlining the Club's activities, the President referred to the exhibition at the R.I.B.A. in Conduit-street, and expressed the hope that the premier architectural body should be housed in a more imposing building. Proposing the toast of "Architecture," Mr. SQUIRE said the ancients placed the arts in the order of architecture, sculpture, painting, music, and the drama. If we were to express our views of the fine arts we should include literature, oratory, dancing, and perhaps organisation. Of the fine arts, it seemed to him that architecture was the most beautiful and comprehensive, because while others might have charm, others fragrance, architecture might have all of them, and also might be coupled with them utility; architecture had the privileges of permanence and endurance. The people who had the architecture of London in their hands had the privilege of building that which would last permanently, and they could give to buildings all the beauty they chose. One of the most extravagant things in the world was the continued occupation of valuable land for pieces of architecture; three-quarters of London ought to have been pulled down years ago. It was too much the custom to allow a building to continue to occupy space as it would stand up, without reference to efficiency in occupying that space. Commerce had been the most backward in development. Public buildings were superb, and elsewhere; domestic architecture, particularly inland, was delightful; but commercial architecture had not been employed to the advantage of which it was capable. But more effort was being made in that direction. Through the Royal Institute the architects of the country felt the privilege of inspiring the public with the desire to do things in a better and still better way. Through the Royal Institute the architects of this country could make a stronger case for themselves. In America the architectural societies were recognised by the authorities, and no public work was undertaken without their consent, because the architects made themselves sufficiently strong to win recognition of their knowledge. It was a great pity that the streets they had recently seen in London had not been taken in hand by the Royal Institute and a plan conceived which would have made Regent-street one of the most beautiful things in the world. Regent-street was a very unfortunate instance: it should have been made as beautiful as the sixteenth-century architects could design, as it had been made as beautiful as the nineteenth-century architects could design. If they could teach the public the elements of architecture they would find fewer demands for buildings opposed to the first principles of architecture. Because he knew no better, he insisted on a building which might help him to sell a few more and sacrificed a satisfactory structure to his personal wish born of unintelligence. He would like to see the whole world come to London for the last thing in architecture.

E. GUY DAWBER, in seconding, said at the exhibition at the Galleries of the Royal Institute should convince anyone that

there was no fear as to the future of architecture in England. With regard to the premises in Conduit-street, the Royal Institute had been there for many years, and had long felt they had outgrown them, especially as during the past ten years they had come to an amalgamation of all the architectural bodies throughout Great Britain. The Council were negotiating for premises which would house the Royal Institute in a worthy manner. In London people only noticed architecture at all when certain buildings were referred to in the press. In the rural districts they were rapidly losing all the characteristics which made English country towns and districts so lovable and so beautiful, simply through indifference of the public. The care of villages and towns was almost always in the wrong hands. Whilst architects were doing their utmost to educate themselves up to the highest possible standard, the public should also do their share. Public schools and secondary schools should educate their students in the elements of seemliness, decency and proportion in building. If some teaching of that kind had been given during the past forty years we should not have

seen the degradation and spoliation of the countryside which had gone on. Small houses were being scattered all over the most beautiful parts of the country without the least regard for the districts in which they were situated, and an energetic effort to stop it should be made before it was too late. Local authorities paid not the least attention to the architecture and suitability of such buildings. Everyone tried to get away from London, but if the country were spoiled they would not be much better off there than in town. In considering Regent-street, it should be remembered that competitive designs were obtained for Kingsway, and some extraordinarily fine designs were produced. The London County Council were most anxious to have these designs carried out, but the shopkeepers wanted their own individual buildings, and would not put up with only a portion of the façade. Kingsway even now was one of the finest streets in London, probably owing to the fact that the bulk of the buildings had been designed by one firm of architects; but in Regent-street there had been a number of different architects, who had produced such an unfortunate result.

"Our Literary Side" was proposed by SIR CHARTRES BIRON, and responded to by MR. C. A. WILKINSON.

Oswestry War Memorial Tablet, in the Parish Church.
SIR GILES GILBERT SCOTT, R.A., Architect.

SIR EDWIN LUTYENS'S REPORT ON WATERLOO BRIDGE

IN response to the invitation of the L.C.C. to investigate the possibility of widening Waterloo Bridge, Sir Edwin Lutyens has now reported as follows:—

I have explored every avenue of approach to this problem with due regard to the data and drawings so generously supplied to me by Mr. Humphreys, yet I have, I fear, been unable to arrive at any satisfactory design whereby the bridge could be widened by corbelling out the parapets or any similar method of addition. Architectural detail might amend the schemes already put forward by the council's engineering office, and by others, that I have seen; or, again, those published at various times in the Press, for corbelling in this matter; but any such amendment would not affect the principle I am anxious to maintain, and I have come to the considered conclusion that there is no way of widening Waterloo Bridge by any such method without detrimental effect to its appearance.

To overhang footways would altogether destroy the architectural character of Rennie's bridge, which relies entirely upon its spontaneous and direct motif of arch and pillared buttresses. The narrowness of the bridge emphasises its robust character, and to link the buttresses with any horizontal line that would throw into shade the crown of the arches would completely mutilate the character of the original design, and would create, in fact, not only a new bridge but an ugly one. I have avoided conferences of any sort, so that I remain unprejudiced by divergent views on questions of repair or reconstruction. Good engineering, as good design, always follows the most direct method; and I cannot but believe that, no matter what the council's decision may be, the bridge, to be maintained, must eventually be rebuilt.

The scheme prepared to show how the bridge could be tunnelled with sub-footways is ingenious; yet I believe that Mr. Humphreys agrees with me that such a solution is one not altogether possible to recommend. The best way, if new footways are decided upon, would be to build them in suspension, as independent structures. They would, of necessity, mask the existing bridge, but whensoever, if ever, a Charing Cross or an Aldwych Bridge is built, and when built proves its prophesied relief to present traffic congestion, these independent footways could be removed, and the present bridge, having in the interval been kept intact awaiting this happier time, could then reveal her beauty once more. Admitting the possibility of a new and independent structure supplementing the existing bridge, it would be possible to build a new bridge of one span—over and above the existing bridge—either for foot passengers or for vehicular traffic. It would entail some 30 or 35 steps up from the level of Wellington-street to the upper bridge—an additional burden truly on those pedestrians who wish to cross the river from the Embankment, but one which might be appreciated as a small tax on the public, who have demonstrated their anxiety to save the bridge they so rightly admire. However, I think that only a small percentage of people wish to cross the bridge from the Embankment, as compared with those who cross it from the Strand level.

If a vehicular overhead bridge were contemplated, it would entail a road, starting from York- and Stamford-streets, with a gradient of 1 in 43 to give head room over the old bridge, which, on the Middlesex side, could be carried across the Strand to arrive at Aldwych in very much the same position as is proposed in Mr. Humphreys's under-road scheme. A bridge suspended above the old bridge would not destroy the effect of the yet existing bridge—though it might interfere with various buildings or Somerset House—facing

Wellington-street—and much could be said against such interference; but wherever one turns, or whatever solution is attempted, questions of this nature are bound to arise. London suffers, and will for ever suffer, from problems of this kind until such time as some definite plan and policy are adopted which will ensure, over a period of many years, the growth of a new and predestined London.

A suspended bridge in one span (an exciting problem for your engineers) would create the least disturbance to the lines of the still barely existing bridge; or, similarly, a series of spans, built in suspension to contradict the lines of the present arches. The bridge of one span would be the least disturbing to the views across the bridge of St. Paul's, or to the lines and design of Waterloo Bridge itself. Again, by heightening the bridge, I believe it is possible to widen it by 12 ft. 6 in., thus giving a 40-ft. carriage-way and two 7 ft. 6 in. footways, and this in the end may prove to be the simplest solution, if, when rebuilding, the piers are raised a minimum of 5 ft. and a maximum of 8 ft. 3 in. Rennie may not have foreseen the Embankment, and, for this or other reasons, that the bases of his columns would be awash at high tide. By raising the piers these bases could never be flooded, and the raising of the arches would increase the waterway between the piers and their abutments by a practical width of 3 ft. 6 in., and, incidentally, greatly improve the Victoria Embankment thoroughfare.

This would again improve the appearance of the bridge at high water. The parapets would remain level, and the traffic gradients required to reach the new level would be within the parapets above the first span on either bank. Widening the bridge will increase the relation between the pier lengths and their pillared buttresses, which are now, in my opinion, great in their æsthetic quality, a point which, I believe and deplore, few realise or appreciate; and for this reason it may not be considered a matter as great in importance as any scheme merely affecting the elevation.

I deeply regret that I have failed to find a sure way of widening Waterloo Bridge by any method which does not, in some way, mar its brave appearance. Yet I have only mentioned a few of the many ways in which I have endeavoured to discover an adequate solution of what I believe to be a nearly impossible problem—so to add to the amenities of Waterloo Bridge without affecting its æsthetic possession.

SOME OPINIONS ON THE REPORT.

Commenting in a letter to the *Times* on Sir Edwin's report, Sir Reginald Blomfield writes: "Imagine this gigantic arch in a single span above the existing bridge. As seen from either above or below the bridge, the effect would be that of some hideous nightmare, but apart from the portentous effect of such a bridge, it seems to be obviously impracticable. Sir Edwin says, 'A vehicular overhead bridge would entail a road starting from York- and Stamford-streets, with a gradient of 1 in 43 to give head room over the old bridge.' But the existing gradient of the approach from York-road to the south end of the bridge is about 1 in 36. Therefore the approach to the overhead bridge would not rise above the existing approach, but would burrow into it. What would happen on the north side goodness only knows, and apparently the poor old bridge would lie derelict and partly buried under this fantastic superstructure."

"As to the proposal to heighten the bridge in order to widen it, Sir Edwin suggests that this would improve its effect, although he himself had already pointed out that 'the narrowness of the bridge emphasises its robust character,' and that to widen it would spoil it, and

he further suggests that Rennie might not have foreseen that the bases of his columns be under water at high tide. Sir Edwin rest assured that Rennie knew very well what he was about, and that he realised that the Thames is a tidal river. As the water is always moving up or down, the water level, though it may appear constant for a short time, is never actually the same, and which might look well at the top of the bridge, personally I think they would be spoiled by heightening—might look intolerably when the tide was down. . . . In default of ignorance of the views of his colleague Sir Edwin) gives it as his opinion that the matter what the Council's decision may be, the bridge, to be maintained, must eventually be rebuilt.' Why 'must'? The question is rebuilding versus underpinning is a matter for engineers rather than for architects. It is well known that the almost unanimous opinion of architects, supported by very eminent engineers, is that the bridge can be underpinned, that repair, not reconstruction, is all that is necessary, and that on no account should the design of the bridge be altered in any way. . . ."

Mr. Arthur Keen, in an interview, said that it must not be forgotten that Waterloo Bridge should be regarded as a small bridge, and that the traffic should be dealt with elsewhere. Anyone who looked at the map of the city could see that the great body of street traffic flows from Regent-street for its centre and with Euston Road on the west and Tottenham Court-road on the east, constituted a triangle, the apex of which was Charing Cross, so that that was the one to deal with traffic, and not Waterloo Bridge.

Mr. Dalrymple-Hay said the strengthening of the foundations of the piers (of the bridge) was a simple and ordinary engineering proposition. It was the cheapest method that could be done to make it permanent. The foundations could be taken down to the London blue clay and spread out to give ample bearing resistance. If that were done the work could be carried out in a less manner than by any other proposal that has yet been made.

Sir Wilfrid Stokes (Past President of the British Engineers' Association, and chairman of a conference of engineers that agreed that a bridge could be made safe) said he agreed with the report, and nothing more fantastic than the idea of having a new span bridge across the existing structure. Engineering difficulties would be stupendous, the cost prohibitive, and the result hideous. He thought it practically impossible to have abutments that would carry the bridge. With regard to the suggestion that the bridge must be rebuilt, it should be remembered that only two of the arches were to be formed: the other parts of the bridge would be left perfectly sound. The only question was regard to the foundations, and for a comparatively small sum they could be put in order.

Mr. Ewart G. Culpin said he believed underpinning was an adequate remedy, that there was no excuse for rebuilding the bridge were taken down it would be rebuilt, and even if it were it would be Rennie's masterpiece. The bulk of the opinion was against Sir Edwin's contention that the bridge must come

White Lines on Highways.

The Minister of Transport has issued a statement dealing with the white lines on highways to reduce traffic risks; but it exists considerable diversity of opinion as to the different areas, steps are being taken to collate the views of local authorities. These have been considered, the Minister proposes to issue a circular letter to all authorities concerned with a view to standardising of white lines throughout the country as a whole.

HISTORY OF ENGLISH BRICKWORK

RE are encouraging signs that more is being taken in the traditional arts of building, as well as in the old crafts and towns in which so many beautiful examples of these crafts can be found. The use of timber, stone, brick, plaster and iron-work which can be seen in so many parts of the country is becoming more and more popular by means of photography and the illustrated press, while the great increase in travelling facilities affords opportunities denied former generations of visiting beautiful places. Perhaps to photography the press more than any other agency we must in bringing before the public these things and giving them some idea of the many examples of beautiful buildings to be found in the arts which go to their creation. Be it as it may, photography and the press have been employed in the production of an exceptionally fine book on English brickwork*, which contains a wealth of beautiful illustrations of some of the finest brickwork existing.

This is a book," says Sir Edwin Lutyens in his introduction, "that all who appreciate the art of brick building, and all architectural students, both young and old, who yet have ambitions to improve, should possess, read and re-read," and we believe this will be the verdict of those who read the authors' work. The arrangement of the contents is to be commended, for while a general historical note on the history of English brickwork is given, the subject is more particularly treated in short chapters such as: Brick sizes; prices, wages and output; brick-making; terra-cotta; tiles, Proclamations and Orders; tax on bricks; characteristics of brick; factors (form, colour and colour); association with other materials; manipulation of brick; table of measurements, &c. The author writes

well and, thanks to this, the interest of the subject and the good type, the "History" is a pleasure to read, and should be the means of extending the knowledge of the general public as well as that of architects, craftsmen and others more particularly interested in the possibilities of brick architecture. Most architects know what these possibilities are, and if this book adds to the knowledge of the general public—with whom, as the author says, rests the decision what domestic buildings shall be built and of what materials—the author will have deserved well of the community, and especially those who desire to see the fine brick traditions of the country carried on.

What this tradition is can be seen by those who may not know from the very fine collection of brick structures illustrated, two or three of which we reproduce this week. Brick is a material which was highly esteemed by Wren and some of our best architects, and examples of brick structures include some of the most picturesque to be found in any material and as durable. While a few of the examples shown are well known, they have been included because of their importance, but the majority, we are informed, have not previously appeared in any book, and almost all the photographs have been taken specially for this volume. Much could be said about the quality and charm of these illustrations—the careful selection of picturesque and serviceable types, which cannot fail to create or stimulate an appreciation of the many brick buildings of our towns and villages—and though many good brick buildings have not, of course, been included in the work, "it is believed that every important type is represented by at least one example," while a good many measured drawings have been included, adding to the usefulness of the work. We agree with Sir Edwin Lutyens that "Mr. Lloyd has done real service to a great English tradition," and with him we may "earnestly hope that English architects and builders will take heed and benefit so that our England will become yet more beautiful and the prevailing methods that so mar our country will cease; and that the

influence of this book will once more help to produce those beauties that were ours in times, alas! gone by." A fitting commentary on this is afforded by Mr. Lloyd in his short chapter on "Characteristics of Brick":—

"Provided fashion does not oust brick in favour of modern substitutes (fashion often succeeds in substituting the worse for the better) brick seems likely to hold its own for all ordinary building works. The buildings illustrated in this volume are proofs of the durability of brick, and the many admirable qualities they possess are so largely due to this material as to merit the closest study. Success in handling building material has ever depended upon intimate knowledge of its capabilities and limitations. Of no material is this truer than of brick, and the masterpieces of brickwork owe as much to the craftsman as to the designer. The failure of the late nineteenth-century brickwork revival was owing to the designer's failure to understand the material and to the extinction of intelligent craftsmen whose achievements in earlier work were the fruit of long and intimate experience."

The author must have devoted much time and research in the preparation of a delightful book, upon the production of which both he and the publisher can be heartily congratulated.

Restoration of the Jewel Tower.

The restoration of the Jewel Tower of Westminster, the only remaining portion of the Royal Palace in 1377, is now complete.

Swansea University College.

We understand that Lord Eustace Percy recently opened the new buildings at the Swansea University College for the faculty of arts and also those for the department of engineering. The block erected for the faculty of arts provides classrooms convertible into an assembly room and full specific library. The new engineering laboratories provide a floor space of 16,000 square feet, and when fully equipped the capital expenditure will amount to £50,000.

R.I.B.A. Archibald Dawnay Scholarships.

The R.I.B.A. Archibald Dawnay Scholarships are offered annually by the Royal Institute for competition between students of recognised schools, and are intended to foster the advanced study of all forms of construction, the economic and practical use of materials, and the logical expression in architectural design of structural elements. This year all the scholarships available have been awarded to the students of the Architectural Association, which is a testimony to the high standard which is being attained in the school in the study and delineation of construction and practical detail. The successful students are as follows:—R.I.B.A. Archibald Dawnay Scholarship of £75 for one year, Mr. J. Breakwell; R.I.B.A. Archibald Dawnay Scholarship of £50 for one year, Mr. W. R. Brinton; special additional R.I.B.A. Archibald Dawnay Scholarship of £50 for one year, Mr. R. P. Cummings.

Our illustrations show examples of the work of Mr. J. Breakwell, the subjects being working drawings which form part of the general school course.

A New Building in Leadenhall-street.

This additional corner building has been erected so as to form in every way, internally and externally, a continuation and completion of the London & Lancashire Insurance Co.'s existing premises, Nos. 149 to 155, Leadenhall-street. The Leadenhall-street elevation is designed so as to bring the main entrance to the Company's own offices in the centre of the building. At the angle of Leadenhall-street and Bishopsgate, a tower has been built containing an electric illuminated clock which can be readily seen, not only from the Mansion House, but also from the London Bridge end of Gracechurch-street. The new building contains ten stories, with a superficial area of approximately 24,000 ft. The complete premises now provide nearly two acres of floor space. The ground floor hall is lined with veined statuary marble, and Sicilian white marble is utilised on the lower ground floor and throughout the staircase. The exterior is in Portland stone, with granite base, and a bronze doorway gives access from Leadenhall-street to the ground floor premises. The upper floors are entered from Bishopsgate. Every part of the new building has excellent natural light. Carefully-considered schemes have been installed for electric lighting, central and domestic heating, mechanical ventilation, air washing and ozonising. An electric elevator is installed and posting chutes are placed on every landing.

The general contractors were Messrs. Ashby & Horner, and the following were sub-contractors: Mr. G. Hawkings, stone carving;

Davis, Bennett & Co., drainage and sanitary work, also boilers and heating and warming systems; Pinching & Walton, electric lighting and ozone machinery; Moreland, Hayne & Co., steel construction; The Kleine Patent Fire Resisting Flooring Syndicate, Ltd., reinforced floors; Crittall Manufacturing Co., bronze and steel windows; Fenning & Co., marble work; W. B. Simpson & Co., tiling and granolithic; P. Turpin, ornamental plaster ceilings, board room and luncheon room panelling; Express Lift Co., electric lift; Birmingham Guild, Ltd., ornamental lift enclosure and rails to staircase and bronze door and ornamental metal work; J. Kaye & Sons, locks and door furniture; A. Williams & Co., well sinking and pumps; Chatwood Safe Co., strong-room doors; The Standard Time Co., clocks and dials; Art Pavements & Decorations, Ltd., biancola partitions; The Luxfer Co., Ltd., glazing; Waygood-Otis, Ltd., letter chutes; The Gas Light & Coke Co., gas services and kitchen fittings; J. A. King & Co., Ltd., pavement lights, etc.; Val de Travers Asphalt Paving Co., Ltd., asphalt; Messrs. W. T. Allen & Co., railings to street and radiator grilles. Messrs. M. E. & O. H. Collins were the architects.

New Theatres Block, Cancer Hospital, S.W.

This extension to the Cancer Hospital replaces an old theatre that had been in use for fifty years. It has been erected as a memorial to the late Sir Charles Ryall, C.B.E., F.R.C.S., senior surgeon to the hospital for twenty-eight years. The scheme provides for a double operating unit with a complete group of auxiliary rooms. The extension occupies the site of the old maids' quarters on the third floor of the main buildings, formerly a high-pitched roof with dormer windows, and to prepare the lower structure for the new story a very considerable amount of work in the way of thickening walls, underpinning, steelwork, etc., was necessary. The planning of the extension was dominated by the outline of the old building, the position of the lift, the main stairs and the chimney shafts from the lower four floors, and the work was successfully carried out without interfering with the work of the hospital, beyond closing the wards on the second floor of the main building for about six months. The plan of the new story provides two operating theatres, with visitors' gallery to each (both galleries being connected and approached without entering the theatres), two anaesthetic rooms, two sterilising rooms and one main sterilising room, two wash-up rooms, sister's room, nurses' room, male and female visitors' rooms with lavatories attached, surgeon's room with bath and lavatory, and linen and instrument room. An X-ray room is provided, with dark room attached and a small pathological laboratory. The theatres, anaesthetic rooms, laboratory, etc., are planned facing north; the other rooms face south, the portions being divided by a wide corridor running due east and west. A wide easy stair is provided from the second floor, and an automatic push button bed-lift communicates with all floors from the basement upward. Wide iron escape stairs are arranged at either end of the main corridor.

The main façade is in red brick and Portland stone to harmonise with the existing building, and the roofs are covered with best Bangor slates with asphalt flats. A machinery and a tank room are provided on the roof at the back approached by a small stairs from the third floor. The internal finishings of walls are in Keene's cement painted and enamelled, the sterilising and wash-up rooms being tiled and the main corridor lined with marble and tiles inlaid for a height of 6 ft. The heating and hot-water supply is by radiators, all supplied through Royle's calorifiers, steam being supplied by a pair of Cochran vertical steam boilers in the boiler house in the basement. The floors of the theatres, etc., are in terrazzo, the X-ray room in rubber, the corridors in rubber with terrazzo margins, and the other rooms pitch pine wood block.

A very complete electrical installation is provided, including power points throughout

for various X-ray and surgical apparatus light used over the operating tables consists of a single crystal lamp inside a large reflector the lamp being capable of being moved in any directions and adjustable to any angle. Particular care has been taken with the internal finishings, doors, windows, etc. Projections and angles being eliminated as far as possible and every angle made convex or concave.

The general contractors were Messrs. Ashby & Hill (who also carried out the existing system of electric light, power, and fittings) and the following were sub-contractors: Redpath Brown, steelwork; Thos. Potter, heating and hot water supply; Carter & Co., tiling and terrazzo; Henry Hope & Sons, windows; Pinchin Johnson, satinette and John Bolding, sanitary fittings, including specially designed basins for the theatres; W. Alliot, sterilising apparatus; W. Otis, Ltd., lift; Western Electric Co., phones. Mr. Thomas A. Pole, A.R.C.S., was the architect.

A Sixteenth-Century Staircase.

This staircase is still to be seen in preservation in the Bate Hall Hotel, Cheshire, Macclesfield, in the ownership of Messrs. W. A. Smith & Sons, Ltd., Crown Buildings, Macclesfield. The building disguises its antiquity with a modern front, but writing of 1818, Ormrod, the Cheshire historian, described it as then "having long been used as a house," but that formerly it was the residence of the Stopfords, ancestors of the Earl of Courtown. In Ormrod's time it had a front "in the style of timber edifices for the Rows of Chester," and a very handsome lantern window over the archway. The aspect is still preserved at the rear, an archway with massive beams still leads to a cobbled courtyard; but the pride of it is the Tudor staircase with its massive posts and pendants of solid oak, and the balusters running up from the ground to the top landing.

We are indebted to Mr. Edgar Shuttleworth for the above note and the illustrations of the case.

MEETINGS

FRIDAY, November 13.

Royal Academy of Arts.—Professor Laurie, on "Painting Media: Oils, water-colours, and tempera." At Burlington House, 4 p.m.

Royal Institute of British Architects.—At 9, Conduit-street, W.1. 8.30 p.m.

London Society.—Sir F. Baines on "History and Preservation of Westminster Abbey." At 18, John-street, Adelphi, W.C.2. 5 p.m.

Town Planning Institute.—President's address by Professor P. Abercrombie. At Victoria-street, S.W.1. 6 p.m.

SATURDAY, November 14.

Institution of Structural Engineers.—Industrial Research Laboratories and Materials Testing Department of the City of Birmingham. 3 p.m.

MONDAY, November 16.

R.I.B.A.—Mr. Raymond Unwin, F.R.C.S., on "The Architect and His City." At Conduit-street. 8 p.m.

Royal Academy of Arts.—Professor Laurie on "Modern Pigments: Their Selection and Use." At Burlington House, 4 p.m.

TUESDAY, November 17.

College of Estate Management.—Mr. F. Unwin, F.R.I.B.A., on "Town Planning." 35, Lincoln's Inn Fields, W.C.2. 5.30 p.m.

Royal Academy of Arts.—Professor Laurie on "Methods of Wall Painting." At Burlington House, W.1. 4 p.m.

WEDNESDAY, November 18.

Royal Society of Arts.—Mr. I. C. Goode on "The Furniture of Hampton Court." John-street, Adelphi, W.C.2. 8 p.m.

Royal Academy of Arts.—Professor Laurie on "The Selection of Stone for Building." At Burlington House, W.1. 4 p.m.

BOTTOM FLIGHT.

TOP FLIGHT.

ROYAL ACADEMY EXHIBITION, 1925

Little Coates Church, Lincolnshire. Mr. Walter Tapper, F.R.I.B.A., Architect.

This is an enlargement of the existing church, which consists of a nave and south aisle, the latter about 6 ft. wide. To the north was added a new chancel and tower. The walls are faced with Weldon stone and coursed rubble with dressings of the same.

NEW PREMISES, LONDON & LANCASHIRE INSURANCE CO., LTD., LEADENHALL STREET, E.C.

ARCHITECTURAL SOCIETIES

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

Constitution of the Board of Architectural Education.

At the year 1920, the Council of the R.I.B.A. decided on the reconstitution of the Board of Architectural Education as soon as the necessary powers had been granted by the Privy Council. A new charter having come into operation this year, the matter was at once taken into consideration and the new constitution of the Board has now been approved by the Council. It has been decided to make the Board fully representative and bring it into touch with other bodies having interests allied or bound up with those of architectural education, to enlarge its scope, and to enable it to discharge its proper functions as the central authority, under the Council of the R.I.B.A., advising on architectural education throughout the Kingdom and in the Colonies.

With this object in view, the Board is to be reconstituted and is to have under it three committees with executive powers in all line matters, viz., Schools, Examinations, Prizes and Scholarships Committees, the Board itself, subject to confirmation by the Council, dealing with matters of general principle and policy. The Committees, being composed of representatives with great experience in the matters with which they will have to deal, and having power to act, greater efficiency and expedition is to be expected. Besides the committees there will be a small Board of Moderators, who will deal with the standard of examinations and testimonies of study and setting and marking of the actual examination papers. A small Visiting Board will perform similar functions in connection with the Schools and by periodical visits will be able to keep the Schools Committee in touch with the Schools recognised by the R.I.B.A. to ensure that a uniform standard is maintained. The inclusion of R.I.B.A. members, specially concerned with education, both on the Board and on the Committees, will make the Board of view in the Board and for a wider knowledge of the Board's work in the Institute. By all of those means co-ordination is to be expected and the advice and assistance of the State and other educational authorities will be of great value and will enable the Board to discharge its duties with greater skill and efficiency as will be seen from the proposed constitution which follows, the lists of subject, of course, to acceptance from the bodies concerned. The Chairman of the Board is Mr. Maurice E. Webb; Mr. Walter E. and Mr. Henry M. Fletcher, M.A., are Vice-Chairmen; and Mr. L. Sylvester Sullivan is Secretary.

Constitution of the Board of Architectural Education:—

One representative from each School of Architecture recognised for exemption from the Final Examination (at present seven, omitting McGill University and Sydney University).

One representative of the Governing Bodies of the Universities, including Oxford, Cambridge and London, and three others to be nominated by the Standing Committee of Vice-Chancellors and Principals of the Universities of Great Britain and Ireland.

The Director of Education, School of Architecture, the Architectural Association.

Schools of Architecture recognised for exemption only from the Intermediate Examination—

One representative for every two schools by ballot (at present eight, including the Northern Polytechnic and the R.W.A. School of Architecture, Bristol, but excluding the Bombay School of Art and the University of Toronto).

Polytechnics teaching architecture, Technical Schools teaching architecture, and Art Schools teaching architecture, to be nominated by the Society of Art Masters.

H.M. Board of Education.

The Director of Education, the London County Council.

The Headmasters' Conference.

The Association of Architects, Surveyors and Technical Assistants.

The Institute of Builders.

The Master of the Art Workers' Guild.

The Royal Society of Arts.

The Incorporation of Architects in Scotland.

The Royal Institute of the Architects of Ireland.

The British School of Rome, Faculty of Architecture.

The Royal Academy School of Architecture.

The President of the Town-planning Institute.

The President, R.I.B.A.

The Hon. Secretary, R.I.B.A.

The Chairman of the Allied Societies' Conference.

The President of the Architectural Association.

Thirteen R.I.B.A. members, excluding the officers of the Board, to be appointed by the Council on the recommendation of the Board of Architectural Education (one-third, excluding the officers of the Board, to retire every year).

2. Schools Committee.—

One representative from each School of Architecture recognised for exemption from the Final Examination (at present seven, omitting McGill University and Sydney University).

One representative from each School of Architecture recognised for exemption only from the Intermediate Examination (at present eight, including the Northern Polytechnic and the R.W.A. School of Architecture, Bristol, but excluding the Bombay School of Art and the University of Toronto).

R.I.B.A. Members.

H.M. Board of Education Inspector.

The Director of Education, the London County Council.

Polytechnics, Technical School and Art Schools teaching architecture.

R.I.B.A. Visiting Board.

3. Prizes and Scholarships Committee.—

A Vice-Chairman of the Board (Chairman).

R.I.B.A. Members.

Schools of Architecture.

R.I.B.A. and other Prizewinners.

The Director of Education, the London County Council.

H.M. Board of Education.

British School at Rome, Faculty of Architecture.

4. Examinations Committee.—

A Vice-Chairman of the Board (Chairman).

The Board of Moderators.

R.I.B.A. Examiners (Intermediate Examination and Final Examination).

The Registration Committee.

R.I.B.A. Statutory Examiners.

R.I.B.A. Town-planning Examiners.

R.I.B.A. External Examiners.

R.I.B.A. Members.

The Association of Architects, Surveyors and Technical Assistants.

5. Board of Moderators.—

R.I.B.A. Members (Ex-Examiners).

6. R.I.B.A. Visiting Board.—

The Chairman of the Board, Chairman of the Visiting Board.

A Vice-Chairman of the Board.

The Hon. Secretary of the Board.

A Teaching Member.

7. Problems in Design and Testimonies of Study.—

A panel of twelve examiners will be set up to deal with problems in Design and Testimonies of Study.

Town Planning and Students of Architecture.

On Monday, November 16, at 8 p.m., Dr. Raymond Unwin will deliver a lecture at the R.I.B.A. entitled "The Architect and his

City." The main purpose of the lecture is to interest students of architecture in the subjects of town planning and housing, and it is the special hope of the Council that there will be a large gathering of students from the schools of architecture in the London area. Admission to the meeting will be free, and it is only necessary for those attending to sign their names in the book on arrival.

THE ARCHITECTURAL ASSOCIATION OF IRELAND.

In the course of his inaugural address to the Architectural Association of Ireland, given on November 3, the President, Mr. W. A. Dixon, M.R.I.A.I., referring to the question of architectural education, said that in future their students would have the use of the studio at University College, and the help and guidance of the studio master, together with other advantages in the form of lectures, etc. An atmosphere would be created wherein a student would feel the friendly rivalry of his fellows, thus stirring up within him the desire to put his best into his work. Exchange of ideas was also more possible in the studio, and the desire to help one another would be fostered. In the studio the students would be guided in their work by a studio master, whose duty it would be gradually to lead them on from one stage to another, applying an occasional test in order to ascertain if the students were keeping the pace; to help them out of difficulties, and to assist and encourage them to express what was within them, and then to show them how to mould the rough thoughts which they jotted down into workable form.

Fundamental principles would be explained, and the student shown that these existed in some form in every known example of their art which was accepted as being worthy of study. In this way, the student was brought into contact with history in a pleasant form, and he would not regard this subject as a thing which involved a concise knowledge of dates, but as a sort of story book which explained how our system of styles came into existence. He would realise that where the principles which he was endeavouring to grasp had been violated the result had been more or less chaos.

Having acquired a knowledge of these basic matters, the student would be permitted to put some of them into practice, by the preparation of designs of an elementary character. In this way, a sound basis would be laid for more advanced design and building construction. The nature and uses of building materials would, of course, find places in the programme, and in addition freehand drawing and draughtsmanship generally.

Northern Ancient Monuments Scheduled.

Section 14 of the Ancient Monuments Act of 1913 is now applicable to an additional list of structures, including the following: Lancashire: Cartmel Priory, Gatehouse; Wraysholme Tower, Ulverston; Knapperthaw stone circle, Lowick; Urswick British settlement; Gleaston Castle; Castle Hill, Pennington; camp near Holme Bank Plantation, Urswick. Westmorland: Gunnerkeld stone circle, Shap; Castlesteads British settlement, the Helm, near Kendal; Scalford British settlement, near Kirkby Lonsdale; Millrigg British settlement, Kentmere; Hugill British settlement, near High Borran; Ewaclose British settlement, Crosby Ravensworth; "Druids' Circle" on Knipe Scar, Bampton.

Middlesex Hospital.

As a first step towards the Middlesex Hospital rebuilding scheme, the west wing will be closed in January. Ten wards, some of which were used for French Revolution emigrants, will disappear, and the 200 patients affected will be accommodated in an old infirmary in Cleveland-street, which will be fitted up as a complete hospital during the reconstruction of the old building. £210,000 has been subscribed towards the £500,000 required.

HOUSING AFTER SLUM CLEARANCE

In the course of a lecture on this subject given at Norwich for the Chadwick Trust on November 5, Professor S. D. Adshead said that the worn-out, unhealthy slum areas in Norwich were very old. Rebuilt several times, they dated not from the eighteenth and the first half of the nineteenth century, but from mediæval times. Broadly speaking, there were two classes of slum areas in English towns—the one, commonly found in our old market towns, was picturesque; and the other, found in our towns that prospered at the commencement of the nineteenth century, had a skin deep interest in its architectural traditions. Most towns that had developed abnormally since 1875 had their terraces of monotonous houses—they were the horrible expression of a super-industrial age, vulgar in appearance and machine-like in their arrangement, but with rare exceptions they could not be described as unhealthy, nor could they be classed as slums.

The greatest difficulty in connection with a clearance scheme was that of removing the people. The difficulties were: (1) You had nowhere to send them to when you drove them out. (2) If you had provided alternative accommodation it would be unsuitable in position for a large proportion of your dispossessed. (3) You could not to-day evict large numbers of people whatever your legal powers. We were not living in last century when the supply of the speculative builder was ahead of the demand. This question of reconstructing unhealthy areas and rehousing the dispossessed, to be dealt with in a statesmanlike way, meant adopting measures and methods that extended far beyond the confines of the area affected. This was the way of the physician; the other was the way of the surgeon. Surgical operations were necessary, and a very great deal of thought would have to be given to the methods of the surgeon, perhaps more thought than to the prescriptions of the physician; but at the same time we must not forget that, in the end, the solution of the problem of clearing out and rebuilding unhealthy areas lay in the slow but steady growth of a well-thought-out development plan for the town. The problem, however, was too urgent and too intimate to depend for the solution entirely upon such comprehensive methods. We must, perforce, resort to the surgical operation.

Where we had a congested population in the worn-out area of a town, to depend on anything short of attracting the population to vacant houses that were hard-by was too remote. It was not sufficient even to provide suitable accommodation in outlying areas of the town, much less to depend upon migration to new satellite towns. The extension of the suburbs coupled with improved facilities for transport would help, as also would the founding of new towns, but the process of spreading the population in this way, though sane, was too slow of realisation. The new place would be occupied by the more enterprising of the people, and by the people who were not necessarily down at heel. The problem of slum clearance could be greatly assisted by migration, but could never be entirely solved in that way. It must always depend upon repairing and rebuilding, if not on the site affected, at any rate in the most easily accessible one that could be found.

With such financial assistance, and with such untried and complicated powers as were provided by the four Housing Acts, occasion was offered in the carrying out of a scheme for the exercise of considerable technical skill. Within the scope of the law, it would appear to be quite easy for a local authority to burden itself with a great deal of unnecessary pulling down, perhaps owing to a very indifferent plan having been prepared; perhaps owing to houses being included that could be better dealt with under Section 17 of the Act of 1909 (now clause 11, subsection 1, Act 1925); perhaps owing to difficulties arising due to inadequate

arrangements having been made for the rehousing of the dispossessed; and lastly, perhaps owing to unnecessary litigation being entered into owing to inclusion in the area of buildings which were not houses and which need not have been included had a really clever plan been prepared.

It was of the greatest importance to prepare a really clever plan. It would have to be a rather cunning plan—a plan that had been prepared with a very clear recognition of the obligation of owners, as well as of the local authority; a plan which dovetailed its radical improvements into an area of houses and buildings of varying interests, and over which varying powers could be exercised in such a way as to appear when the work was completed that the whole area had been dealt with as though it were a scheme under Part I. He ventured to suggest that from the financial point of view, as well as the social and administrative, the success of a scheme would depend more upon the making of a really good plan than upon any of those other factors, such as the valuing and acquiring of sites, the borrowing of money, and the settling of disputes.

What an architect had first to decide after having examined an unhealthy area, was as to what could be put into a reasonably fit condition and what must be pulled down—either because it was too congested or too worn out. If the buildings were reasonably sound—whitewash, the insertion of a damp course, improved sanitation, and perhaps a new roof covering would often be better and cheaper than pulling down. In the main, pulling down was necessary, not for the purpose of rebuilding, but for the purpose of providing light and air. Pulling down was also necessary where buildings were really worn out. Old and worn-out houses are like worn-out machinery. If funds would run to it, it was nearly always a better proposition to pull down entirely and rebuild. There would be a big loss at the outset, but a much bigger return in the long run.

It had always been an open question, the extent that the tenants of worn-out property could be re-housed in the new buildings that would be erected on their site. Liverpool claimed to have practically rehoused the whole of the dispossessed in certain areas. The County Council, he understood, under Mr. Riley's superintendence, managed to house a certain proportion, but by no means all. His own experience in the work at Kennington led him to assume that unless some very special arrangements were made with the old tenants, there was very little likelihood of rehousing on the area more than a very small proportion, and these only amongst the very poorest class.

In an area with which he was interested there appeared to be no solution of this difficulty except by erecting temporary huts in a big open square and utilising them as the passing abode of tenants temporarily dis-housed. Another solution which seemed to be recommending itself to certain local authorities of smaller industrial towns with which he was acquainted was to erect groups of houses on the nearest possible vacant land to the slum, with the hope that the whole of the dispossessed could be attracted to these new houses. He did not think it could be said that as yet there had been any real experience of such a scheme of rehousing, and it remained to be seen to what extent there was a possibility of such a solution, but his own view was that the class of tenant who occupied these very old houses was not a class which could be readily removed to any distance from one district to another, and it would always be found necessary to erect some type of block building on the area of the dispossessed, at any rate, to accommodate the older and more deeply rooted occupants of the slums.

At the present moment we were at the parting of ways. On the one hand we had Mr.

Topham Forrest proposing the erection of a nine-story building for St. Pancras with a view to rehousing the whole of the inhabitants of a crowded area by vertical replanning. Topham Forrest's suggestion was that such a building should be of steel construction, proof, constructed with a brick outer skin and an inner concrete lining and concrete partitions, one fireplace to each tenement, central heating, the staircases to be centrally disposed.

The argument for tall buildings—such as now appeared to be the policy of the London County Council to erect—was that in such buildings a much larger number of people could be accommodated on the same area. There was also the point that a high building helped to pay ground rent. Personally he thought this latter argument was entirely delusion, as unless the land was frightfully expensive, which it need not be if purchased under the recent Housing Acts, the cost of extra thick walls and fireproof staircases in meeting all the requirements of the Building Acts connected with the building of tall houses became so great as completely to extinguish any saving that might appear effected in ground rent.

Personally he had greater faith in the slow and the spread of cities than most people. He thought as a general policy it was a mistake nowadays to erect without lifts buildings for the working classes of a greater height than three stories. It was entirely a different matter when it came to the middle-class with lifts. We had yet to be convinced that provided there was adequate space between buildings, any greater number of people could be housed on an area in tall buildings, say five stories, than in buildings three or four stories high only. On the Duchy of Cornwall estate at Kennington, so far it had always been the policy to confine the heights of buildings to three stories, and no one had regretted it.

There were a great number of new type buildings, apart from ways of dealing with old ones, all suited to the accommodation of the working classes in towns, but the question from his experience, which appeared to be a very great majority of people that occupied these areas, was the two-story flat. He believed the London County Council was fitting two-story tenements into six-story buildings, one on top of another, and that was a good deal to be said for this. It was always likely to be a better circulation of air in a two-story building than in a six-story flat.

Then there was a very interesting kind of building, of which there were a few examples in London—dwellings with their fronts turned towards an inner court instead of to the street. A building of this type was erected on the Prince of Wales' estate at Kennington for 52 tenants. The streets outside were wide and all interest was centred on an inner garden.

He did not know if a record was available as to the number of acres of unhealthy areas in England, but it must be very large. He regarded the clearance of the unhealthy areas as one of the biggest problems we had to tackle. All interest seemed to be centred on the little house in the garden city or in the suburb, and practically not the slightest attention had been paid since the war to the dwellings in the slum. He was quite inarticulate as to his votes did not appear to count, but it was these areas that the more poisonous elements of society were nourished.

Yarmouth Church Restoration.

The work of restoration of the parish church of Yarmouth has been completed at a cost of £75,000 during the eighty years since it was taken, Messrs. Bodley & Hare being the recent architects concerned. The church was founded in 1105, and is now the largest church in England.

THE SURVEYORS' INSTITUTION

PRESIDENTIAL ADDRESS.

the course of his opening address to the Surveyors' Institution on November 9, Mr. D. Wallis, President, referred to many of the current interest, including the Rating and Valuation Bill, and the proposed registration. Referring to the Rating and Valuation Bill, he said he thought that had cured some of the abuses which had been set up under the Lands Clauses Acts, and particularly was the improvement to be found in the reduction of the cost of arbitrations and the expedition with which they were now decided. It was no longer necessary for a party in a dispute as to compensation to consider whether they had not better make a compromise, or perhaps an unreasonable concession, rather than incur the heavy expense and uncertainty of an arbitration. Costs were now kept within reasonable limits, and the procedure was greatly simplified. Turning to one or two problems which presented the surveyor who is dealing with the compulsory acquisition or use of land for the purpose of providing houses for the working classes, the President gave first place, on account of its pressing importance, to a plea for an early amendment of Section 9 of the Rating and Town-planning Act, 1919, now enacted in Section 46 of the Housing Act, 1920, but which, for the sake of clearness, he referred to as Section 9.

This section provided that where property compulsorily acquired for the improvement or construction of an unhealthy area, the compensation for the land and buildings in the healthy area was to be the value of the property, as if cleared of buildings, subject to deduction in the compensation for the site value made in the improvement for the rehousing of persons of the working classes on the site when cleared. It was argued, and with some force, that the guiding principle of the section was sound. Dwelling-houses occupied by persons of the working classes were insanitary, and in such a condition that they were unfit for human habitation, they might be condemned and a compulsory order enforced. It would be unreasonable in such circumstances to suggest that compensation should be paid for the condemned buildings on the site merely because they were acquired compulsorily for the purpose of clearing an insanitary area. The difficulty and injustice arose not so much from any faulty application as from the fact that cases of extreme hardship were bound to arise when the section which might be quite justifiable in individual cases, was applied in a wholesale manner to a considerable number of dwelling-houses in varying stages of dilapidation. Many of these houses might be on the border line, some of them might not be insanitary. Some were included because of their unsavoury surroundings. Indeed, it was not uncommonly found that premises which were not insanitary were included in the insanitary area because of their environment.

He had the opportunity as an official speaker of hearing a number of these cases in different towns. In some instances he had met with any real hardship, but in other cases he had found that business and commercial premises had been included in the insanitary area and that persons earning their livelihood from their own premises had been deprived of their right to compensation for buildings, plant, fixtures, loss of business or removal, although the premises were not in themselves insanitary and were not used mainly as dwelling-houses. In such cases he had given his opinion with considerable reluctance and with a feeling that an amendment of the Act was very much required.

Matters of considerable importance, upon which it was to be regretted that no decision had been reached, had yet been obtained, was the question, made, he believed, by the Rating and Valuation Bill, that in all the arbitrations which had

been held under Section 9, that the wording of the section prevented payment of compensation for machinery, plant, loss of business, or removal. The wording of the section was that "the compensation to be paid for the land, including any buildings thereon, shall be the value at the time the valuation is made of the land as a site cleared of buildings." Did the words specifying that the compensation was to be the value of "the land as a site cleared of buildings" mean that the owner was to receive no compensation for removal or for loss of business? How the High Court would decide this question he could not say, but he hoped that such an amendment of the Act might be made by Parliament that it might not be necessary to trouble the High Court. As a matter of simple justice it should be provided that fair compensation should be paid for destruction of business or trade.

In connection with the clearance of slums he said a word in favour of the extension of town planning to land already built upon in our large manufacturing towns. The present system, or want of system, seemed to be that the more pressing needs of street widenings, to provide for the growing stream of electric tramways and heavy road traffic, were frequently attended to in a casual manner. It was seldom that sufficient regard was paid to the ultimate development of the centre of the city as a whole. When so much was being done to secure by town planning the proper layout of roads and the allocation of particular areas for industrial and for residential purposes in the outskirts of the towns, and by the schemes for garden cities in the more distant suburbs, it seemed a pity that more thought could not be given to the question of the re-modelling of the centres. It was true that the prohibitive cost would prevent any immediate reconstruction, but the future improvement of the built-on lands was a matter which should be considered and planned well ahead, so that opportunities might be taken as they occurred. Piecemeal improvements should eventually fit in with a complete scheme designed to give some character and dignity to the towns. It was possible that in some towns some means of collaboration between property-owners and the local authorities might be found. Such a method might enable earlier improvements to be made without the expense and irritation of compulsory procedure.

Turning to another point, the speaker said that if the building of new factories was encouraged upon sites newly denuded of dwelling-houses, these new factories would require more labour, and the congestion of the slums remaining would tend to increase. The result of providing new houses at a distance was that only a small proportion of those displaced in the unhealthy area removed to the new houses. The others remained near their former district, and helped to aggravate the overcrowding. It might be true that the new suburban houses, if not occupied by those displaced, were at any rate occupied by others who, vacating houses in the towns, provided room for those less fortunate than themselves. This process, however, was the process which created the slums, the process by which better-class houses, deteriorating in character, gradually passed from the well-being of residences to the level of tenement or lodging-houses.

It was early to say whether general approval could be given to schemes for the erection of tenements of nine or ten stories, but the attempt, if made, should be watched with sympathetic interest. The city of Liverpool had long been in the vanguard of progress in housing matters. Their present proposals, so far as publicity had been given to them, indicated the erection of ten-storied tenements, with electric lifts, and all modern conveniences, with broad streets giving ample light and air. Tenements of this character appeared to solve one of the problems of the slums, that was, to provide living accommodation for all the persons displaced, and to provide that accom-

modation in the same area. In other words, to rehouse all those living in a crowded slum on the same site, in a clean healthy building with plenty of air space. In localities where space was strictly limited, and where it was necessary to house a large population in close proximity to their work, this proposal for lofty tenements seemed to offer the only practical means of solving the problem. It did not, however, seem to him that tenements of nine or ten stories would be desirable or suitable as a general means of solving the problem of the slums. Some progressive towns had already provided three- or four-storied tenement flats, and he hoped to see a greater extension in that direction. Modern well-equipped tenements of three or four stories should include varying types of accommodation from two rooms up to flats of six rooms, and with open spaces or playing fields easily accessible. Such tenements might be profitably erected in the existing slum areas after clearances, particularly if new methods of construction could be devised.

Referring to the Rating and Valuation Bill, the speaker said that under its provisions the overseers, after an existence of 300 years, would disappear, and the rating authorities would be the borough councils, urban district councils, and rural district councils. It was claimed that by this transfer of duties the number of rating authorities would be reduced from 12,882 to 648. The rates in respect of various services would be consolidated into a single general rate. Special rates would continue only in parishes in rural areas where special services had still to be provided. The parish would drop out as a rating unit, and the precepts for county rates would apply to one uniform poundage to the whole of an assessment area. These areas would be county boroughs and areas constituted under schemes prepared by county councils after consultation with rating authorities and other public bodies, and approved by the Minister. Greater uniformity in the distribution of the burden upon ratepayers would, it was contended, be obtained by these means.

Registration.

With regard to registration it would seem at first sight a comparatively simple matter to obtain statutory provision to prevent unqualified persons from practising as surveyors. The profession of a surveyor was one of a highly expert and specialised nature. He was called upon to perform duties which required skilled training and technical education. The welfare and the protection of the general public depended upon the efficient carrying out of those duties. The surveyor had to deal with matters of great public importance, including all the intricate problems attaching to land and property. The management of land and buildings, the public acquisition of land, the rating and assessment of all classes of property, agricultural problems, urban problems, many other questions relating to land acquired for houses, factories, canals, railways, roads, and public works, were all in the hands of surveyors.

They (the Surveyors' Institution) attacked the problem of registration in conjunction with the Auctioneers' and Estate Agents' Institute and the Land Agents' Society. A joint Bill was promoted in Parliament and had met with considerable opposition. The result of the efforts made in Parliament so far were that the Bill was for the time being held up. Members must not suppose that the Institution proposed to drop the question of registration. On the contrary, it was intended to proceed with it, but he would be a rash man who would predict a successful issue within a reasonably short period. He was strongly of opinion that all the members of the Surveyors' Institution should adopt the term "Chartered Surveyor." If that term became generally known and recognised they would go a long way towards attaining the object aimed at in the Registration Bill. They had the right to use the term "Chartered Surveyor" for some thirty years, but had not availed themselves of that right.

NEW MATERIALS FOR HOUSING

IN the course of his Presidential Address to the Institution of Structural Engineers, on November 5, Sir Charles Ruthen referred at some length to the housing problem, which he said still remained one of extraordinary difficulty, for the popular brick had stood the test of time. It was a handy unit, it was the best known and the best liked building material in existence for house building purposes, and given a plentiful supply at a reasonable price, and the skilled labour necessary for its use, work executed by its aid was rapid and cheap, lasting and artistic. Those who laboured in the search of new building methods should begin their investigations and experiments where others left off, and not where others began. Information published by the Ministry of Health upon the subject of the manufacture of concrete blocks and slabs and upon concrete *in situ*; the reports published by the Standardisation Committee 1920 to 1921; the reports issued by the committees upon Special Methods of Building; the various reports issued by the Building Research Department, and the various notes upon special methods which had appeared in the Press, were all of exceeding value and assistance in preventing the same ground of study being covered many times.

Well over a thousand different methods and systems had been submitted for consideration to the various committees appointed by successive Governments during the past few years. They fell within, roughly, 11 distinct categories, as follows:

	No. of Systems.
1. Patent bricks	20
2. Clay lump	11
3. <i>Pise de terre</i> , with various mixtures of gravel, clay, ashes, lime and sand..	15
4. Chalk concrete	4
5. Cob walling	10
6. Timber framing, covered with wood pulp, ply-board, steel, cast iron, asbestos, weather-boarding, bricks, concrete blocks, gunned-concrete, slating, tiling, shingles, gypsum slabs, and various other materials..	41
7. Steel framing, covered with the various materials set out above ..	39
8. Concrete.	
A. Concrete blocks and slabs, made up of cement concrete, cement and sawdust, aerated concrete, &c.	
(a) Hollow or solid blocks the full thickness of the wall	70
(b) Cavity wall with two slabs ..	52
(c) Blocks at intervals the full thickness of the wall to form piers, with panels of two slabs forming cavity	36
(d) Two slabs laid dry with concrete <i>in situ</i> piers or grouted joints..	14
B. Concrete <i>in situ</i> , with or without cavity and with or without reinforcement, erected with the aid of	
(a) Travelling shuttering	6
(b) Permanent shuttering:	
1. Concrete or brick	29
2. Asbestos-cement	16
3. Steel	8
(c) Temporary shuttering with permanent supports of	
1. Brick or pre-cast concrete ..	21
2. Steel or cast iron.. .. .	15
3. Timber, asbestos, &c.	12
(d) Climbing, shuttering of steel, timber, asbestos, &c., secured to temporary steel or iron supports..	32
(e) Similar to (d), but secured to temporary timber supports.. .. .	55
(f) Self-supporting shuttering of steel, iron or other metal with or without bars or uprights to give alignment	49
(g) Self-supporting temporary shuttering otherwise similar to (f)..	88

(h) Large sections of ordinary shuttering, but temporary supports ..	33
(i) Miscellaneous	42
C. Pre-cast reinforced concrete consisting of	
(a) Short columns and slab panels..	7
(b) Skeleton framing and slab panels	33
(c) Large slabs erected by cranes..	34
(d) Various	7
D. Framing used either to carry floors and roofs or merely to give alignment.	
(a) Temporary framing	37
(b) Steel framing	40
(c) Spun or cast concrete framing..	23
(d) Chalk bricks	1
E. Miscellaneous suggestions	44
9. Material, appliances and machines..	32
10. Plaster substitutes	
(a) Wood wool slabs.. .. .	11
(b) Spun concrete slabs	7
(c) Aerated concrete.. .. .	11
(d) Sawdust and cement and various chemicals	30
11. Roof coverings of protected iron in sheets, bitumen and asbestos sheets, concrete tiles, &c.	25

This rather extensive list did not include hundreds of suggestions which did not take any intelligible form.

Whatever might be the system adopted the most economical type of labour was skilled labour. The employment of entirely unskilled labour upon house building work, even if such, for a moment, could be considered a practical proposition, or, indeed, the employment of entirely unskilled labour upon any part of house construction work, had been found, and would continue to be found, unremunerative in the highest degree. Labour must be skilled if economical work was to be produced, and the speed and cheapness of the work produced—to say nothing upon the question of the quality—was measured exactly according to the degree of skill possessed by the labour employed. It was unreasonable to suggest that the strength lacking in these essential skilled ranks could be made up by a wholesale recruitment from the ranks of the entirely unskilled unemployed. Semi-skilled labour, under the direction of highly skilled men, could be used to the greatest advantage in the execution of some of the most approved methods of modern building. It was strange but true that the most inferior class of skilled workers in the building industry, by the introduction of the various forms of concrete construction, had become, in actuality, among the most important workers in this industry. They were now largely responsible for the ultimate strength of the structure, and their highly skilled brother workers were engaged more upon the covering of the essential framework. The one great hindrance to the adoption of concrete, in any form, in construction, was that carelessness, or lack of proper skill in any essential direction, was of serious consequence.

Any new method of house construction which, in its execution, made an excessive demand upon the labour of the bricklaying or plastering arms of the industry, or which in its execution misapplied the labour of these essential craftsmen, was doomed to absolute failure, unless the method proposed enabled the superficial or cubical output of the work of these craftsmen to be considerably increased. The real and urgent need was not to find new methods of cottage building which would supplant the existing well-tried methods, but new methods which, whilst not making a demand upon the already fully-engaged essential skilled arms of the industry, would add to the total number of houses already being produced by normal methods. Or alternatively, new methods which would enable the output of the essential arms of the industry to be augmented.

In the normal brick house the total labour employed, from the first operation to the com-

pletion of the house fit for occupation, was to skilled labour 58 per cent. and as to unskilled labour 42 per cent. In the erection of a concrete house, under the most approved method the labour employed was as to skilled, 42 per cent. and as to unskilled, 58 per cent. term unskilled labour was used in its general accepted sense. In order to realise the application of a satisfactory alternative method of producing the "shell" of a house did not necessarily add to the total number of completed ready for occupation, it should be mentioned that in normal house construction the labour upon the "shell" represented 16.9 per cent. and the materials 29.4 per cent. (exclusive of plastering), or 46.3 per cent. the completed house. The labour and materials in the production of the "shell" was shown in detail in the following statement:—

LABOUR.	per cent.	MATERIALS.	per cent.
Bricklayer ..	6.7	Bricks ..	16.9
Carpenter and joiner ..	2.9	Cement and lime ..	16.9
Slater and tiler ..	.8	Timber in casing ..	16.9
General labourer ..	6.5	Slates and tiles ..	16.9
		Lead ..	16.9
		Light castings ..	16.9
Total ..	46.3		

The average percentage cost of labour and materials in working-class cottages of no construction was set out in the following table:—

LABOUR.	per cent.	MATERIALS.	per cent.
Bricklayer ..	8.9	Bricks ..	39.6
Plasterer ..	3.1	Cement and lime ..	39.6
Carpenter and joiner ..	8.7	Timber in casing ..	39.6
Slater and tiler ..	.8	Timber in joinery ..	39.6
Plumber ..	1.6	Slates and tiles ..	39.6
Painter ..	2.9	Lead ..	39.6
General labourer ..	13.6	Light castings ..	39.6
		Miscellaneous ..	39.6
Total—			39.6
Labour ..	39.6		
Materials ..	60.4		
			100.0

During the past twelve months or so, no a number than 20,000 houses, of various and alternative methods of construction, been erected in various parts of the country and the experience gained as a result had been exceedingly valuable. The question of condensation or "sweating" was one of the difficult to be satisfactorily overcome, and the main, condensation depended more upon the surface of the wall than upon its position. A polished surface was slow to absorb heat from the air, and remained, and consequently was liable to cause condensation. If, in addition, surfaces were painted with cement, so that they could absorb moisture, then the condensation was more noticeable. Rough unpolished masonry might become fairly warm and was absorptive but if polished, the surface remained cold and was less absorbent. Hard plasters were suitable for concrete work, and the coating the interior walls of a house with plain cement-wash was unwise. Theoretically an absorbent surface of a wall did not prevent condensation, but by the absorption of moisture prevented condensation from showing. The external surfaces of concrete wall course, should be non-porous.

Generally speaking, reinforcement was necessary in cottage building, except for the purpose of strengthening certain pre-cast work, or for giving alignment when blocks. If the strength of the structure depended upon the reinforcement, this must be properly protected. In slabs of less than 1½ in. thick, it was difficult to lay reinforced

it was properly protected. Combed, in the use of concrete blocks, and these often led to unequal and all the evils that result therefrom. narrow width blocks complicated joints were than useless; bedding was difficult and more so.

Concrete block work the simpler the block, the nearer to the brick in simplicity—the more satisfactory from all points of view. Concrete block was of such size and shape that it could be bonded with the ordinary mortar was advisable, for there were so many of cottage building where brickwork was satisfactory. The size of the block should be such that the bricklayer or mason could lay it with the left hand, without laying his trowel. The more general use of concrete below the ground level in nearly all cases, large and small, would effect a great saving in the highest skilled labour, and in the valuable cottage building material. There is no doubt that concrete properly used was a reliable substitute for bricks.

ARCHITECTURAL DEVELOPMENTS IN OXFORD

Recent architectural developments in Oxford have evoked both praise and blame. It may be interesting to give some particulars of recent buildings that have been built or completed in Oxford since members of the R.I.B.A. were there a year ago. There have been several new buildings in St. Giles. Pusey House, the headquarters of the Anglo-Catholics in Oxford, has been largely rebuilt, and next door there is a new building that harmonises admirably with its neighbour, erected for the Dominicans. A happy use of old Cotswold tiles for the re-roofing of the new building in the area has helped to preserve the character of this part of Oxford.

There has already been published regarding the buildings of Hertford College. According to some notes made by Mr. E. H. New, M.A., from whom we are indebted for the main facts here, the original of the old structure of Hertford House has been followed, and this is regarded as a good example of an attempt at a thorough "restoration."

Several additions to colleges have been completed. A bay window in Lincoln College has just been renewed under the direction of Herbert Read. The kitchen buildings of Balliol College have been re-faced. The Research Institute of Agricultural Sciences is a modest and pleasing piece of architecture. Magdalen College, however, has just completed a squash racquets court in the new building, the red-tiled roof of which now projects over the "Long Wall."

Recent editorial complained of some of the commercial buildings that have lately been erected in Oxford. These prove that the planning scheme adopted last September is not generally needed if the authorities are to be able to carry out their trust. Before long the Ministry of Health will hold a public inquiry into the scheme. This will present the opportunity to those who welcome such skilful changes to be carried out in St. Giles and in the street, and who regret the lamentable condition of some industrial buildings, to express their point of view in order that the old-world character of the University may not suffer from the new and unsightly improvements.

Nile Contract for British Firm.

A new steel railway bridge across the River Nile is to be built at Dessouk, in the Nile delta, about twenty miles from Alexandria. The bridge is to be a through railway bridge, with cantilever roadway and footways on each side, having a total length of two thousand feet. It is to be built for the Egyptian State Railways by Messrs. Dorman, Long & Co., Ltd., at a cost of £142,000.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—ED.

Internal Finish for Exposed Walls.

[REPLY TO "SUBSCRIBER," OCTOBER 30.]

SIR,—Walls finished in a hard cement surface and painted are very liable to suffer from condensation, except in buildings of sufficient importance to have a reliable heating system to ensure an equable temperature inside the building. If there is a fear of weather penetrating to the inside surface, it is far better to treat the external surface of the wall. There are a number of petrifying liquids on the market that can be relied upon for this purpose. No cement or plaster can be expected to have a long life that is allowed to become more or less permanently damp.

"WATERPROOF."

Height of Adjoining Chimneys.

SIR,—When building on a plot between two existing buildings and to a height greater than that of such buildings, is it obligatory to carry up the adjoining chimneys to a sufficient height above the new roof level? We shall be glad if some correspondent can tell us the legal position in this matter.

W. & D.

Preparation for Coating Plinth of House.

SIR,—Can any of your readers inform me as to the best mixture of tar and pitch, or other ingredients, for coating the brickwork around the base or plinth of a house?

L. H.

X-Ray Proof Material.

SIR,—I am adapting a second-floor room for "X-Ray" work. In order to guard against the penetration of the rays to adjoining rooms on the same floor and on the floors below, I am considering the insertion of a layer of 7 lbs. lead in floor and dividing walls, which, I understand, will be effective. This seems rather a clumsy and costly method, and I should be glad to hear if there is any alternative substance which would have the same effect. What is barium plaster?

"RADIOGRAPHER."

By-law Questions.

[REPLY TO "DURBAN," NOVEMBER 6.]

SIR,—(1) Corrugated iron is a suitable material for the buildings mentioned. (2) Such partitions as described are party walls and should be of brick, stone or concrete. (3) A wall of the height given should be one and a half bricks thick. (4) A small garage cannot be a warehouse; it is a domestic building. (5) You need not put fireproof floors over a small garage.

HENRY LOVEGROVE.

Subsidy Houses.

[REPLY TO "J. L. I.," NOVEMBER 6.]

SIR,—Much depends on the conditions first arranged, as cement flashing is more used than lead flashing in speculative houses. Why did nobody interfere at an earlier stage? It would be difficult to raise the question now.

HENRY LOVEGROVE.

SIR,—Judgment upon the matter referred to lacks precedent, but I should say that the local authority had gone beyond its right in refusing subsidy after having issued a certificate of completion. The usual procedure is the issue of a certificate upon approved plans, subject to adherence to the plans and approved construction; then the issue of a certificate of completion when the building has been approved by the surveyor; and finally the payment on the certificate when the building has been duly occupied. It appears from your correspondent's letter that the first two stages have been completed, and I am of the opinion that, in that case, the local authority has acted *ultra vires*. If, on the contrary, only the preliminary certificate has been issued, the authority is within

its rights in refusing to pass construction that is ruled to be unsound. Your correspondent may be interested to know that in certain L.C.C. houses of recent date there are no lead flashings round chimneys.

"JUSTICE."

Concrete Bricks.

[NOTE ON MR. STEDMAN'S LETTER, NOVEMBER 6.]

SIR,—One or two points in Mr. Stedman's letter may be misleading. Hand tamping depends so much upon the "tamper" that, however fortunate may have been the experience of your correspondent, the more usually successful results will follow the use of a good block-making machine, where uniformity is ensured in the output. That this uniformity is one of excellence depends entirely upon the composition of the concrete, and I have found from personal experience that the inclusion of a proportion of breeze or ashes in the aggregate, say, two of breeze, four of ballast, and one of cement, makes for just that degree of absorption that gives brickwork the right consistency to resist weather from without, and condensation from within.

"USER."

Size of Radiators.

[REPLY TO "A COMFORT," NOVEMBER 6.]

SIR,—Your correspondent must give further particulars before reliable advice can be given. It is necessary to know the window area through which the main loss of heat will take place, the position and level of the boiler, and the size of gas fire proposed to be installed.

Circular-headed Door Frames.

SIR,—The accompanying illustration shows a method adopted by me for jointing wood circular-

headed solid door frames. Is this the recognised practice? If not, perhaps your readers would advise me.

"QUERIST."

Responsibility for Drainage Work.

SIR,—A client of mine is living in a house which has had a cess-pit. The estate has just completed the sewer at the back of his premises and he has had notice to connect up to same. I had the contract, but found after opening up from inspection chamber to sewer I could not get sufficient fall. I also found that all the refuse had been running to a surface-water drain in front of house and not to his cess-pit. This service water drain has since been connected to main sewer. The sanitary authorities now want my client to open up in front, find drain pipes, and build two inspection chambers, which he refuses to do unless they pay for the expense already incurred at the back. The sanitary inspector says I should be the loser because I should have found out if there was sufficient fall to the sewer before going too far, which in any case would have necessitated my opening up over the sewer to get at the sewer culvert to take levels. I maintain they should have been satisfied that there was sufficient fall before giving my client notice to connect. Am I right?

"DRAINS."

Inquiries on the following subjects have been answered direct:—Metal Letters for Signs; Geyser and Boiler; Building Blocks; Illustrations of Houses of rental value of £80; Pantiles; Legal, Yorks.

Information Wanted.—We should be obliged if any reader could give us information with regard to the following:—(1) Doric Concrete Curb; (2) Hydrome Water Paint; (3) Lapsoidal, a store material.

THE BUILDING TRADE.

THE NEW PUBLIC HEALTH ACT, 1925—II

PART II.—STREETS AND BUILDINGS.

THIS part of the Act is adoptive, but where powers are conferred upon a county council by any section in this Part, those powers may be exercised by the council without an adoption by them of the provisions of that section. (See section 2, subsection (2), and our note thereon supra.)

It is not necessary for us to refer to section 13 (Street bins), section 14 (Drinking fountains, seats, &c., in streets), section 15 (Fire alarms), section 16 (which defines certain areas in which the foregoing powers may not be exercised without the consent of the county council or certain statutory undertakers), and sections 17-19 inclusive (which relate to the naming of streets).

Drainage of Courts, &c.

Section 20, subsection (1), after citing section 25 of the Public Health Act (Amendment) Act, 1907, which provides for the execution of works for the effectual drainage of the subsoil or surface of a yard in connection with and exclusively belonging to a dwelling house, provides that it shall extend to "any court, yard, or passage (not being a highway repairable by the inhabitants at large), which is used in common by the occupiers of two or more dwelling houses, whether such dwelling houses belong to the same or different owners."

Subsection (2) provides that where "under the said section, as extended by this section, the local authority have executed works as above on default of the owners of dwelling houses, and the dwelling houses belong to different owners, the expenses incurred by the local authority in the execution of the works shall be apportioned between the owners in such shares as may be determined by the surveyor or (in case of dispute) by a court of summary jurisdiction, and in default of payment, any share so apportioned may be recovered summarily as a civil debt from the owner on whom it is apportioned."

Subsection (3) provides "upon the commencement of this section" (that is, when the adoption comes into force, see ante section 1 subsection (4), any by-laws made by the local authority under section 23 of the Public Health Acts (Amendment) Act, 1890, with respect to the paving of yards and open spaces, in connection with dwelling houses, shall cease to have effect in any area where this section comes into force. The memorandum of the Ministry has an important note on this section. It points out that the section contemplates that section 25 of the Act of 1907 will be in force in an area before the new section is adopted; therefore if the local authority proposes to adopt the new section an application should be made for an order of the Minister putting section 25 of the Act of 1907 in force.

Section 21 relates to the "Prevention of water flowing on foot paths," and enables the urban authority to call upon the owner of any premises abutting on a street in an urban area to "execute and thereafter maintain such down-pipes, channels, or gutters, as may be necessary to prevent, so far as is reasonably practicable, surface water from the premises flowing on to or over the footpath of the street under penalty, and the provisions of this section are in addition to the provisions of section 74 of the Towns Improvement Clauses Act, 1847."

It will be remembered that this section can only be adopted by urban authorities without the consent of the Minister where the population exceeds 20,000, and it cannot be adopted by rural district councils, and the same observation applies to the following section, 22, which enables the urban authority to give notice to the owner or occupier of any lands abutting upon any street within their district which is repairable by the inhabitants at large to take

steps (under penalty) to prevent soil or refuse falling upon or washing into the street or any sewer or gully therein in such quantities as will obstruct the highway or choke up the sewer or gully.

Obstruction to Persons Using Streets.

Sections 23 to 26 inclusive are grouped under the above heading. Section 23 provides that where any tree, hedge, or shrub, overhangs any street or footpath, "so as to obstruct or interfere with the light from any public lamp or to endanger or obstruct the passage of vehicles or foot passengers or to obstruct the view of drivers of vehicles," the owner of the tree, hedge or shrub or the occupier of the premises may be served with notice to lop or cut and in default the local authority may do so and may recover the cost summarily from the owner or occupier. In the case of main roads maintained by a County Council the powers conferred by this section are to be exercised by the County Council (subsection (2)).

There is an appeal against an order made under this section to a court of petty sessions, and the procedure on appeal is laid down in Section 8 of the Act. The Memorandum of the Minister draws attention to the various Acts dealing with this question. Under Section 65 of the Highway Act, 1835, highway authorities are empowered to apply to the justices for an order for the removal, pruning, &c., of hedges and trees which obstruct traffic or prejudice the roadway by their shade. There is a penalty attached to this section and in default the expenses of doing the necessary operations can be recovered as against the owner by distress.

Section 4 of the Roads Improvement Act, 1925, which came into force August 7 last, enables the highway authority to deal with trees, hedges and obstructions at or near any corner or bend which interfere with the view of persons using the highway whether the trees overhang or not, but the highway authority have to bear the expenses and compensate the owner. Under Section 23 of the Public Health Act, 1925, no application to justices is necessary, but the trees, shrubs, &c., must overhang the street or footpath.

Projections over Streets.

Section 24 cannot be adopted by a rural district Council; it provides that "any projection erected or placed against or in front of any house or building which by reason of being insecurely fixed or of defective construction or otherwise is a source of danger to persons lawfully using a street shall under Sections 69 and 70 of the Towns Improvement Clauses Act, 1847, as incorporated with the Public Health Act, 1875, be deemed to be an obstruction and those sections including the penal provisions shall apply."

Section 69 of the Towns Improvement Clauses Act, 1847, as amended by Section 160 of the Public Health Act, 1875, particularised a great many things which were to be deemed obstructions, porches, sheds, windows, &c., &c., these particularised obstructions were followed by the general words "or any other obstruction or projection." We gather from the Memorandum that owing to this particularity there was reason to think that the general words might have no effect, according to the rule of construction that general words must be applied as only embracing things *ejusdem generis* with those specified, and this section is therefore drawn in general terms "any projection;" but there is a further distinction between the two sections, for Section 69 implies that the projection must be "an obstruction to the safe and convenient passage along any street," whereas this new section also provides against the projection

being "a source of danger by reason of being insecurely fixed or faulty in construction."

Section 25 renders it unlawful "under authority to fix or place any overhead beam, pipe, cable, wire or other similar apparatus, over, along or across any street, but this does not apply to statutory undertakers defined in Section 7, subsection (3). Upon commencement of this section Part II of the Public Health Acts (Amendment) Act, shall cease to have effect in any area in which this section is put in force but any by-laws by the local authority under that part of the Act shall nevertheless remain in force revoked by resolution of the local authority."

In some districts we could name where it is the local authorities themselves who are the chief offenders in placing a network of head wires over the streets in connection with their electric lighting undertakings.

Section 26 enables the local authority to make by-laws for the prevention of danger or obstruction to persons using any street or place, which latter expression includes any public park or garden, or any place to which the public have or are permitted access, apparatus such as posts, wires, &c., used for wireless telegraphy or telephony stretched placed over any premises and liable to fall on any street or public place. This section does not apply to statutory undertakers.

It is unnecessary for us to notice Section 27 which requires a licence to be granted, without payment except legal or other expenses, for carrying bridges over streets, and Section 28 which relates to bridges designed to carry streetcars, and we pass to the sections relating to

New Streets.

Section 29 merely enacts that a street which has been deemed a new street for the purpose of the application of any by-laws of the local authority with respect to new streets, or of any provision of a local Act with respect to the width of streets notwithstanding that it is a continuation of an existing street, but Section 30 is more drastic and appears to raise considerable difficulties.

Section 30 subsection (1) is as follows: "Where it appears to the local authority that the whole or any portion of an existing highway will be converted into a new street as a consequence of building operations which have been or are likely to be, undertaken in the vicinity of the local authority may by order declare that highway or such portion thereof as may be specified in the order, a new street for the purposes of the application thereto of their by-laws with respect to new streets or of any provision of a local Act with respect to the width of streets." Subsection (2) provides for a notice being posted in the street or part of the street affected not less than one month before making an order.

Subsection (3) provides that such an order shall state that an appeal to quarter sessions will lie under this Act against the order by any person aggrieved. (As to the appeal, see Section 7 of the Public Health Acts (Amendment) Act, 1907, as applied by Section 70 of the Act.)

Subsection 4 enacts that upon an order made under this section coming into force any person shall commence to erect a new building abutting on or adjoining the highway, or portion of a highway, by the order declared to be a new street shall in relation to that land be deemed to be laying out a new street within the meaning of the by-laws of the local authority with respect to new streets or of any provision in a local Act with respect to the width of streets. Subsection (5) excepts buildings (other than dwelling houses) erected by railway companies or by the owners of docks, canals, &c.

The Memorandum of the Ministry states that this section is aimed at a difficulty illustrated by the cases of Devon Port Corporation v. The

3, 1 Ch. 759) and Attorney General v. Dorin 2, 1 Ch. 369; *The Builder*, December 8, 1925.

With reference to these cases and this section, certain questions, however, arise, and we venture the following observations:

New streets may be created in two ways, a new street may have been laid out on private land, thus becoming a "new street" in the primary sense of the words (Attorney General v. Barton, 1909, 2 Ch. 265; *The Builder*, September 1909), or an existing highway which had long been a "street" within the interpretation of section (4) of the Public Health Act, 1875, may, by the erection of houses abutting upon it, become a street in the popular sense of the term (Attorney General v. Barton, Eccles Local Board, 3, 8 App. Case 798).

In the two cases cited in the Memorandum referred to the latter of the two classes of private streets, and the Court had to consider the question of fact whether the building operations constituted a laying-out of a new street within the meaning of the by-laws made under section 157 of the Public Health Act, 1875. It was held in those cases that there must be something in the nature of a physical laying-out as distinguished from a mere metaphorical laying out.

In *Devonport Corporation v. Tozer*, the defendants, owners of a triangular site abutting on two sides on public highways, were erecting buildings upon this site fronting the highways, and the Corporation contended that they were laying out a new street which did not comply with their by-laws as to the width of the streets. The Court held that the facts were not sufficient to justify the inference that the defendants were laying out the highways as new streets.

In *Attorney General v. Dorin*, the defendant was the owner of land abutting upon a highway in an urban district and separated from the highway by an ancient hedge, and he erected tenements with their backs to the road and a strip of land, 16 ft. in width, between the backs of the houses and the hedge. He inserted gates in the hedge giving access to the backs of the houses from the road, and he drained the houses by a sewer which he had constructed in the strip, but it was held that he had done did not constitute a physical laying-out of the road as a new street.

It seems clear that when once an order has been made, declaring a highway or part of a highway to be a new street under section 1, subsection (1), then subsection (4) would prevent objections such as those raised in the above cases from being raised, as the position would be very much the same as it is where a new street has been made for the first time. But by subsection (3) an appeal is given apparently against the making of the order, although the section is not very clearly worded as regards this point. The words of the subsection are: "Where such notice" (that is, the notice to be posted in the street affected by the intended order) "shall contain a statement that the intended order may be made by the local authority on or at any time after the date named in the notice, and that an appeal to quarter sessions will lie under this Act against the order in the instance of any person aggrieved." Presumably, therefore, on an appeal to quarter sessions against the order, the same questions arise as in the above cases as to whether building operations will convert the highway into a new street.

This is largely a question of fact, and therefore the appellate courts only considered whether there was evidence to support the finding, but the question of fact under this section may be complicated, for the court will have to consider not only whether building operations have commenced or immediately contemplated will convert the highway into a new street, but the effect of building operations may be undertaken; or it may possibly be that the only question which can be asked will be whether there was evidence to show the local authority in considering that the operations undertaken or likely to be undertaken would convert the highway into a new street. This section is sure to be the cause of litigation. When once the order is in force,

it would appear the only question which could be raised under subsection (4) would be whether the building was upon land "abutting on or adjoining the highway."

Section 31 enacts "Whenever application shall be made to the local authority to approve the plans of a new street, in pursuance of any by-law or enactment requiring a plan to be submitted to the local authority, and such new street in the opinion of the authority will form (a) a main thoroughfare or a continuance of a main thoroughfare, or means of communication between main thoroughfares in their district; or (b) a continuation of a main approach or means of communication between main approaches to their district, the local authority may, as a condition of their approval, require that the new street shall be formed of such width as they may determine, "Provided that if such width exceeds by more than 20 ft. the maximum width prescribed for a new street by any by-law or enactment with respect to the width of new streets which may be in force in the area, the local authority shall make compensation for any loss or damage which may be sustained by reason of the street being required to be a width greater than 20 ft. in excess of such maximum width."

By subsection (2) the amount of such compensation shall, in default of agreement be determined by arbitration under the Acquisition of Land (Assessment Compensation) Act, but the subsection contains a "betterment clause," any benefit accruing to the claimant from the street widening is to be taken into consideration in estimating the compensation.

The "loss or damage" here mentioned is distinct from extra expense incurred by reason of the additional width required, for subsection (3) enacts that nothing in this section shall empower the local authority to require any person "to defray any greater expense in the execution of any street works than would have been payable if the street had been of no greater width than the maximum prescribed by any by-law or enactment."

The additional expense incurred in the execution of street works by reason of the greater width shall be certified by the surveyor, or, in case of dispute, be determined by a petty sessionsal court.

It will be observed that "loss or damage" can only be claimed where the width prescribed exceeds the maximum by 20 ft.; but the extra cost can be claimed on any excess over the maximum width as prescribed by by-law or enactment. By subsection (4) the local authority shall determine the proportion of the width to be laid out as carriageway or footways.

Section 32 contains what the Memorandum terms "a concession to building owners." Subsection (1) provides that where an owner proposes to lay out a new street upon land which adjoins or abuts on an existing highway and buildings, have been or are about to be erected on one side only of that highway, the local authority in any case in which they are empowered to require such owner or widen the existing highway to the width prescribed for a new street by any by-law or enactment, which in this section is called "the prescribed width," may by order permit such owner to widen the highway to such less width as may be prescribed in the order, so, however, that the distance between the centre line of the existing highway and the boundary (as extended) on the side adjoining the land of such owner shall not be less than one-half of the prescribed width.

By subsection (2) an appeal shall not lie to quarter sessions against the withholding or refusal by the local authority of such an order.

By subsection (3) not less than twenty-one days before the making of such an order, notice of the proposed order shall be sent both to the owner of the land to which the order will relate and to the owner of land which adjoins or abuts on the other side of the highway opposite the land to which the order will relate.

By subsection (4), when the owner on the opposite side commences to build, he shall under penalty complete the widening of the existing highway, but this subsection shall not impose

on any such owner an obligation to put down any building erected before the date of the order made under this section. It seems not clear whether this section can be applied where, under section 30, the local authority has, by order, declared a highway or any portion of it to be a new street. It is to be observed that under section 30, subsection (4), when such an order has come into operation, any person who shall commence to build or erect a new building upon land abutting on or adjoining the highway, "shall in relation to that land be deemed to be laying out a new street within the meaning of the by-laws," &c. The question is—Do the words at the commencement of section 32, "Where an owner proposes to lay out a new street . . ." apply to section 30, subsection (4)? It would seem a case of hardship if a person erecting a single house on a highway, which, under section 30 had by order been declared a new street, were liable to give the land for the new street for the full width and not merely set back his building, and presumably the two sections may be read together. But, in any case, the order under section 32 is discretionary in the local authority, and its withholding is not the subject of appeal, so section 30 may hardly operate. This is shown by the Memorandum which, in reference to section 32 states, "Where a building owner is developing land on one side only of an existing road or footpath, in such a way that he can be held to be laying out a new street, the by-laws of the local authority would usually require him to surrender the land necessary to widen the existing road or footpath to the full by-law width. Section 32 enables the local authority to grant a concession to building owners in such cases if the road or footpath is an existing highway." It is to be noted that section 30 applies only in cases where there is an existing highway, so to this extent the Memorandum supports the view we have expressed that the provisions of section 32 can be applied to section 30.

It would certainly appear desirable that in every case where an existing road is declared to be a new street the land added to the highway should be taken where possible from both sides, not only in the interests of the owners of the land abutting upon it, but also to maintain the line of the street. It sometimes appears to us that the Legislature when it is intent upon one scheme, such as street and road improvements, forgets the effect it may have on other schemes. Thus some of the sections we have been noticing impose a burden on a building owner "laying out a new street," but the technical meaning given to those words does not apply them to a building owner constructing a street as part of his building scheme, but to anyone building a house abutting upon an existing road. It is clear that if such a building owner has to give the land required for widening an existing roadway to its whole width, that is not an encouragement to building, but a distinct deterrent, and in any case it must add to the cost of the building, and where it is intended to erect buildings which may be let to persons of small means add to the rents.

Street Improvements.

Section 33 introduces the power to prescribe what is called an "Improvement Line," which is to be distinguished from the "building line" prescribed in section 3 of the Roads Improvement Act, 1925, which came into force August 7. The section is a very long one, and we can only outline its provisions.

Subsection (1) provides, "Where in the opinion of the local authority (a) any street reparable by the inhabitants at large is narrow or inconvenient or without any sufficiently regular boundary line, or (b) it is necessary or desirable that such street shall be widened, the local authority may prescribe in relation to either side of the street, or at or within a distance of fifteen yards from any street corner the line to which the street shall be widened."

By subsection (2), this line shall be shown on "an improvement plan" to be deposited at the offices of the local authority and open to inspection free of charge for one month. By

subsection (3) notice in writing is to be given to every owner and occupier interested.

By subsection (4) the local authority shall consider any objection made to the proposed improvement line (but apparently no right of appeal is given), and not less than six weeks after the date on which notice was given to the owners and occupiers the authorities may by resolution prescribe the improvement line.

By subsection (5) when the improvement line has been prescribed no new building, erection or excavation shall be placed nearer to the centre line of the street than the improvement line without consent of the local authority, but the foregoing prohibition does not apply to statutory undertakers in connection with their pipes and apparatus.

By subsection (6) any person whose property is injuriously affected shall be entitled to compensation from the local authority, but no compensation can be claimed in respect of a building erected or contract made after "the date of the deposit of the improvement plan."

By subsection 7 the compensation shall be assessed under the Acquisition of Land (Assessment of Compensation) Act, 1919, but the arbitrator may take into account and embody in his award any undertaking in relation to the property affected offered by the local authority, and it is to be noticed that under subsection 10 "betterment" is to be taken into consideration.

By subsection (8) the local authority may purchase any land not occupied by buildings between the improvement line and the boundary and the provisions of the Land Clauses Acts, including the provisions with respect to the purchase and taking of lands otherwise than by agreement except sections 92 and 123 of the Act of 1945, shall apply. Here, again, the betterment provision contained in subsection (10) applies.

Subsection (9) provides that until the land so purchased has been added to the street the occupier of the land from which it is severed and other persons with his permission shall be entitled to reasonable access across the land to the street, and shall have the same rights in regard to laying, altering, repairing, drains, mains, pipes and electric lines in such land as if it were part of the street.

Subsection (12) imposes penalties where, after the improvement line has been prescribed, any person offends against the provisions of the section.

Subsection (13) saves the rights of certain undertakers such as railway companies, docks, &c.

Section 34 must be read with the above section, for as regards main roads maintained by county councils the above powers are vested in the county council, but after consultation with the district council.

Private Street Works.

Section 35 is merely directed to altering the effect of the decision in the case *Robertson v. Bristol Corporation* (1900, 2 Q.B. 198). In that case it was held that a local authority exercising powers under section 150 of the Public Health Act, 1875, as regards paving and making-up streets had no power to alter the respective widths of the carriageway and footpaths. Section 35, which is one of the sections which cannot be adopted by rural councils removes this disability from urban councils both under the Public Health Act and the Private Street Works Act, 1892, but by a proviso to this section it is enacted that no greater charge shall be imposed on a frontager by reason of such variation "than could have been imposed in respect of a carriageway or footway of the width prescribed for a new street of the same class by any by-law or enactment with respect to the width of new streets which applied to the street when it was laid out, and any sum in excess shall be borne by the urban authority."

This section is the last in Part II, but it seems convenient here to mention the following sections which appear in Part VIII as they bear on this question of making up streets.

Section 81 is directed to bringing section 150 of the Public Health Act, 1875, and any local

Act which contains provisions relating to street works into line with section 15 of the Private Street Works Act, 1892. This latter is an adoptive Act, but it contains powers which enable the local authority to contribute the whole or any portion of the expenses of works. This power is, therefore, now exercisable under section 150 of the Public Health Act, or a local Act. Section 82 similarly imports into section 150 of the Public Health Act, 1875, a provision found in section 20 of the Private Street Works Act, 1892, that where notices have been given by the urban authority as to paving and making-up of a private street and such work has been done to the satisfaction of the urban authority, then on application of the greater part in rateable value of the owners of land or houses in such street the authority shall declare the same to be a highway reparable by the inhabitants at large. This section applies only to urban districts.

The Memorandum of the Ministry explains in reference to section 81 that local authorities in some districts act neither under the Public Health Act nor the Private Street Works Act, but under local Acts in executing street works, and that the object of that section is to confer the powers of deciding the respective width of the roadway and footpaths under any of the above statutes. That being the case, we cannot see why the provisions of section 82 were not also extended to local Acts, as when the street has been made-up at the frontagers' expense those frontagers should have the same right of demanding that the street shall be declared a highway reparable by the inhabitants at large, whether the works were done under the above public Acts or under a local Act.

THE PENALTY OF AGE

SIR,—Your correspondent's query, "Why?" is echoed by other middle-aged, healthy, active surveyors' and builders' assistants. Employers who interview applicants do not consider themselves "too old at 40," 50, 60, or even older, to "carry on." Why? Many assistants served in the war, have been hard hit by loss of employment, loss of savings put by for old age, and now, it seems, are not given a fair chance. Why?

Another handicap is that an applicant is required in some positions to have P.A.S.I. or other degree to his name. Why? This was not made a condition in the past. Many capable men, for various reasons, did not sit for exams. in their younger days.

Advertisers require applicants to state age and salary required. Why? If age is mentioned, it is hopeless to expect a reply. Salary required may be considered too much; or, on the other hand, if a moderate one is asked, the applicant may not be considered suitable. Why should not a statement of qualifications be sufficient for the advertisers to select applicants for interview, and thus provide an opportunity for mutually arranging salary according to circumstances? Is it possible, through the medium of your journal, to have the views of employers on the oft-repeated question

"Why?"

BUILDING AND ENGINEERING CONTRACTS.

Arbitration in Building Disputes.

A course of ten lectures on these subjects is being given at the Westminster Technical Institute by Captain W. T. Creswell, Barrister-at-Law, on Tuesday evenings from 7 to 9 p.m. Special attention will be devoted to questions involved in housing work. The course will be based on the following syllabus: The nature of contracts generally; forms in which a contract may originate; the tender; the acceptance of the tender; the consideration; the contract; mistakes; fraud; misrepresentation; supervision of work; time of completion; omissions and variations; defects; certificates and retention money; penalties and liquidated damages; discharge of contracts by performance and otherwise; breach of contract; damage to persons, property or things; and arbitration in building disputes.

BOOK REVIEWS

Modern Building Practice. By WILL HARVEY. (London: 9, Queen Anne Gate, Westminster, S.W.1.) 1925. Pp. 5s.

This is a handy little volume which deals with those matters of building practice which every architect ought to know—generally small matters, but if carried out would add considerably to the satisfaction of clients and lessen that tendency to criticism which we are afraid is too often justified, more particularly in the case of small houses. The book is well illustrated, and a perusal of it will probably be a useful reminder of those small matters that to make a perfect whole.

Cellulose Ester Varnishes. By F. SPROXTON. B.Sc., F.I.C.

Blacks and Pitches. By H. M. LANGTON, M.B.Sc., A.I.C.

We have received a copy of these books, which are two of a series of monographs on important branches of the oil and colour industries. They are written by specialists who possess fact, experience and adequate chemical knowledge. A critical digest of the published literature, a feature of the series, and descriptions of typical manufacturing processes are included. Special reference is made to allied industries. The books are well illustrated with photographs, diagrams of plant, photomicrographs, and other pictorial expressions calculated to enable a reader the better to understand the

A Short History of the Building Crafts. By MARTIN SHAW BRIGGS, F.R.I.B.A. (London: Clarendon Press.)

The author of this work, which is based on a series of lectures to architectural students at the University College, which subsequently appeared in our pages, has approached his subject with erudition. His treatise is written with old-time methods of construction in their relation to the buildings of the past. There is an introductory chapter dealing with the architect and the craftsman, followed by ten chapters describing the various trades and handicrafts. The author writes from a disinterested point of view, his aim being to make known the honesty of purpose which was the stimulus to the workers of old days, and the book is wide in its range, touching on building construction of nearly every civilisation.

A good deal of the theory described by the author has been revived by architects during recent years, particularly in the realm of domestic building, but there is much so stated in the arguments put forth, and 250 illustrations by the author will be of service to students. We would wish, however, that the author had connected his chapters more closely to the story of English building, particularly the way in which certain treatments of stone, brick, and timber resulted from the development of the plan in a vertical direction. The book is well written, and shows careful research, not only in libraries but among old buildings which are recognised as examples of sound building. The publication of the work is a step in the right direction, and its lessons will doubtless be incorporated in the teaching systems of the schools.

ATHOLL STEEL HOUSES

The Minister of Health has authorised 25 pairs of demonstration Atholl houses to be built in many parts of England. A pair of these houses have just been completed on the L.C.C. housing estate at Downham, and were opened recently by the Duke of Atholl, who designed them. In external appearance they are neat and well-proportioned, the steel stanchions painted black and the enclosed plates white. The roof tiles are red. The lay-out of the plan is economical, every square-inch being advantageously used. These two houses contain three rooms each and, on the ground floor, a living-room, kitchen, bathroom, larder, coal-cellar, &c., but this accommodation and the arrangements can be varied in a number of ways by using the standard units all the time.

The speed with which these houses can be built, however, is their greatest asset, the time taken from two to four weeks, although the plates of the walls in a pair can be assembled within four days if necessary. One of our illustrations shows three days' work.

The outer walls are constructed of 3-16 in. plates flanged and curved at the top edge, thus providing a waterproof joint, adding to the structural strength and serving to carry the supports which the lining of the wall is fixed. These plates are coated with granulated cork on the outside face to absorb condensation. The inner lining is composed of asbestos sheeting backed with wood for strength and warmth. The 3 in. space between the steel and this inner lining serves to insulate the wall.

The cost is £450, but this will be reduced by mass production. Arrangements have been made at the Poplar works for the fabrication of the steelwork at the rate of 2,500 houses per year, although the firm, the Housing Corporation of Great Britain, Ltd., expect to build at least 10,000 houses next year. We understand that the L.C.C. has placed a substantial order for these houses, and that the relations with Labour are entirely friendly. Under union conditions are observed, and as the scheme does not unduly draw upon the trades in which a shortage of labour exists (bricklaying and plastering are eliminated) no difficulties are anticipated.

Excavations at Athens.

The excavations round the Acropolis are expected to begin next March. The American Committee has accepted the plan prepared by Ephor of Antiquities of Attica, in collaboration with the Director of the American School at Athens. The excavations are to be at the spot where the electric railway crosses the archaeological site in front of the section bridge, and will extend towards the Propaganda and the Acropolis.

TRADE NEWS

We have received a booklet from Sir William Arrol & Co. (Swansea), Ltd., describing their new structural works at King's Dock, Swansea.

Cements and their Properties.

We have received a booklet dealing with certain cements and their properties—"a critical consideration"—by Mr. J. F. Goddard, and published by Super Cement, Ltd., of 10, Upper Woburn-place, W.C.1. This abstract commences with a brief summary of the invention, the first use and the progress of cement; every aspect of the preparation is fully dealt with. Super cement is made from Portland cement clinker, and is improved by adding to this a material known as Catacoll during the grinding operation. This is a chemically treated gypsum and is substituted for an approximately equal amount of the raw gypsum ordinarily added to the clinker at the same stage in the manufacturing process of Portland cement. The essential ingredient of Catacoll is tannic acid, and its function is to facilitate the reactions which occur between the mixing water and the constituents of the clinker, and ensure that they will be complete; this makes it thoroughly waterproof. Those interested can obtain this booklet on application to the above address.

Structural Steelwork.

The surest testimonial to the quality of any goods is the length of time for which the firm has produced them. Messrs. Fredk. Braby & Co., Ltd., Petershill-road, Glasgow, have been manufacturing structural steelwork for half a century. In giving a general description of their work they believe that actual photographs serve as a better medium than letter-press, and have collected in their latest brochure a variety of illustrations of recent work, indicating the character of the work they do. They state that they have a large and experienced staff of designers, engineers, and craftsmen, and great care is taken with export work, to ensure proper marking so that the structures can be put together with unskilled labour. An innovation upon which Messrs. Braby & Co. are to be congratulated is their scheme of "Standard-unit" construction: structural steelwork, ready-made in interchangeable standard parts, which are assembled in various ways to suit various requirements, chief among which is that of roof framework. The advantages of this system are summed up in a phrase: "Steelwork from stock." This means immediate design and immediate supply; interchangeability; standardisation and simplicity; adaptability to varying circumstances; readiness in all cases for immediate erection, extension, duplication or alteration; and for re-erection without loss.

Sash Chains.

We have received a leaflet from Messrs. Rhodes' Chains, Ltd., of 26, Charing Cross-road, W.C.2, dealing with the Improved Nos. 44 and 33s Chains. Though these are light in weight, increased efficiency in manufacture, combined with the selection of only the best materials, has enabled the firm to produce strong and serviceable chains at low cost; while their usefulness has been greatly increased by the fact that no elaborate fittings are required for fitting them to sashes and weights. They are claimed to be silent and easy running, and never to require attention, thus obviating any interference with the decoration. The inconvenience and cost of repairing broken sash lines is eliminated and all damage to person and property avoided.

NEW COMPANIES

The particulars quoted below have been compiled by Messrs. Jordan & Sons, Ltd., Company Registration Agents, of 116 and 118, Chancery-lane, W.C.2, from the documents available at the Companies' Registry.

BURTON HOLT (CHELSEA), LTD. (209,066), Registered October 17. 1-3A, Church-street, Chelsea, S.W.3. Manufacturers of pre-cast concrete units and concrete "in situ," repairers of alabaster, &c. Nominal capital, £500.

SOUTREND MASTER BUILDERS' HOUSING CO., LTD. (209,071). Registered builders and contractors, &c. Nominal capital, £4,000.

CILCEN LIME SPAR CO., LTD. (209,037). Registered October 10. Quarry owners, quarry-masters, &c. Nominal capital, £3,000.

R. L. DILWORTH, LTD. (209,045). Registered October 16. Builders and contractors. Nominal capital, £5,000.

J. B. BROOKE & SONS, LTD. (209,081). Registered October 17. Joiners, builders, &c. Nominal capital, £3,000.

AERATED CONCRETE CO., LTD. (208,597). Registered September 21. 97-8, Abbey House, Victoria-street, Westminster, S.W.1. Manufacturers of and dealers in cement, lime, plasters, whiting, clay, &c. Nominal capital, £500.

G. & T. EARLE (1925), LTD. (208,738). Registered October 1. Wilmington, Hull. Manufacturers of and dealers in cement, lime, plasters, artificial stone, &c. Nominal capital, £10,000.

FRANCIS A. TINKER & SONS, LTD. (208,737). Registered October 1. Painting contractors and decorators. Nominal capital, £5,000.

ALDERSHOT BUILDING CO., LTD. (209,407). Registered November 3. "Ashleworth," North-lane, Aldershot. Builders and general contractors, &c. Nominal capital, £1,000.

C. PHIPPS & CO., LTD. (209,331). Registered October 30. Builders and decorators, &c. Nominal capital, £750.

THORNE & THORNE, LTD. (209,345). Registered October 30. 37, Westwell-road, Streatham, S.W.16. Builders and contractors, &c. Nominal capital, £5,000.

An Atholl Steel House as erected on the L.C.C. Housing Estate at Downham.

NEW BUILDINGS IN LONDON.

Aldersgate-street.—Plans have been prepared by Mr. F. Selby, architect, 44, Chancery-lane, W.C.2, for a block of office premises.

Artillery-row.—Large additional showrooms and staff quarters are being erected fronting on to Artillery-row and Spencer-place, S.W.1, linking up with the main stores building of the Army and Navy Co-operative Stores, Ltd., in Victoria-street, S.W.1. Messrs. Dove Bros., Ltd., Cloudesley-place, Islington, contractors. Sir Aston Webb & Son, Queen Anne's Gate, S.W.1, architects.

Ashted.—New factory buildings are being erected and existing premises adapted for the manufacture of artificial silk for the Rayon Manufacturing Co., Ltd., 62, New Broad-street, E.C.2. Messrs. Frank Hayes, Ltd., Kingsway House, Kingsway, W.C., and Messrs. George E. Everitt & Sons, Ltd., Sydenham-road, North Croydon, contractors. Mr. H. L. Cabuche, O.B.E., F.R.I.B.A., is supervising the work.

Balderton-street.—Foundations have been constructed for the garage—holding 350 cars—repair works and petrol service station which are being erected by Messrs. Bovis, Ltd., 43, Upper Berkeley-street, W.1. Plans by Messrs. Edmund Wimperis, Simpson & Guthrie, F.F.R.I.B.A., 61, South Molton-street, W.1, acting on behalf of Messrs. Macy's, Ltd., garage proprietors.

Bermondsey.—The L.C.C. have under consideration in connection with the rebuilding of the slum area known as "Hickman's Folly," a proposal to pull down and re-erect the "George" public-house in Flockton-street. Mr. Kirby is architect to Messrs. Courage & Co., Ltd., the brewers, owners of the property.

Bond-street.—As soon as operations upon escalators, &c., at the Bond-street Underground Station are completed it is proposed to convert the ground floor of the superstructure into a shopping arcade, to plans prepared by Mr. Stanley A. Heaps, architect to the "Underground" Co., Electric Railway House, Broad-way, S.W.1.

Brentford.—Funds are being raised to build a new Cottage Hospital for the district. Plans by Messrs. Dodge & Reid, 120, High-street, Brentford.

Bromley.—The T.C. propose to build a new school on the Downham housing estate to accommodate 1,000 children. Plans by Mr. Herbert O. Ellis, F.R.I.B.A. (Messrs. H. O. Ellis & Clarke), 3, Old Queen-street, Westminster, S.W.1.

Church-street.—Messrs. N. A. Cooper & Co., builders, 47, Earl's Court-road, W.8, are to build a block of self-contained flats of six stories, on a site at Nos. 26-28, Church-street, W.8. Shops will occupy the ground floor frontage.

Croydon.—Plans for a new secondary school on a site in Shirley-road are to be prepared by Mr. H. Carter Pegg, F.R.I.B.A., 35, Parliament-street, Westminster, S.W., for the Croydon E.C.

Croydon.—Extensions are to be carried out to the electricity works in Factory-lane, for the Borough Council. Messrs. Peter Lind & Co., 2, Central Buildings, Westminster, S.W.1, contractors.

Croydon.—Messrs. Higgs & Hill, Ltd., Crown Works, South Lambeth-road, S.W., have secured the contract for the first section of the extensions to be carried out at the Croydon General Hospital in London-road, at a cost of £58,000. New out-patients' and ward departments have been designed by Messrs. H. Berney & Son, 35, High-street, Croydon.

Edgware.—Hendon Board of Guardians propose to build a new institution and hospital for 500 beds. The first section includes five wards accommodating 175 beds, nurses' home, laundry, power-house, &c. Messrs. Payne & Hobday, architects, 45, Bedford-row, W.C.; Messrs. Dolby & Williamson, consulting engineers, 8,

Princes-street, Westminster, S.W.1; Messrs. John Leaning & Sons, quantity surveyors, 28, John-street, Bedford-row, W.C.

Fleet-street.—A new branch of the National Provincial Bank, Ltd., is to be opened in a new building in Fleet-street, E.C.4, designed by Messrs. Campbell, Jones, Son & Smithers, 9, Dowgate-hill, Cannon-street, E.C.4. Mr. F. C. R. Palmer, F.R.I.B.A., Bank's architect, 15, Bishopsgate, E.C.3. Messrs. F. D. Huntington, Ltd., contractors, Broadway Chambers, Hammersmith, W.

Great Ormond-street.—The Governors of the Great Ormond-street Hospital for Sick Children, W.C.1, have under consideration rebuilding and extension at a cost of approximately £40,000, Mr. Charles E. Barry, A.R.I.B.A., architect, Parliament Mansions, Victoria-street, S.W.1.

Hammersmith.—Messrs. Stansell & Gregory, Ltd., paper container manufacturers, propose to build a new factory in Askew-road, W.12, four stories high, to the design of Messrs. Wallis, Gilbert & Partners, factory architects, 29, Roland-gardens, S.W.7.

Hampstead.—Alterations are being made to the shop premises at 8-9, Upper Belsize-terrace, for Messrs. Pitts Stores, Ltd., Messrs. Snewin Bros. & Co., contractors, 64A, Upper Clapton-road, E.15. Mr. William Gilbert, Lic.R.I.B.A., architect, 74, Broad-street-avenue, E.C.2.

Hornsey.—Building operations at Coldfall projected by the B.C. include a new school, designed by Mr. H. Carter Pegg, F.R.I.B.A., 35, Parliament-street, S.W.1. It is also proposed to reconstruct the Crouch End school.

Kensington.—Messrs. Hill & Gurr, Bromley, Kent, are erecting a block of 30 flats and five cottages for the Kensington Borough Council. Plans by Messrs. A. & J. Soutar, 8, King William-street, Strand, W.C. Quantities by Mr. E. J. Fairchild, 10, Adam-street, Adelphi, W.C.

Lewisham.—A nurses' home is to be built at the Lewisham Infirmary, S.E., to accommodate about 200 nurses. Messrs. Leslie & Co., Ltd., Kensington-square, W.8, contractors, tender amounting to £159,892. Messrs. J. Douglas Matthews, Son & Ridley, 3, Paul's Bakehouse-court, E.C.4, architects. Mr. Louis Jacob, F.S.I., quantity surveyor, 39, Bloomsbury-square, W.C.1. Mr. G. W. Martin, M.I.Mech.E., consulting engineer, 33, Arran-road, S.E.6.

Lombard-street.—Excavations and foundations are being made for the extension of the premises of Messrs. Barclay's Bank, Ltd., to occupy the corner of Lombard-street and Gracechurch-street, E.C.3. Messrs. Ashly & Horner, Ltd., 8, Aldgate, E.1, builders. Messrs. J. Campbell Jones, Son & Smithers, architects, 9, Dowgate-hill, Cannon-street, E.C.4.

Long Acre.—Premises at Nos. 87-91, Long Acre, W.C., occupied by Messrs. Odhams Press, Ltd., are to be rebuilt to provide larger printing and storage facilities, to plan prepared by Messrs. Francis Chambers & Son, 11A, College Hill, Cannon-street, E.C.4.

Norfolk-street.—Work has now been put in hand upon the extension and improvement of the Howard Hotel. Messrs. Bovis, Ltd., 43, Upper Berkeley-street, W.1, are constructing 150 new bedrooms, 50 bathrooms, restaurant for 200 persons, grill room for 100 persons, &c. Messrs. W. & E. Hunt, F.F.R.I.B.A., architects, 30, Norfolk-street, W.C.2.

Putney.—A new school for secondary education is being erected in Sutherland-grove, S.W., by Messrs. Walter Jones & Son, Ltd., 64, Victoria-street, Westminster, S.W.1, at a cost of £56,000, for the London Education Committee. Mr. G. Topham Forrest, F.R.I.B.A., architect, County Hall, S.E.1.

Regent-street.—Messrs. Dorman, Long & Co., Ltd., Central Buildings, Westminster, S.W., are putting into position the main stanchions and girders for the new Regent Arcade in Regent-street, Argyll-street and Little Argyll-street, W.1, for which Messrs. Kirk & Randall, Ltd., 146, Grosvenor-road, S.W.1, are the main contractors. Mr. S. Gordon Jeeves, 16, Han-

over-square, W.1, architect. Mr. W. H. W., 23, Farnival-street, E.C.4, quantity surveyor.

Regent-street.—Messrs. Bovis, Ltd., 43, Upper Berkeley-street, W.1, have secured the contract for the new premises near Piccadilly-circus, for Messrs. Lillywhite's, Ltd., sports outfit Shopfronts, Messrs. Frederick Sage & Co., Gray's Inn-road, W.C.

Regent-street.—Extensive alterations and additions are to be carried out to Les Grands Restaurant in Heddon-street, W.1, under the supervision of Messrs. Nicholas & Dixon, F.F.R.I.B.A., architects, 19, Hanover-square, W.1. Messrs. James Smith & Sons, builders, South Norwood, S.E.25.

Richmond.—It is proposed to carry out considerable structural alterations and improvements to the Greyhound Hotel in George-street. The owners are Messrs. Shorts, Ltd., 310, Holborn, W.C.

St. Helens-place.—A large office building, six stories high, is to be erected on a site on the east side of St. Helens-place, E.C. The owner of the estate are the Leathersellers' Company. Messrs. Dove Bros., Ltd., contractors, Cloudesley-place, Islington, N.1. Mr. Henry H. F.R.I.B.A., architect, 10, Gray's Inn-square, W.C.

Southwark.—Plans have been approved for the new block of offices to be erected in Stamford-street and Paris-gardens, S.E.1, for Messrs. Amalgamated Liffie Press, Ltd. Mr. T. J. architect, Doric House, Museum-street, Messrs. G. E. Wallis & Son, Ltd., builders, Broadmead House, Panton-street, W.1.

Strand.—Possession of a site at the rear of Strand Palace Hotel, W.C.2, will enable the directors of the Strand Hotel, Ltd., to proceed with an extension scheme, doubling the capacity of the building, and providing 900 bedrooms. Mr. F. J. Wills, 62, Oxford-street, W.1, is the company's architect.

Tooting.—It is proposed to build a new church of St. Augustine on a site in Garfield-lane, S.W.17. Mr. H. Burke Down, F.R.I.B.A., architect, 12, Little College-lane, Westminster, S.W.1.

Tooting.—A new station and booking office are to be erected on the City and South London Underground Rly. extension, to plans prepared by Messrs. Adams, Holden & Pearson, F.F.R.I.B.A., 9, Knightsbridge, S.W.1.

Victoria.—The road-widening scheme at the junction of Vauxhall Bridge-road and Victoria-road, S.W.1, includes the rebuilding of the whole block of property embraced by the "Windsor Castle" public house and the adjacent restaurant. Mr. Malcolm T. Saunders, architect to Messrs. Watney, Combe, Reid & Co. Messrs. William Woodward & Son, Great James's-street, W.C.1, are acting for Messrs. Aerated Bread Co., Ltd., Carter's Town, N.W.

Warwick-street.—Steelwork for a new block of offices and shops at the corner of Warwick-street and Beak-street, W.1, is now being fabricated by Messrs. Dorman, Long & Co., Ltd., Central Buildings, Westminster, S.W.1. Messrs. Geo. Parker & Son, Summer-road, Farnham, S.E., contractors. Messrs. Diespeker & Co., Ltd., 60, Holborn-viaduct, W.C., five floors. Messrs. Express Lift Co., Ltd., Greatcoat-street Works, S.W.1, lifts. Messrs. C. A. Manufacturing Co., Ltd., 246, High Holborn, W.C., metal windows. Mr. F. Cubitt Nichol, F.R.I.B.A., architect, 37, Norfolk-street, Strand, W.C.

Westminster.—St. Clement Danes Vestry Hall, S.W.1, is shortly to be vacated by the Westminster City Council, and occupied by Messrs. St. Clements Press, Ltd., of Portugal-street, W.C.2, for additional printing offices and works. Plans by Messrs. Emden, Egan & Co., 7, Garlick-street, Covent Garden, W.C.

Wood Green.—Thirty houses are to be erected on the White Hart-lane estate, by Messrs. Rowley Bros., Ltd., builders, Tower Works, Dunloe-avenue, N.15.

RATES OF WAGES IN THE BUILDING TRADE

READING a paper on "The Rating and Valuation Bill (1925) in its Present Form," at the meeting of the Auctioneers' and Estate Agents' Institute, on November 5, Mr. Philip Noel Faraday referred to the amazing inequalities which the Bill proposed to perpetuate. Take, for instance, he said, a shop in Bond-street with an identical frontage as a shop, say, in Hoxton, or other comparatively remote district not in the centre of London. It is conceivable to imagine the same frontage, the same depth, the same number of floors, and, indeed, identical accommodation. The shop in Bond-street was let at £4,000 a year, the shop in Hoxton at £400 a year. Under the Valuation (Amendment) Act both rents are subject to the same deduction in order to get at the rateable value; so that while the shop in Bond-street was allowed £66 for the purpose of rating for fire insurances, &c., the shop in Bond-street was allowed a sum of no less than £660 for the same purpose. The "rateable value" was the datum upon which each rate was levied; and, therefore, it was possible that in order to maintain the value of property in a state to command the rent, the landlord might more frequently paint and repair the shop in Bond-street as compared with the shop in Hoxton, it was ridiculous that the tenant should have the great advantage of a large allowance in order to find the "rateable value" upon which he paid for the shop in Bond-street as compared with the less-favoured tenant of the shop in Hoxton.

the event of equalisation of rates, which obviously at the back of the mind of the Legislature in some form or other, the application of a fixed scale of deduction to obtain rateable value would lead to a far greater lack of uniformity than could now exist. The law of supply and demand, with which Parliament could never be able to deal, might enable a tenant to escape his fair share of the burden of the taxation, according to the district in which his property was situated; and the varying scales which had been adopted by the various counties throughout England and Wales to suit local conditions, and which had in some instances been found to be equitable and just, would be scrapped in favour of a hard and fast rule applying to the whole of England and Wales, which was not valuation and required no office-boy skill to apply.

the same meeting a paper was read on
its in an Arbitration," by Mr. Ernest F.

A recent meeting of the Institution of Heating and Ventilating Engineers, Mr. J. J. reading a paper on this subject, said it might take it for granted that where the installation of heating plant involves the use of a large amount of fuel, some kind of instrument should be available to enable the attendant to record the firing, preferably to record automatically the result of his firing. When considering the performance of any heating plant in detail, a proper thermal balance sheet must be compiled in order to ascertain the details of the efficiency of the plant. The economic aspect of carbon recording was one of interest, but he did not suggest that it was a practical proposition to install a recorder where one had only a small hot water installation. A good deal of criticism against such recorders arose from the fact that the first instruments suffered from mechanical defects, and were therefore liable to go out of order. They were constructed too much by chemists who had not the proper conception of the rough and tumble working conditions in the average stockholder's plant. With modern plants far greater care and attention had been paid to the mechanical details, so that they now had an instrument which would stand years of hard work.

(For rates of wages in the Building Trade in Scotland, see page 723.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, etc

A.A.S.T.A. Smoking Concert.

The Committee of the Metropolitan Branch of the Association of Architects, Surveyors, and Technical Assistants are holding their annual Benevolent Fund smoking concert on November 26, in the "Dickens Society" Room, at Carr's Restaurant, Strand. The President (Mr. E. Fiander Etchells), will take the chair. A number of well-known West-End artists have been engaged. Coffee and sandwiches will be available during the evening, without charge. Tickets can be had of Mr. J. A. Gould (Chairman, Metropolitan Branch A.A.S.T.A.), 26, Buckingham-gate, Westminster, S.W. 1.

Wet Time Pay.

A joint meeting of the National Master Builders and the National Federation of Building Trade Operatives was held at Bedford-square on Tuesday, when negotiations for the ratification of a new agreement governing wages on conditions in the industry were continued. Progress has been made with the scheme of the joint sub-committee for payment for wet days. The original proposals, it is understood, have been somewhat modified, but the scheme will be on a joint contributory basis, and will create a fund to pay for the time lost through wet and inclement weather or other causes over which the workers have no control. A final decision will be reached next Wednesday, and hopes are entertained that the scheme will be adopted.

PROPOSED NEW BUILDINGS & OTHER WORK

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

A Timber Calculator.

re received a calculator for finding the tenths of boards, baulks or felled trees. iple is immediately grasped after a of the directions, and in a second or two ind any cubic capacity from $\frac{1}{2}$ to 800 t. By making a few tests we find that remely accurate, easy to manipulate, ot make a mistake. Its size, too, is ut, for it can be carried in a vest pocket. e obtained from W H. Wortley, 7, ove, Aylesbury, price 4s. 6d.

asing Output of French Building Materials.

of the most important factories in r the manufacture of Portland cement oyed on the outbreak of war in 1914. ee factories, one near Lille, the other à-Vendin, and the third on the efore the war produced annually at e hundred thousand tons of cement. Pont-à-Vendin was occupied first in 1915, and then was converted into a store, but as it was so close to the as turned into a fortress of cement. e Germans abandoned this in 1918, inery was destroyed by explosives. ent factories were restored in 1921. en the output of French cement has idly increasing, amounting now to million tons a year instead of one alf million before the war. In the e one of the foremost cement manu- in France, the output before long will ee and a half million. Brick fac- e, suffered badly during the war. e works, one on the Aisne and the e Oise, producing about fifteen ricks a year, were utterly destroyed e stocks stolen for German defence e have been rapidly restored, and eir output was more than doubled. e noted, however, that concrete is e bricks in France; for example, the as of a cathedral that was com- e Lille in brick is now being finished e.

THE SCOTTISH BUILDER

NEW BUILDINGS IN SCOTLAND

Lanarkshire and the Government Subsidy.—The Lower Ward District Committee of Lanarkshire has decided to decline the Government's additional subsidy of £40 per house in respect of steel houses, or houses of similar type. It was pointed out by the Housing Committee to the Scottish Board of Health that they did not anticipate any difficulty in finding sufficient labour and materials to carry out their housing scheme according to the usual methods of construction.

Inverness.—STEEL HOUSES.—The Inverness Town Council has resolved by the casting vote to erect 25 steel houses as against 10 recommended by the Housing Committee.

Edinburgh.—HOUSES.—The Edinburgh Town Council has decided to build 500 houses. Of the 500 houses 304 are to be of three apartments and 196 of two apartments.

Glasgow.—EXTENSIONS.—The Governors of the Victoria Infirmary of Glasgow are making a special effort to raise funds for the extensions of the institution. They aim at obtaining a total sum of £100,000.

Dunfermline.—COTTAGES.—The Dunfermline District Committee of Fife County Council has agreed to pay a sum of £8,840 to the Wilsons & Clyde Coal Co., Ltd., to account of subsidy in respect of the erection of eight single-story cottages of three apartments, 58 flatted houses of three apartments, and 28 flatted houses of two apartments at Steeland, Saline. It was stated that the total subsidy payable in respect of the erection of houses by the Company at Steeland was £11,840.

Paisley.—BUILDINGS.—The valuation of the 57 linings dealt with by Paisley Dean of Guild Court for the year was £232,300, an increase of £24,700 as compared with the valuation of the 69 linings approved in the previous year. Plans passed included the erection of 10 tenements at Springbank-road for slum clearance

purposes, 102 houses at Lounsdale, and 214 houses at Lochfield. The plans were also passed during the year of 24 villas and bungalows, comprising 58 houses.

Dumbartonshire.—HOUSES.—The Eastern District Committee of the Dumbarton County Council has decided to ask the County Council to approve the borrowing of £20,500, as the estimated cost of 50 houses proposed to be erected in a new scheme at Bearsden. The Housing Sub-Committee are negotiating for a site on Killermont estate, near St. Peter's College. The County Council and Standing Joint Committee has approved of the borrowing £74,486 for the erection of 200 houses at Auchentoshen, Duntocher, as also £4,000 for the new bridge over the Kelvin at Killermont, and £9,000 for new sewers and works at Cumbernauld.

Renfrew.—STORE.—The Dean of Guild Court passed plans for new buildings of the Renfrew Equitable Co-operative Society, having the frontage in Pinkerton-lane. The estimated cost of the building is £20,000.

Coatbridge.—SCHOOL.—The Dean of Guild Court passed plans for a new technical school and mining college at the junction of Kildonan-street and Eglinton-street, at an estimated cost of £80,000, for the Lanarkshire E.C.

Tranent.—HOUSING.—The T.C. has decided to borrow £4,000 for housing purposes.

Edinburgh.—VARIOUS.—Plans passed by the Dean of Guild Court: Exhibit hall and store at Royal Scottish Museum, Chambers-street, for the Commissioners of H.M. Works and Public Buildings; alterations at Southfield Sanatorium, Liberton, for Royal Victoria Hospital Tuberculosis Trust, per Mitchell, Sidney & Wilson, architects, 13, Hill-street.

Glasgow.—HOUSES.—The Dean of Guild Court passed plans for the erection of garages by Corporation tenants at Mossbank and Beddrie. Others granted were: G. & J. Weir, Ltd., Cathcart, to erect four steel houses at Barfillan-drive, Cardonald; Messrs. Taylor & Wilson, Cardonald, to erect 16 houses at Kent-avenue, Jordanhill.

BUILDING TRADE WAGES IN SCOTLAND.*

THE following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

	Masons.	Brick-layers.	Car-penters, Joiners.	Plas-terers.	Slaters.	Plum-bers.	Painters.	Labourers—Masons', Bricklayers', Plasterers'.

*S. Salter, Portsmouth	33,812	0	0

SEFTON.—Six houses in Victoria-road, Inceblundell, and twelve houses at Lydiat-lane and Russell's-lane, for the R.D.C. Mr. E. B. Bailey, L.R.I.B.A., architect, 9, Cook-street, Liverpool:—
 *Walter Spencer, Aintree.

SHEFFIELD.—166 houses on the Manor estate, for the Corporation:—
 *S. Highton & Sons (16 houses) .. £6,623 10 6
 *W. Marlow & Sons, Ltd. (37 houses) .. 15,291 0 0

*A. Morris, Ltd. (25 houses) .. 10,500 0 0
 *Melling Bros., Ltd. (25 houses) .. 11,223 0 0
 *G. M. Prying (10 houses) .. 4,455 0 0
 *J. Laver & Sons (49 houses) .. 21,060 0 0

*Building & Engineering Contractors, Ltd. (3 houses) .. 1,320 0 0
SHETLAND.—Lighthouse, dwelling house and stores, and a roadway and water supply at Eshaness, for the Northern Lighthouse Commissioners:—
 *J. Anderson, Stromness.

SKEGBY.—Construction of about 4,765 yards of stoneware and iron pipe sewers, with manholes and all appurtenant works, and the erection of detritus pits, Dortmund tanks, mud drying beds, and other sundry works, for the R.D.C. Messrs. W. H. Radford & Son, engineers, Albion Chambers, King-street, Nottingham:—
 *Ward & Tetley, Bradford

STAFFORD.—Thirty non-parlour type houses on the Littleworth housing estate, for the T.C. Mr. W. Plant, Borough Engineer:—

*F. Espley & Sons, Stafford—16 houses £7,478
*G. Sandy & Co., Stafford—14 houses 6,627

THURGARTON.—Improvement of bridge, for Notts C.C.:—

†C. S. Tomlinson, Derby £401 1 7

WALTHAM.—School at Peaks-lane, for the Holland C.C. Messrs. Scorer & Gamble, architects, Bank-street Chambers, Lincoln:—

†E. E. Dale & Sons, Ltd. £4,726 1 6

WANDSWORTH.—New town hall and alterations to the existing town hall, in the High-street, for the B.C. Mr. E. J. Elford, Borough Engineer, 215, Balham High-road, S.W.17:—

F. G. Minter, Ltd. £41,380 0
G. E. Wallis & Sons, Ltd. 41,276 0
Walter Jones & Sons, Ltd. 40,995 0
Higgs & Hill 40,400 0
James Carmichael, Ltd. 39,994 0
Marland & Sons, Ltd. 38,675 0
Rice & Sons, Ltd. 38,476 0
Garrett & Son 38,311 0
Prestige & Co., Ltd. 37,984 0
Leslie & Co., Ltd. 36,761 0
*Lole & Co., Chelsea 35,775 5

WARWICKSHIRE.—Reconstruction of six bridges on the Birmingham-Coventry main road, for the C.C.:—

*A. E. Farr £10,567 11 8

WASHINGTON.—Forty-two houses on the Spout-lane site, for the U.D.C. Mr. R. J. Swaddle, architect, Council Chambers:—

24 Houses—
*J. G. Mark, Sunderland £9,852

18 Houses—
*H. Wilson, Tatfield, Washington. 7,542

WATFORD.—Alterations and additions to the Police Station at King-street, for the Hertfordshire C.C.:—

	Alterations and Decorations.	Electric Light.
G. Wiggs & Son	£2,220 0 0	£274 0
Bracey & Clark	2,125 0 0	335 0
Clarke Bros.	2,124 0 0	280 0
Brightman & Son	2,045 0 0	295 0
*A. J. Eldridge	1,837 19 4	293 10

WAYLAND.—For (a) two houses at Banham; and (b) two houses at Rockland All Saints, for the R.D.C. Mr. Clifford Whitworth, surveyor, Attleborough:—

(A)
H. C. Tofts, Hingham £895 0 0
J. Smith Eldon, Bunwell 840 17 6
*Pearson Bros., Diss 790 0 0
(B)
J. Smith Eldon, Bunwell 840 17 6
H. C. Tofts, Hingham 800 0 0
*W. Peeke Vent, Caston 790 0 0

WIDNES.—Extensions to central premises, for the Runcorn and Widnes Co-operative Society. Plans by Architect's Dept., C.W.S., Ltd., 1, Balloon-street, Manchester:—

*Building Dept., C.W.S., Ltd., Manchester.

YORK.—Enclosing the Corn Market in Coppergate, for the T.C.:—

*W. Usher £256 9

Freight Train Traffic.

We have received from the London, Midland & Scottish Railway a map showing their goods stations and coal depots in London, to which builders and others can consign goods and materials. The map, on which routes and streets are clearly printed in black, and the stations in red, is mounted on cardboard and provided with cord, making it suitable for hanging on an office wall. Other useful information is also given, and the map may be had free on application from F. P. Kinsman, L.M. & S. Railway, Broad-street Station, E.C.2.

NOVEMBER 20, 1925

ARCHITECTURAL COMPETITIONS

THE architect's interest in public competitions is historic and perennially renescent; it is consequently a subject upon which much useful discussion can take place. Upon the various aspects of modern architectural competitions much has been written, many more often than not diametrically opposed to each other have been expressed, and much still remains to be decided.

Theory it would be easy to demonstrate that the open competition is not the best means of obtaining an architectural piece, or even a reasonably satisfactory and well-balanced composition, because the close co-operation between architect and his client, which is so essential in the earliest stages when the project takes form, is necessarily lacking; it is only to be found that many of the notable works of architecture of the past and modern times have resulted from this co-operation and exchange of ideas.

On the other hand it can be objected that, as architectural competitions in various forms have existed from time immemorial, the principle must be accepted as having stood the test of time, and probably it is the best that can be devised under a democratic system of government, it is desired to obtain the best architectural advice available and to give equal opportunities to all qualified architects.

Whether a democratic age or system of government can ever produce fine architecture (save in quite exceptional circumstances), is, of course, another question, which need not be discussed here as it does not affect the particular aspect of the question of competitions to which we wish to direct attention. It is considered in some opinions which we publish in this issue. Accepting, therefore, the modern public competition system, we may consider in what respects the system could be improved and where the weak points lie.

The chief and essential defect (which is patent to any observer) is the question of the interpretation of the conditions. Too often it happens that the assessor or jury select conditions which, presumably, satisfy the promoters and their technical advisers consider will produce a result in accordance with their desires and intentions, but which, in the end, they appear to disregard in one or more particulars when the award is made.

The present state of affairs seems eminently unsatisfactory, and we suggest that it is an aspect of the question which might be considered by the Royal Institute of British Architects. It appears obvious that uncertainty with regard to the interpretation of conditions brings discredit on the competition in the R.I.B.A., and on the whole profession; it is unfair to ask a large number of architects to compete in an important competition unless they have a reasonable assurance that the published conditions will be adhered to in the award or, alternatively, are definitely and clearly stated that the intention is to accept the design which best fulfils the intention of the conditions, taken as a whole, and with strict adherence to any particular item.

Things stand, and as recent correspondence in our columns has demonstrated, there is no sufficient indication of this kind; it does this deter many well-known architects from entering in competitions, but it also produces insincerity in the competitor who feels that he will probably be able to win the scheme considerably before it is built, and also it leads to delay in execution and general dissatisfaction to all concerned. This factor is of some importance, especially in the

case of business firms, who would probably adopt this method of obtaining the best architectural talent available if they could be reasonably certain of a swift and satisfactory result.

Another factor which does not perhaps receive sufficient notice is the one which naturally presents itself to municipal bodies of our large towns and cities. Here it is a matter of some difficulty—in the case of an unsatisfactory competition—to obtain alternative designs, because the auditors are averse to sanctioning expenditure of this kind. This is more particularly the case where an architectural or engineering staff exists, as it is obviously a much easier matter for a committee to obtain alternative designs and estimates from their own staff than to consult independent architects and provide money for assessors' fees and for premiums for a result which may be inconclusive or open to criticism.

Then, again (turning from the more general aspect of the question to those points which affect competitors), it appears to us that in most important competitions much unnecessary labour could be saved and the task of the assessor or jury could be simplified if all such competitions were arranged in two stages—a preliminary contest where sketch plans only (to as small a scale as might be possible) were required; and, later, a further competition, limited to selected architects, from whom more detailed schemes could reasonably be required.

In many cases, it would probably be quite satisfactory if a final award was made on sketch plans in the same way as (in the case of a private client) a decision is usually arrived at on such plans before the working drawings are put in hand. Anyone who has had any experience of the average competition would probably agree that between 60 and 70 per cent. of the designs sent in show a fundamental inability to grasp the essentials of the scheme, as well as a weakness in composition which causes these sets to be immediately eliminated. It therefore seems unnecessary that such competitors should spend a considerable amount of time, and sometimes a good deal of money, in elaborating schemes which are hopeless from their inception.

Finally—the most delicate point of all, upon which we touch with all diffidence—the varying methods and ability of assessors themselves must be considered. We heard recently of a well-known architect, who has had a distinguished career and great experience, but who stated that, in a competition, his aim was to select the man whom he considered gave evidence of being the most capable architect without any special reference to the design submitted. This method may, of course, give quite admirable results in practice, but it certainly increases the difficulties of the competitors. It would appear to be desirable that some clear and definite rules with regard to such things as pricing per foot cube, the elimination of non-essential plans and drawings—such as perspectives—and a schedule of marks to be awarded to competitors for each special point in the conditions, should be agreed and observed by all assessors.

It would also be an advantage if the services of such a body as the "Beaux Arts Committee," composed as it is of architects who have knowledge of the excellent method of the jury of the Beaux Arts School of France, practised in the United States and elsewhere, and who, moreover, are all architects in practice with considerable experience, could be enlisted and, perhaps, form the nucleus for a Board of Assessors to whom fees would be of less importance than a skilled judgment and impartial exercise of their functions. We feel that there is evidence of a reasonable demand that assessors should not be merely architects of high standing and personal ability, but also that they should possess the special qualifications, experience and courage required in this work, which are not necessarily acquired by the successful business architect, or the equally famous artist, but which can be acquired only by training and experience.

NOTES.

The R.I.B.A. Soirée.

To celebrate the amalgamation of the Society of Architects with the R.I.B.A. perhaps no better way could have been found than by means of a soirée; but beyond the unqualified success of the event almost the only fact to be recorded which suggested the consummation of a long-deferred hope was the large and representative gathering of members of the profession, now represented by one body—the Royal Institute of British Architects. The soirée was held in the Institute Galleries on Friday last week, and the members and guests were received by the President and Mrs. Guy Dawber, and Mr. A. J. Taylor, past-President of the Society of Architects, and Mrs. Taylor, and the evening was passed in an altogether happy fashion in conversing with friends and acquaintances and in the satisfaction which must have been generally felt that the long-deferred unification of the profession had really been brought about.

The Architect and the City.

DR. RAYMOND UNWIN'S paper on "The Architect and his City," read before the R.I.B.A. on Monday, was a suggestive and practical contribution to the everyday discussion of subjects of considerable professional interest. We give the greater part of the paper elsewhere, but we should like to refer to one of the suggestions of the author, as it

may be that, as the greater includes the less, so his suggestion that as house building far outweighs all other branches of work in volume and in value, it "exceeds it in the influence which it exerts on the minds of the people and in the extent to which it may contribute to or ruin the beauty of cities." It is, of course, natural that architects should aspire to design great buildings, but, as Dr. Unwin remarks, even that more distinguished work must, in the long run, depend on the appreciation of the public. He suggests, not only that this approach to architecture from the dwelling is best for the architect, but that "the interest and appreciation of the people can best be stirred in their home, whence it will spread in widening areas until it inspires the whole town." We refer to this point in an admirable address, as it is a suggestion which has already been made in our columns.

Our Neighbours and Ourselves.

To travel in France is to reveal to what an extent the excesses of advertising have invaded this country. Paris has, no doubt, caught something of the infection in that more cosmopolitan Paris which is not Paris itself, but away from the centre we may explore every street and open space, whether in Paris or provincial cities of France, without so much as seeing an advertisement at all. The French retain a respect for their cities which we might with advantage copy. Another difference that strikes us, to the advantage

of the beauty of their cities, from the economy it pre-supposes, more restrained lighting of the streets. Nature is not wholly excluded and adds drama to the night, which our lighted thoroughfares miss altogether except for some quiet square or street. Night has its own beauty and delight us if we will permit it, and tecture is seldom seen under better conditions or is more impressive than the shadows half-reveal and mingle their forms, translating it into dignity as it sleeps under the stars.

The Human touch in Building.

THERE is no occasion to put the very real importance in architecture in suggesting that it much lacks that contribution of craftsmanship characteristic of old crafts. Rather we think that with so general improvement we ought not so often that more human and personal touch; the unexpected quality reveals to us the closer relationship of craftsmanship to architecture. We value taste and restraint, but without always more than negative quality we lack the creative addition, and it appears that the architect's approach lacks the inclusion of the freshness more corporate thinking would give. It is only "a little more, but here it is"! In so much good building that taste and restraint rule out ostentation, and often announce itself by a rigid a convention and formality.

General View of the Liverpool Homes for Aged Mariners, Egremont (Manor House Hospital on extreme left). (See p. 736.)

Church at Chickney.

of freedom which this entails is personally a stage before new vision in these. To be an autocrat is not the best mode for the artist, and the architect is artist—and should believe that the perversion of the craftsman may be necessary for his own completion. It is not to curtail his prerogatives when, in the moral and creative sense, the strength of craftsmanship is joined to architecture.

We can imagine that Canterbury Cathedral is the most universally appealing to those who hold a reverent regard for our old Cathedrals, whether with some sense of their artistic value. One point of great interest in Canterbury is that it is one of the best documented churches in the world. As architect-in-charge of Canterbury Cathedral for the Dean and Chapter, W. D. Caroe has had a fairly long-standing knowledge of it, and has a special right to be heard on matters relating to ecclesiastical art, which have probably occupied him as widely as any other architect of the present time. He has had unique opportunities in his capacity as architect to the Ecclesiastical Commissioners of comparison and study of every large number of churches in the country, and we may gather from a lecture he delivered in the Chapter House in July that he would almost give the place of place amongst our churches to the wonderful epitome of English architecture which Canterbury presents. He says for it that not only was it the first Norman Cathedral erected in this country, but that the documents relating to it show practically every step in its erection. The reprint of his interesting lecture, which has just been issued, deals with the building under its Dean and Chapter down to 1829. A reproduction of a water-colour painting by Thos. Johnson of the cathedral as it appeared in 1657, which was given to Mr. Caroe, is given with the lecture.

We read, in connection with a new invention for shuttering concrete, that "the system can be adapted in order to give a plain face, or a face resembling stone blocks, or even half-timbered effects to concrete houses." There can be no valid reason why concrete should not be satisfactorily and pleasantly used as a filling between oak framing, or even weaker panels in concrete used in the same way between reinforced framing members. We rather fear, however, that the announcement that concrete can be made to imitate half-timber may be taken literally, and that if it is found at all possible to produce a real sham in concrete it will quickly be perpetrated. We hope that builders will unite in keeping our comparatively new material free from the more depressing manifestations of pretending to be something that it is not.

The Hudson Disfigurement.

RESPONSIBLE people who disapprove of Mr. Epstein's panel will, we feel sure, join with those who admire it in deploring the foolish piece of vandalism committed by irresponsible young men in disfiguring the memorial. If youths feel themselves at liberty to destroy public property that they do not like, nothing can be safe and every new work will be in danger of wanton injury. This argument is independent of the fact that the better the work the greater will be its danger, since a conventional waxwork replica of a stout gentleman complete with umbrella and trousers would be accepted as a matter of course and would therefore be immune from molestation.

Colours in Concrete.

VARIOUSLY-COLOURED concrete, manufactured by combining certain pigments with the aggregate, seems likely to come into vogue for the walls and roofs of London houses. The London County Council have, it appears, decided to build concrete houses in various colours, which will, according to an evening contemporary, remove the reproach so often levelled against the concrete house, that it looks grey and dingy. "It is now possible," remarks our contemporary, "to reproduce all kinds of well-known building stones in the form of concrete, and so satisfactorily that the average man would never know the difference." The external use of colour for stucco or concrete has not hitherto received the attention it deserves, and architects will doubtless welcome this opportunity to introduce a novel form of decoration. But, in seeking to educate the architectural taste of the average man, let us not encourage him to admire shams that would have enraged Pugin and horrified Ruskin.

An Ancient Church.

THE church at Chickney which we illustrate, recently visited by the Essex Archaeological Society, is no longer used for regular worship, but its antiquity and architectural interest are such that it is hoped to raise a sufficient sum to preserve it from ruin or destruction. Among other features of pre-conquest date is the double-splayed window which can be seen in the photograph. The parish was possessed by "Siward, a King's Thegn," in the time of Edward the Confessor.

Church in Belgium : Thirteenth Century.
Watercolour by F. ROSCOE.

GENERAL NEWS

Guildhall Art Gallery.

A scheme will soon be brought before the Court of Common Council for rebuilding the Guildhall Art Gallery on a larger scale.

Harrow School Tower.

The south tower of Harrow School Speech Room has been completed from plans by Sir Charles Nicholson; it is designed for a belfry which will accommodate a bell of 12 cwt.

Archcliffe Fort, Dover.

Arrangements have been completed with the military authorities at Dover for the demolition of Archcliffe Fort, which is necessary before the rebuilding of the railway station can be carried out.

Proposed Hull Bridge.

A scheme for the construction of a new bridge over the River Hull, at an estimated cost of £275,000, will be included in the next omnibus Bill which the Hull Corporation will submit to Parliament.

Old Sadler's Wells.

In the course of clearing up the debris of the old Sadler's Wells Theatre, workmen have disclosed one of the ancient wells which were once famous for their supposed medicinal properties.

Proposed University, Hull.

A meeting to inaugurate the scheme for a University College at Hull, which has been made possible by the recent generous gift of £250,000 from Mr. T. R. Ferens, has been held at the Hull Guildhall.

Coloured Concrete Houses.

Mr. G. Topham Forrest, architect to the London County Council, has announced that the L.C.C. will in future build in coloured Portland cement. This will improve the appearance of the house without having periodically to re-colour the external walls.

Fitzwilliam Museum.

Mr. Dunbar Smith, F.R.I.B.A., of 6, Queen's-square, London, W.C.1, has been appointed architect for the extension of the Fitzwilliam Museum, Cambridge. New manuscript and coin rooms are to be added.

Proposed Sunderland Quay.

Sunderland Town Council has adopted a scheme for a deep-water quay on the riverside at the East End. This includes the construction of a quay 600 ft. long, and a warehouse 300 ft. long, with the necessary roads and railway lines. The cost is estimated at £200,000.

Barnsley Proposed Mining College.

Plans for the proposed new mining college at Barnsley, which is to conform to the architecture of the proposed Town Hall, are now being prepared, the architects being Messrs. Briggs & Thornely, Royal Liver Building, Liverpool.

St. Ermin's Hotel, Westminster.

Mr. Ernest Yates, estate agent, of Bond-street, W., has purchased the building formerly known as St. Ermin's Hotel, Westminster, and will convert it into service flats, residential and other clubs, including a women's Bath Club and a public restaurant.

An Appointment.

Mr. Richard Wylie, A.R.I.B.A., of Grainger-street West, Newcastle, has been appointed Diocesan Surveyor to the Durham Diocesan Dilapidations Board, in succession to Mr. W. J. Moscrop, of Darlington, who has retired after occupying the post for thirty-four years.

Oak and Concrete Houses.

Six houses of the "Tibbenham" type are to be erected at Bellingham. The essential feature of these houses consists of walls of an oak frame with a filling of concrete. The

Minister of Health has approved of their cost being charged against the Assisted Housing Scheme.

Salisbury's Ancient Buildings.

Steps are being taken by Salisbury Town Council to preserve the ancient buildings of the town as a result of the projected scheme of the Ministry of Health, which may adversely affect cathedral cities from an artistic standpoint. The only regulations that the Ministry are asking the local authorities to enforce are those in regard to houses that have been condemned as unfit for human habitation.

South London Housing.

The Housing Committee of the London County Council wish to accept a proposal for obtaining possession for housing purposes of a site of about 2 to 3 acres in White Hart-street, Kennington, which forms part of the estate of the Duchy of Cornwall. The site is suitable for redevelopment by the erection of dwellings capable of accommodating about 900 persons.

A Long Island Venice.

A scheme is now under way for constructing on Long Island an "American Venice," at an estimated cost of £2,000,000. Contracts have been given for the construction of the necessary canals and waterways, and also for a large lagoon, 240 ft. by 600 ft. It is stated that "the all-the-year-round homes to be built on this tract will follow in every way the Italian architecture which makes Venice so picturesque."

Ulster Building.

A commencement has been made at Stormount Castle estate, with the building by the Government of Northern Ireland of the new Parliamentary buildings, at a cost of £1,000,000. The architects are Messrs. Briggs & Thornely, Royal Liver Building, Liverpool, and Messrs. Knott & Collins, Adelphi-terrace House, W.C.2.—Plans are in course of preparation for 134 houses for ex-service men, and another 179 are soon to be built.

St. Clement's Church Restored.

The church of St. Clement's, Eastcheap, built by Wren in 1686, will be reopened on Monday after restoration work to the roof. Two years ago it was discovered that the timbers of the roof had been entirely eaten through by the "death-watch" beetle, and the church was closed under a "dangerous structure" notice. The only real remedy was the erection of a new roof, which has now been effected. The beautiful wreath on the old ceiling (Wren's work) was carefully taken down and has been skilfully replaced on the new ceiling.

Excavations at Ur.

Mr. C. Leonard Woolley, Director of the Joint Expedition of the British Museum and the University of Philadelphia, addressing a meeting held recently in Kingsway Hall, spoke of the discovery of a temple excavated near the city of Ur in the Chaldees. It was built by an important King of Ur, who reigned somewhere between 3,500 and 3,300 B.C., and was of brick covered with wooden panelling, raised upon a platform approached by a flight of stone steps. At the door stood statues of lions made of copper, and on each side of the door were columns encrusted with mosaic in mother of pearl and red and black stones. Along the base of the walls were statues of bulls in metal, the oldest metal statues known to us by a thousand years, and so well made that modern brass founders said they could not beat the work. Above this was a frieze with figures of white stone inlaid against a black background, representing cattle and farmyard scenes. They also found a small marble tablet which was the foundation stone of the building, and the inscription on it explained that the Temple was built in honour of the goddess Nin-Kharsag. Near the Temple, Mr. Woolley said, he found a cemetery of the same date; round the bodies were placed the things they had needed in this life—foodstuffs in jars, weapons and tools in the case of a man, and beads, rouge, and eye-

paint in the case of a woman (which she believed in an after life).

Turning to the city of Ur, Mr. Woolley says its main feature was the Ziggurat—the tower upon which stood the holy Temple of the city, dedicated to the Moon God; it was 200 ft. long, 150 ft. wide, and still stood 70 ft. high. It was made of solid brick set in bitumen instead of mortar.

COMPETITION NEWS

House Building, Moor Park.

Moor Park, Ltd., announce that Messrs. Crossley & Sons, of Bromley, Kent, have been awarded the first prize in this competition.

Competitions Open.

Particulars published in "The Builder."

- Town Hall, C.C., Pretoria. Open to architects residing in South Africa or Registered under Architects' Act, of 1909, Transvaal. Assessor to be appointed by R.I.B.A. Premiums: £250, £150, £100....
- Argentine Institute. Premiums 10,000, 6,000, 4,000, 3,000, 2,000 gold pesos. Apply parties., 35, Old Queen-street, S.W.1 April 24
- New Buildings for Liverpool College, Mossley Hill. Sir Giles Gilbert Scott, R.A., Assessor. Premiums: £500, £300 and £200. Apply to J. H. Lintern, Secretary, Liverpool College, Sefton Park-road, Liverpool Aug. 7
- Houses for Smaller Middle-Classes and Intellectual Workers. Held under auspices of International Federation of Building and Public Works. Prizes: 1st, 500 dollars; 2nd, 300 dollars; 3rd, 200 dollars. Write to Director-General of the International Federation, 17, Avenue Carnot, Paris Oct. 30.
- Art Gallery and Museum, Birkenhead. Limited to competitors practising within 20 miles of Birkenhead since January 1, 1923. Premiums: £250, £175, £100. Sir Robert Lorimer, A.R.A., assessor. £22s. deposit. Apply Curator, Central Public Library, Birkenhead Oct. 18
- Australian War Memorial, Canberra. Open to architects of Australian birth. Apply High Commissioner, Australia House, Strand, London. Aug. 14
- Royal National Eisteddfod of Wales, Swansea. Competitions: (1) National Parliament House of Wales (Prize, £100); (2) Street Facade to a Large Stores (Prize, £25); (3) Set of Measured Drawings of Architecture (Prize, £25). Apply to General Secretary of Eisteddfod, W. Talog Williams, 24, Goat Street, Swansea. Mr. Arthur Keen, F.R.I.B.A., Assessor. Nov. 6
- Incorporated Architects in Scotland: (1) Rowand Anderson Medal and £100; City Art Gallery and Museum; (2) Rutland Prize (£50) for Study of Materials and Construction; (3) Prize (£10 to £15) for 3rd year Students in Scotland; (4) Maintenance Scholarship, £50 per annum for 3 years. Apply Secretary of the Incorporation, 15, Rutland-square, Edinburgh Nov. 6
- Plan for construction of Conference Hall, for League of Nations, Geneva. International Competition, Sir John Burnet being British representative on Jury of Assessors. 100,000 Swiss francs to be divided among architects submitting best plans. Programmes with R.I.B.A., 9, Conduit-street, where intending competitors should apply. Single copies from Secretary-General, League of Nations, Geneva, on payment of 20 Swiss francs. Jan. 2
- *Guisborough Proposed New Hospital Competitions when "warned" or veto R.I.B.A. are starred.

War Memorial and Roll of Honour to the Men of Dover.

MR. RICHARD R. GOULDEN, Sculptor.

[This memorial is erected in front of the Municipal Offices. The materials are Cornish granite with a bronze central feature. The figure of Sacrifice is grasping a flaming Cross, his feet encircled with thorns.]

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

St. Paul's Cathedral.

SIR,—Mr. Henthorn Stott's interesting letter in *The Builder* raises some points which ought to be decided in the interests of the proper repair of St. Paul's Cathedral. A comparison of St. Paul's and St. Peter's brings into prominence Wren's mastery of the science of economic building construction. St. Peter's, built in Rome within walking distance of the massive remains of antiquity, is a ponderous building erected regardless of expense in accordance with a grandiose tradition. St. Paul's is built in a land whose other cathedrals are Gothic buildings and whose tradition favours an intelligent fineness rather than brute mass in building. St. Peter's dome has cracked and has been repaired, in spite of its enormous thickness of material, and because of faulty disposition of weight and thrust. Nearly all the defects in St. Paul's may be attributed to Wren's attempt to erect a domed central feature comparable in height with that of St. Peter's (when measured from the top of the main vaults), upon an open plan of Gothic character with continuous aisles and with piers and walls of extremely slight dimensions.

Wren's chief mistake, if it can be called a mistake to build so noble a monument, was to attempt too much with insufficient means. His building has lasted more than two hundred years, and is failing now through wear and tear in every part, not through a blunder of design in any particular part. A slight unequal settlement on the subsoil indicates economy in foundations. The outward leaning walls confess to economy in the buttressing arrangements. Cracks in the main piers show that too much money was not spent on them. The thirty-two counterforts have proved somewhat too slight for their function as distributors of weight and thrust. The thirty-two diaphragm walls have proved just insufficient in strength to unite the inner and outer drums of the dome. The upper part of the west towers have been found so thin as to need repair to make good the erosion of the last two hundred years.

Consistent and studious economy is apparent throughout the whole structure, and the structure as a whole needs treatment of a comprehensive order based upon a thorough examination and analysis of pressures and resistances in every part. I have shown in my book, "The Preservation of St. Paul's Cathedral and Other Famous Buildings," how such an analytical survey may be undertaken, by means of superimposed plans and by the making and testing of analytical models, and I have also outlined some of the operations that will be necessary to reinstate the building. Such repairs will naturally be expensive, for they would aim at giving to the building the strength that Wren denied it for lack of funds, but as Mr. Henthorn Stott appropriately asks: "Are not those vast sums now being spent in danger of being utterly lost?" It is my own firm conviction that the present grouting and patching scheme is far worse than useless, and that the money spent upon it is worse employed than if it were thrown into the sea. To apply grout under pressure to rubble-filled, ashlar-cased piers already suffering from bursting pressures applied by a tremendous eccentric oblique load, and to apply it before the arches are centred or the piers in any way shored up is to invite a disaster, and the process should be stopped forthwith. The material of the core in the piers is of a nature to make grouting futile, and the conditions of oblique eccentric loading are such as to make its application dangerous.

Mr. Henthorn Stott raises the question whether Wren would not advise demolition; but this is a question which cannot be an-

swered. Wren himself was called upon to act as conservator from time to time, and showed a disposition in some cases to adapt the old work to the uses of his own time rather than to demolish it. He certainly condemned old St. Paul's, but he was not in possession of modern means of repair. "Cost as well as sentiment must be considered," but can any limit of cost be assigned to the repair of a priceless monument? Actually vast sums have been spent from time to time on patching schemes little less futile than that now being applied. Within the last generation both the west front and the south transept gable have been stitched in with substantial tie-bars to the moving bodies whose thrust is forcing them out! No one has protested that the cost of these measures has been grudging by the public, and there is no reasonable doubt that the large sums necessary for comprehensive repair would be forthcoming in response to a straightforward appeal in favour of a thoughtfully and thoroughly devised scheme.

Too much stress must not be placed upon what Wren might or might not have meant by the various devices he used in his building. His problem was to erect a sound new structure; ours is to maintain and reinstate an old structure moving steadily towards collapse. Wren very possibly felt quite satisfied with his work, which could not have been improved upon without violating (a) limits of expense, (b) his conception of what was due to the claims of the good Roman Manner, (c) his expressed reluctance to use reinforcement except as an additional precaution.

By departing from the use of round-headed arches Wren might have made the bastions take some of the weight of the dome, but the good Roman manner insisted upon the round-headed arches. A greater spread of abutment in bastions and transepts would have made it possible for him to spread the weight, but the expense was prohibitive. Chaining the bastions and transepts in with a central tension ring of reinforcement would also have permitted of weight-spreading operations, but the formidable extra cost would have imposed an insuperable obstacle to this even had Wren wished to use tensile reinforcement.

The great chain of reinforcement employed by Wren at a higher level probably does violence to his own maxim that buildings should be designed to stand without iron. He provided a circular podium to the outer dome in a position where its weight would modify the lateral pressures of the inner dome and the cone, but there is no doubt that the chain is doing useful work and has been taking strain from the time the building was supplied with its lantern.

In the present repairs it is not money that is lacking, but knowledge. The Commission, after a partial survey of the building, has decided upon a pernicious scheme of so-called repair by grouting, and the new committee probably feels compelled to uphold it in spite of advice and criticism. Some slight signs of comprehension are to be seen in the adoption by the committee of my suggestions that reinforcement would be necessary, that the drums should be encircled with reinforcement, and that the National Physical Laboratory should be employed to discover an appropriate metal for the purpose, but much remains to be done. As I have already insisted elsewhere, a complete survey of the building must be the first step.

WILLIAM HARVEY.

Waterloo Bridge.

SIR,—It is rather surprising to see Sir Reginald Blomfield's letter in *The Times* criticising a brother architect's report on Waterloo Bridge after his (Sir Reginald's) recent remarks at the opening meeting of the Institute on architects criticising each other's work in the public Press. It is fairly obvious that Sir Reginald has missed the whole point of Sir Edwin Lutyens' report. Nothing could confirm the necessity for leaving the bridge as it is more than does this report. Sir Edwin was consulted officially and Sir

Reginald's criticism is unsportsmanlike. has any protest to make let him make it through the official body representing the profession The Royal Institute.

In his speech at the Institute Sir Reginald spoke of "young architects." It is generally believed that when an architect ceases to be young he no longer counts in the scheme of things. If the profession does not keep its young, even at 80, he has mistaken his mission. We all wish to see the Bridge preserved and Sir Reginald may rest assured that the profession can be trusted to see that it is served. No sacrifice is too great which serves such gems as Waterloo Bridge.

WILLIAM DAVIDS

Edinburgh.

[We would point out that in his speech R.I.B.A. Sir Reginald laid no strictures the criticism of opinion on matters of importance such as the threat to Waterloo Bridge. What Sir Reginald deprecates Press criticism by architects of the architecture work of their professional brethren.—Ed

MEETINGS

MONDAY, November 23.

Architectural Association.—Mr. M. Robertson on the "A.A. Excursion, 1931-34, Bedford-square, W.C.1. 7 p.m.

TUESDAY, November 24.

College of Estate Management.—Mr. B. Unwin on "Town Planning." At 35, Lincoln Inn Fields, W.C.2. 5.30 p.m.

WEDNESDAY, November 25.

Liverpool Architectural Society.—Mr. J. brick on "Robert Adam." At 13, Hanover street.

St. Paul's Ecclesiological Society.—Mr. Woolley on "De La Mare Brass in St. Paul's Cathedral, and some Nottinghamshire Lincolnshire Easter Sepulchres." At 9, G street, W.1. 8 p.m.

THURSDAY, November 26.

Stepney Public Libraries.—Mr. E. W. Piper on "An Evening in Westminster." At 236, Cable-street, E.1. 8 p.m.

Victoria and Albert Museum.—Mr. Kendrick on "English Tapestries." At Kensington, S.W.7. 6 p.m.

Association of Architects, Surveyors Technical Assistants.—Annual Bohemianing Concert. Carr's Restaurant, 264, The W.C.2. 7 p.m.

Forthcoming Books.

Professor A. E. Richardson, of University College, and Mr. H. Donaldson Ebbel Philadelphia, are producing a fully illustrated account of "The English Inn: Past and Present," dealing with its history, so coaching, signs, small taverns, and old. The book is illustrated from photographs, old prints, and sectional skeletons. The same authors have also just finished on "The Smaller English House of the Renaissance," in which the course of "middling" dwelling is traced from the time to the accession of Victoria. The illustrated from photographs, drawings, prints. Both books will be issued very by Messrs. B. T. Batsford, Ltd.

Obituary.

We regret to record the death, following operation and short illness, of Mr. C. F. a director of Messrs. Archibald D. D. Sons, Ltd. The late Mr. Chettle entered service of the late Sir Archibald Davidson pupil, after leaving Ardington College. 45 years of age, and was a member Institution of Structural Engineers. many years had taken an active part in management of the Company's affairs.

ARCHITECTURAL COMPETITIONS.

PROFESSIONAL OPINION.

give below the views of a number of leading architects on the subject of architectural competitions. Attention is also drawn to the leading opinion in this issue.

architect who has had much experience in competition work agreed that there was a cause for dissatisfaction with regard to the conduct of competitors, but was reluctant to give opinions for publication unless he was in full of the approval of the Competitions Committee of the R.I.B.A. The attitude taken by this architect is typical of many others and indicates that there is a good deal of unrest never finds public expression.

Mrs. A. W. S. and Kenneth M. B. Cross are in view of the general dissatisfaction with the awards made in several recent competitions, it seemed a pity that the Common Reform Society was no longer in existence. (This Society was one formed some years ago to protect the interests of young architects, and it was subsequently merged in the Competitions Committee of the R.I.B.A.) The speakers thought it might well be remedied. They pointed out that in existing competitions it was very difficult to say anything in criticism of competition awards because they were immediately accused of unprofessional conduct, or of possessing a biased attitude. Unfortunately in this connection criticism could be carried to an extent that it became actually unhealthy and seriously detrimental to the advancement of the art of architecture in this country. But perfectly honest criticism appeared to be unacceptable to many members of the architectural profession, and as an alternative Messrs. Cross suggested that there should be some sort of an Appeal set up to review flagrant cases of unfair awards. Of course, if this were done competitors bringing frivolous complaints to the Court would have to be penalised. There should be no appeal against injustice or in accordance with the spirit of the constitution of our country, and the anomaly in the case of architectural competitions should be right. Turning to the question of the jury, the speakers mentioned three complaints in which the jury system had proved faulty. In the case of the Manchester Art Gallery Competition a Committee of five had been appointed by the R.I.B.A., but the only result had been a statement that no award could be taken because it would cut the basis of the competition system! In this case the whole question turned upon the interpretation of certain conditions of the competition, which, as drafted, were of an absolutely definite nature. It had been argued, however, that the speakers' view was illogically, that conditions of a competition could justifiably be changed if as the result a better plan could be produced. But the conditions of the competition ought to constitute the essence of the contract between the promoters and the competitors; as such they should be rigidly adhered to both by the promoters and their assessors or assessors, and by the competitors themselves. If they were to be changed at will all confidence in the competition system as at present conducted would be destroyed. Generally speaking, Messrs. Cross thought that the conditions should be drafted as far as possible. At present there were usually far too many clauses, and they were often contradictory. Causes of complaint would be, however, considerably lessened if the assessors would make a plan of their own in accordance with the conditions so as to obtain a grasp of the problem to be solved. With regard to the appointing of assessors it was a question whether this duty should not be the responsibility of the whole Council of the R.I.B.A. rather than that of the President alone. Decisions upon any individual were implied, and under the present method of appointment

one was often confronted with the anomaly of an assessor who had never designed a building of the type required judging the designs submitted by men who were specialists. As to limited competitions, it was almost impossible to introduce any kind of control, which however was badly needed, perhaps indeed more badly needed than in open competitions. In all cases the assessor's report, which should comment, however briefly, upon every design submitted to his judgment, should be available at the exhibition of the competitive designs, and extracts from it published in the professional press.

Messrs. Nicholas & Dixon-Spain said that, in their view, if the conditions of the R.I.B.A. be adhered to and the assessor dealt with the matter carefully upon those lines, the result should be satisfactory. Regarding elasticity or otherwise of conditions, they were of opinion that essentials should be "fixed" and a most carefully considered schedule be given; subject to this, the greater the latitude given to competitors, the better within such limits. They were definitely in favour of the single assessor as against a jury. They had confidence in any competent assessor giving a reasonable award. Assessors were, unlike the Pope, fallible. The tendency in some quarters to criticise assessors' awards was perhaps unprofessional, and would tend to make the position of assessors not readily accepted by the most suitable. The modern tendency to $\frac{1}{8}$ in. scale drawings was reasonable, and in large projects the "double-barrelled" basis was good. "Replies" should be sent as promptly as possible to competitors.

Professor A. E. Richardson gave his views under four heads, as follows: (1) It was impossible, he said, to define conditions in drawing up a scheme for a competition which could be interpreted literally by many competitors. In arranging a competition an assessor, or assessors, should make a preliminary plan showing the general arrangement. This could be done after consultation with the promoters of the scheme, and would enable a clear view to be obtained of the feasibility of the building. The arrangement having been ascertained, the programme for the competition should then be framed in general terms, allowing the utmost latitude to the competitors for interpretation, the only governing factor to be closely adhered to being that of cost. (2) From experience, he could say without hesitation that the jury system was infinitely preferable to that of the single assessor. The jury system was a safeguard against the imitation of an assessor's style, or of any attempt to exploit his architectural mannerisms. With a jury, the competitor had a fairer chance, and his design usually received fuller consideration than was the case when a single assessor reviewed the designs. (3) The present system governing the direction of limited competitions was open to many objections; one was the unfortunate tendency to limit the invitation to coterie architects without any reference to the claims of the general profession. This could be remedied by adopting the system of a rota, which should be in the hands of the Council of the R.I.B.A., and members of the Institute should be asked to nominate architects from time to time. Much of the present dissatisfaction would by such means be removed. (4) The assessor or assessors when framing the conditions for a competition, should pay more attention to the competitors, especially where questions of drawing were concerned. Everything should be done to minimise the labour of a competitor, especially in an elementary contest; for example, pencil drawings would illustrate the idea of a building quite as well as drawings elaborately worked out and inked in. The object of a competition was to obtain the best idea for a building, and it could not be said that under present conditions this desirable result was obtained. Neither was it reasonable when conditions were too rigid to expect every competitor to keep within definite limitations other than cost.

Mr. Howard Robertson said the dissatisfaction

which has followed upon the awards in several recent competitions was evidence that the competitive system is still far from perfect. An analysis of complaints seemed to show that they arise (a) from the feeling that the best design had not been selected; (b) from the conviction that the winning design had violated the conditions. As regards (a), the assessor might safely be assumed to be honest and sincere, and the tendency to adopt the jury system was a safeguard against prejudice or preference. As regards (b), there had been many instances of such violations, and it was unfair to expect disappointed competitors to be satisfied, when they lodged complaints in the appropriate quarter, with the remark that the assessor's award was final and binding. The conditions were a contract, and the contract was binding on both parties. He believed that half the difficulties in competition work would disappear if the schedule of requirements was made less binding. In other words, he would suggest that the competition programme be fully detailed, as at present, but that it should be qualified by some such paragraph as the following: "The above schedule represents the accommodation, &c., required, but competitors are at liberty to suggest any alternative arrangements &c., desired." This would allow the competing architect to draft a scheme which might often be superior to the plan roughed out by the assessor or his clients and around which the programme was so often written. The programme stated the requirements, in general terms and even in detail, but the competitor was still left free to provide something better if he could do so. Mr. Robertson understood that in America the programme was less tied up by rigorous conditions than is the case here. He suggested also that every effort be made to reduce unnecessary labour. In cases where $\frac{1}{8}$ in. details were called for, it was surely unnecessary to ask for $\frac{1}{4}$ in. scale elevations when the subject was a large building. The recent Manchester Art Gallery competition, although assessed by an able jury, seemed to have been a failure under the two headings mentioned. It was very easy to criticise and make complaints, but many competitors must have made valuable criticisms and suggestions when voicing their grievances, and if these were tabulated and considered by the R.I.B.A. Competitions Committee they might assist in the formation of a satisfactory system.

Mr. Stanley C. Ramsey (of Messrs. Adshead & Ramsey), said that if the best results were to be obtained from the competition system, competitors should be allowed every possible freedom. Nowadays, with the elaborate instructions and minutely detailed requirements, the assessors themselves virtually designed the building. It would be far better, having determined the main schedule of accommodation to the satisfaction of the promoters, to leave the solution of the problem to the competitors themselves. He believed in the jury system, but in addition to the three professional assessors there should be a fourth member—a layman, representing the building owners. On the general question of competitions, Mr. Ramsey regretted the "post mortem examination" that follows upon almost every competition. Persistent controversy could only end in shaking public confidence in the competition system. Having got architects of standing to act as assessors, he thought that competitors should be content to accept the result in a sporting spirit. Were there not, asked Mr. Ramsey, too many competitions nowadays? He thought that competitions were unnecessary except for the more important buildings. With regard to limited competitions, there ought always to be a qualified architectural assessor, unless the promoters were ready to pay each architect fees equal to the R.I.B.A. scale of charges for sketch designs.

New Art Museum at Naples.

The famous Villa Floridiana, given by Ferdinand IV, King of Naples, to his second wife, the daughter of the Sicilian Duke of Florida, is to be used as a museum, to house the Di Martina collection.

THE ARCHITECT AND HIS CITY.

At last Monday evening's meeting of the R.I.B.A., at 9, Conduit-street, W., Dr. Raymond Unwin, F.R.I.B.A., in the course of a paper on this subject, said he had found in that remarkably interesting rectorial address delivered by the Prime Minister recently some confirmation of the feeling which impelled him (the speaker) to adopt that subject; the feeling that there was need to direct attention to the special sphere of art in city building. For in the fairly full description which the Premier gave of the types of men trained in our Universities, the artist found no place, though there was an allusion to the art of speech. This omission, he feared, was only too representative of a British specialisation which, as regards the sphere of his (the speaker's) work at least, he was convinced we carried too far. Consequently in the councils of our modern city builders, the voice of the artist was too seldom heard; the value of the advice which he might give was too little understood; and the character of the work accomplished was suffering in consequence. Never perhaps (he continued) was the need for dwellings and the other products of industry greater throughout the world than it was to-day; never probably was there so extensive equipment or such latent power of production; yet how difficult seemed the task of applying that immense power to satisfy those urgent needs. Why was this, and why they might well ask should it be recalled now? The reason was that, like our modern cities, industrialism had developed haphazard, lacking order, lacking design. In city building these were the very qualities which it was the function of man's artistic faculty to contribute. He feared the deficiency of that contribution in the sphere of city building was but part of a general neglect. For the industrial age, having smothered man's natural hunger for beauty in a mass of material production, had lost the ability to understand the artistic temperament or to appreciate its proper function in human society.

The temperament called artistic was difficult to define, and frequently misunderstood; it included, in greater or less degree, the imagination to see visions of what might be, the desire to realise them, and the power to give clear expression to them. It constituted one of the most practically valuable gifts with which man could be endowed, if according to the degree and character of the endowment its possessors could be made to play their proper part in the human community.

The full faculties needed for creative work in the fine arts were, however, possessed by very few of those who shared the temperament. Unfortunately, the fact that there were a few who not only saw visions of great beauty, but had the exquisite power of expressing them in so-called works of art, had led to the assumption that these forms of expression were the only ones appropriate for the artist; and that it was the duty of all those who shared the endowment, shunning practical affairs, to seek, however imperfectly, to express themselves in one or other of the fine arts. Hence we saw hundreds of those who had been blessed with some moderate degree of artistic gifts wasting their lives in the production of second-rate pictures or art fancies! Meanwhile the practical affairs of the community lacked the inspiration

and design which their imagination if properly trained might well have been adequate to contribute. It was small wonder that the artists standing or thrust aside from the main streams of life had too often been content to play in the eddies; and at times in mischievous mood to tease the rest of society by persuading them to accept jazz patterns for great paintings, and for statuary human effigies compiled from the child's box of bricks.

The terms artist and practical man represented no complete or scientific division; most men enjoyed in some degree and might learn to use the faculties of both; otherwise where would the architect be? Nevertheless, the terms did represent with sufficient accuracy a specialisation of temperament, of faculty, and of methods of work, the understanding of which was necessary for co-operation between the two types of men, as its appreciation was important for the public. Without attempting exact definition, we associated especially with the artistic temperament or faculty the power to see that which was not there, to call up visions of what might be. An example of method might best illustrate what was meant. The planning of a cottage home was generally thought to be very simple. The ordinary person supposed that the plan was the result of following a few easily learnt rules, coupled with regard for sundry "don'ts"; that a short list of requirements could be made, and that by a system of modification, trial and error, ticking off the points as dealt with, the design could be compiled. These methods had their place, no doubt, but it was not thus that real designs emerged. The truth was that the problem, far from being simple, was as complex as the family life which the dwelling was destined to accommodate. Every room should have its appropriate aspect, size, shape and relation to the other parts of the house. Ready inter-communication must be provided without involving sacrifice of space in the building, loss of comfort in the rooms, or waste of time to its future occupants. Each room in turn must have its door, window, fire, or other parts in right relation and arranged to leave suitable spaces for furniture. All this must be kept within strict limits of cost; and in addition to being convenient in use and comfortable to rest in, the building should be pleasing to look upon; which meant that its mass must set happily on the site, and its colour harmonise with its surroundings; that the plan should be one which would roof well and light well, and that the proportions of all the external parts should so harmonise that the whole design would look well.

It would be realised that in the making of such a design if the place, size or form of any part was modified a score more parts would need to be adjusted to restore the right relation or the balance of the composition; a tedious process, and little likely to succeed on the compilation method. How, then, did the artist work on such a problem? When he came upon the site, as Kipling expressed it, "he made a magic"; and as he intently meditated on the problem there rose before him an image of the cottage that was to be. He saw the spot where it should stand, the form and colour which would best fit into the picture. He saw, too, the opportunities for use and enjoyment which the site afforded and watched the life being lived there. He did not try to remember, one by one, the innumerable "do's" and "don'ts"; for should he be tempted to put the door, window and fire in wrong relations, he would see the cook standing in her own light, or the door swinging irritatingly against the easy chair in which the occupant was trying to read. Instead of the effective compiling of details, the artist held the plastic design suspended in his imagination while he studied it and moulded it, seeing by an instantaneous series of pictures the effect on the exterior view of each internal modification, working the details of plan or elevation with the whole always visible in the back of his mind to help him and check him. This process of design was frequently swift in working, for imagination acted by flashes; but it was not easy, and needed both training and a special

kind of knowledge. To create the pictures mind must be stored with the properties which composed them. The requirements, the conditions and, in this case, the life of the occupants must be so thoroughly and sympathetically understood as to have become almost instinctive equipment.

Referring to town-planning, he thought that in every case there was much preparation to be done; thorough knowledge of that which must precede and be the basis of useful work of that which might be. That knowledge spoke of as the survey; in order that it might be adapted to the designer's method, it should be set out as far as possible in graphic form. It would equally be much to be done after the design had expressed his vision in preparing the design for practical execution. What he urged was that the function of the artist, the stage of design should not be overlooked. Let the preparatory work be as scientific and as complete as might be when the actual planning stage was reached there was need for the imagination of the trained designer to lay hold of the multitudinous conditions, conflicting interests and requirements, and, with a vision of the city life as present as a guide, to appraise them at their relative value. The designer would study the site, picture its opportunities for work, business or for play, and would mould his vision of the ideal city until it satisfied the needs and was itself so harmonised with the natural features of the land, that city and nature became welded into one conception, a complete design. This, it seemed to him, was a special contribution which the artist had to make to city building; he must contribute his vision of what the city might and should be, and translate that vision into the design which it could be realised.

The practical man or engineer, already versed in all the sciences connected with town planning, if he had the necessary artistic faculties, should cultivate them until he became also a designer and creator of beauty. The architect already trained in design might, by the economic and engineering problems which he became also a master of the sciences of the subject. Either might cover the whole field of work if he was possessed of all the necessary powers. But it must be recognised that the work was lavished on few men with such liberality and that the methods of work were so different that the practise of either might render success in the other. The detachment from much detail and the free use of imagination which were essential for the designer might be dangerous for the engineer. The necessary concentration of the constructor on the execution of his detail and the security of each of his edifices might tend to restrict the free use of imagination which was the designer's gift.

Turning to the subject of housing, Dr. Unwin said that, after strenuous and long successful efforts to build enough houses to relieve the shortage, at last one could feel that the problem had been continued on a steadily increasing scale long enough to have acquired considerable momentum, and it became possible to give attention to other aspects of the work than the mere increase of quantity; possible to hope that greater care and attention would be devoted, both centrally and locally, to the wider subject of town-planning. The first war assisted housing scheme spent itself by the end of 1922. That scheme resulted in the building of about 215,000 houses. In 1923, Mr. Chamberlain, the present Minister, introduced the Housing Act, a great effort to stimulate building, under which 122,719 houses had already been completed by October 1st. The number of houses under construction and the number under construction had increased steadily month by month, until over 100,000 were completed in the month of September, and over 70,000 were in course of construction. Under the various schemes of financial assistance by the Government or the local authorities, To these must be added the houses built by private enterprise. During the last period for which there were records they accounted on the average for over 5,700 more per month. Assuming that the rate to have been maintained, a total

houses would have been completed during the month of September. This was city building on a small scale. From returns published in the *Labour Gazette*, this great housing effort was to represent over two-thirds of the value of the buildings of all kinds erected in the building industry. American figures showed this proportion. It was hardly too much to inquire how much of this work had been done by the co-operation of the artist and the practical man. How much of it adorned, and how much disfigured our land? The answer was not easy to find.

It was that he saw inspired him with hope; in many places excellent work was being done; greater freedom had been profitably used. A few of cases where recent housing estates were well laid out and were being covered by houses which in design would bear comparison with our beautiful traditional cottages, in comfort and sanitation far exceeded those which, moreover, did not exceed the average prices, proving that good design, though costly in thought and care, need not be expensive in money. But he saw also much that fell short of this standard, and no little inspired apprehension as to what might be opening in some places! Cases had come to his notice reproducing many of the worst of the nineteenth-century industrial towns—a lay-out devoid of interest or merit, inconvenient and uncomfortable, aspect ugly, north living-rooms and south larders; and as might be expected in such cases, elevations consisting of incongruous features unharmoniously combined.

It ought not to be; it was little better than a waste that we should to-day be using our scarce resources to such ill effect. That we were still be destroying the remaining beauty of our land by development such as described only be regarded as spendthrift extravagance. And what of the wider field of town and regional planning? Here, too, he thought, the lines were favourable for an advance; many of the economic tensions and practical requirements, many of the methods for reconciling conflicting interests having effect to proposals had still to be worked out. Nevertheless, a great deal had been accomplished—309 local authorities were engaged in making town-planning schemes; regional committees were co-ordinating the work of wider areas, covering in all nearly 10,000 square miles. On the basis of the science of town planning so far evolved, plans were being made. Whether that basis had or had not reached something of final form, it was equally important that the imagination of the artist should play its part in forming these plans. He did not complain that since 1909 we had directed our main attention on the practical problems which had to be dealt with, much less that the labour on these problems should be neglected; the method was natural to us as it was to them, and it was a good method; it was one, however, which had been found very helpful in countries whose natural methods were different. But it was not the whole; and he suggested that the time was now ripe when the art with real economy add a little more to the vision, more of the design which led to greater beauty than we had hitherto put in our plans. He said this the more so because some of the work already done was proving that order and design, in their relation, were not valuable only for their contributions to beauty, but that without even the practical utilities might break down. The road junction which merely provided straight lines for the traffic on plan, when built, did not prove confusing to the human mind, but of such order, such symmetry, such beauty in the forms of the sites, and the groups of buildings as would explain the junction to approaching drivers. Some people always said that art or design consisted in sacrifice of important practical considerations for the mere appearance. On the contrary, the art of art, of design, too often meant the only supremely important con-

siderations to a few petty practical details; as when all that made a place worth living in was destroyed for the practical advantage of crowding a few more people into it! No such natural conflict, in fact, existed; the practical and the artistic were two aspects of one purpose, and both were equally necessary to successful attainment; without the other each alike was maimed.

It was natural and well that all young architects should aspire to play a distinguished role in their profession, to design the greater buildings for which monumental character was appropriate. But even that more distinguished work must in the long run depend on the appreciation of the public; and he suggested that house building, which far outweighed all other branches of work in volume and in value, also exceeded it in the influence which it exerted on the minds of the people, and in the extent to which it might contribute to or ruin the beauty of cities. That eminence might be reached in this work needed no proof in the presence of their honoured President; that lasting fame might also be found, the names of the brothers Adam testified. If there was even a measure of truth in his view that this approach to architecture from the dwelling was best for the architect, and that the interest and appreciation of the people could best be stirred in their home whence it would spread in widening areas until it embraced the whole town, then he suggested that in our architectural training greater emphasis might be laid on this work. Let every student study the life of the home and learn to plan and design the small house thoroughly; let him follow this with some study of the combination of small houses into buildings composed of two, three, four, or more dwellings, and the further combining of these larger units both in plan and elevation into more extensive groups, developing by the arrangement architectural relations and unity, in harmony with the contour or other features of the ground. This afforded a truly fascinating field of design which few had yet explored, and fewer mastered. From this he would proceed to the development of sites and their relation to the town plan; when in due course he came to exercises in monumental design he would at least have some idea of their place in the city, and the background against which they should stand.

Referring to ways in which architects could help to preserve the beauty of cities, Dr. Unwin said that in one town excellent work was being done. The resident architects formed a panel under the leadership of one of their number who acted as consultant to them and to the town council, co-ordinating their work and advising the authorities. He apportioned the building among them, himself doing no building, but co-operating with the authority and their engineer in the town or site planning. From the high average of work resulting, he judged the arrangement to have no small educational value for the architects, as it certainly conferred much benefit on the city. There were many ways in which this influence might extend. The first and the one most under their control was a thorough knowledge of the work and what was required. That was not all; but he said to the younger architects and the students, if they would so qualify that they could do this work sufficiently well, there was to-day a better chance than had existed for many a year, that the opportunity to work towards the improvements of the homes and the beautifying of the city would come to those who were ready for it. It could hardly be doubted that we were entering a period of planning and co-ordination of work in many spheres, a period when he believed the architect and the designer would have an opportunity to strike out from the eddies into the main stream of life and play a more important and a more worthy part than they had often played in the recent past.

Discussion.

Mr. G. L. Pepler, proposing a vote of thanks, said that architects and town planners, if they were to be successful, must have public opinion behind them. The public must be made to realise the absolute necessity of saving the

beautiful countryside. It was necessary to make clear to the public in a graphic way the forces at the basis of the town-planning movement, so that they should see the necessity of accepting the solution offered. There was much work for architects to do in the matter of graphic representation. They should start with the ideal. If they began by considering the difficulties they would not get anywhere, and the plan would be makeshift and patchwork.

The Very Rev. the Dean of Canterbury seconded the vote of thanks, and referred to the many problems of the nature touched upon by Dr. Unwin that had to be dealt with in the Canterbury neighbourhood in connection with the industrial development of East Kent. The speaker pointed to the example set by Stockholm, with its many fine buildings, beautiful streets and dwelling houses, and entire absence of slums.

Professor S. D. Adshad, supporting the vote of thanks, said he would like to see more attention paid to the architectural value of important road crossings and connections. It was the buildings that made places, and not the lines of the roads. He regretted to see small builders monopolising enormously potential building sites in a way that must be an aggravation to the general public for years to come. We ought to make the control of building operations as strict as possible. If we did not reserve the beautiful parts of the country while they were yet unspoiled, it would be an everlasting reproach upon the early days of town planning.

Mr. I. G. Gibbon, C.B.E., said that though he admired Dr. Unwin's address, he had to insinuate a few doubts. The terms "artistic temperament" and "design"—what did they mean? Did they mean anything more than merely constructive imagination? That quality was not the monopoly of the so-called artistic temperament. Constructive imagination was just as necessary to the Ford car and to the man who made it. He thought that our problem was one rather for the social economist, who might, of course, be either an engineer or an architect, but he (the speaker) would have more confidence in architects if he saw in them more evidence of a power to group their buildings.

Col. C. H. Brassey (Ministry of Transport) complained that some of the new garden suburbs were very confusing through being laid out on the principle of the Chinese garden.

Mr. W. R. Davidge said he hoped that Dr. Unwin's influence might be brought to bear upon the by-law department to prevent the beautiful spots of the countryside from being desecrated. Town planning was nowadays largely confined to the plan, but it was essential that the town planner should control and co-ordinate the buildings to be erected on that plan.

Mr. Ebenezer Howard said that manufacturers appreciated the cost of wasteful transport in connection with their businesses, but failed to see the same thing as it applied to their employees.

Mr. Edward Warren said he failed to see why so much county money should be devoted, as it was in Berkshire, to devices for enabling motorists to rush about the country at a great speed, nor why fine old buildings should be sacrificed to that modern Juggernaut, the motor car.

Mr. Gilbert Jenkins said it might be asked whether it was a good plan to spread garden suburbs all over the countryside. It might become necessary to compel people to live in flats to prevent the countryside from being covered over.

Major Corlette said there were vast open areas throughout the Empire waiting to be peopled. It was possible to pull down the slums and make garden cities in the middle of London.

The President (Mr. Dawber) said that the planning of suburban development was often good, but the buildings were sometimes a disgrace to modern architecture. The public needed to be educated, but so did architects and public officials.

Dr. Unwin briefly replied.

ILLUSTRATIONS

Bank of England Dining Club, Tokenhouse Yard.

This building occupies the site of the old Auction Mart, Tokenhouse Yard. The Auction Mart, built in 1864 from plans by Mr. G. Somers Clarke, was regarded at the time as an innovation in City building; in some respects, it was certainly in advance of what was being done at that date. The site lies almost right over the course of the ancient Walbrook, and instead of attempting to carry down the walls to a great depth to secure a solid foundation, the architect chose to build on a concrete raft covering the whole area of the site. The walls were very substantial—some of them over 3 ft. thick to their full height. The floors were carried on heavy built-up wrought-iron girders—a material then only beginning to be used in ordinary building work. On these were laid timber floor joists filled in for part of their depth with concrete. Externally, the walls were of Portland stone, with very elaborate carved bands, mouldings, architraves and cornices, the bulk of which were in red Mansfield. The staircase was of stone and the rooms on the principal floors were large and lofty. In the rebuilding scheme for the Bank of England it has been arranged to utilise most of the sub-basement walls and the concrete raft on which these rest; but as much greater floor space was required for dining rooms, kitchen, and stores of the restaurant, this has been secured by introducing one additional floor in the height occupied by the lofty Auction Rooms, and adding two more above. By taking full advantage of modern steel-frame construction, hollow tube flooring, and thinner walls, the total weight of the new and enlarged structure remains the same as before, and makes it possible to carry the larger building on the existing concrete raft. The new building is being faced with Portland stone on a granite base. In certain parts which overlook the old churchyard of St. Margaret's, Lothbury, it has been found possible to re-use the old Portland stone ashlar facing of the Auction Mart.

St. Mary's College, Strawberry Hill.

St. Mary's College was erected at Brook Green, Hammersmith, in 1850, for the training of teachers for Catholic elementary schools, and served that purpose for seventy-five years. Owing to the increase in the number of students and to the need of better grounds for games, the Catholic Education Council decided to part with their building and acquire larger premises elsewhere. Twickenham was chosen with the approval of the Board of Education, and some thirty acres were purchased from the Dowager Lady Michelham, the site including "The Mansion," Strawberry Hill, which consists of the villa built by Horace Walpole in the middle of the eighteenth century, and the considerable additions made to it by the Countess Waldegrave a hundred years later. The Catholic Education Council wished to keep these buildings unchanged if possible; so the villa has been repaired and assigned for the use of the resident teaching staff, and the subsequent additions adapted for the service of the College, the old ball-room being reserved as an assembly room

for the students. The new buildings, which have been erected to the south of the existing ones, in order to preserve the amenities of the site, with its splendid lawns, comprise, on the ground floor, the refectory, chapel, class-rooms, and common-rooms; while the upper floors are devoted to the bed-sitting rooms of the students. The materials used in the construction are London stocks with Bath stone dressings and Welsh slates, the flat roofs being laid with vulcanite by Vulcanite, Ltd. Water for the use of the students is laid on in every room. The contractors are Messrs. L. H. & R. Roberts, of Lower Clapton-road, E.; and the sub-contractors are as follows: T. Webster, Ltd., plastering; Williams, Smith & Evans, slating; Newsome & Co., glazing; Acme Flooring & Paving Co., wood blocks; Musgrave & Co., sanitary fittings; and Waygood-Otis & Co., lifts. The contractors for the repairs to the older buildings are Messrs. Messom & Sons, of Twickenham; all the work has been carried out under the supervision of the architects for the College, Messrs. Pugin & Pugin, of London and Liverpool.

H.B.M. Legation, Montevideo.

The new Legation building will be erected on a recently purchased site containing an area of 2,850 square metres. The ground faces the new "Parque de los Aliados," now in course of formation. The position has the advantage of an open aspect with views from two road frontages, and for official residential purposes it is conveniently near to the city. Rented office accommodation is provided in the business quarter, a district unsuitable for an official residence for the Minister. The accommodation to be provided in the new Legation will therefore be almost entirely residential, with adequate reception rooms for entertaining purposes. Business rooms will be provided for the Minister and a secretary. The site affords space for a small garden with a tennis court at the back, and a garage with chauffeurs' quarters will be provided. The building will be of fire-resisting construction with reinforced concrete foundations; and the façades will be finished in white Portland cement. Arrangements are now being made for tenders to be obtained, and it is hoped that the building will be in progress shortly. The architect for the work is Mr. R. J. Allison, C.B.E., F.R.I.B.A., Chief Architect, H.M. Office of Works.

Suggested Designs for New L.C.C. Tenements.

The earlier tenement buildings erected by the L.C.C. were planned so that there was separate access to every room, and each flat was provided with a separate bathroom. The provision of separate access to the rooms meant a certain loss in room space, and in the case of the three-story flats it was decided to do away with internal corridors and to provide rooms inter-communicating. This type of planning is now the normal and is applied in the case of the proposed new buildings recently designed by Mr. G. Topham Forrest, and illustrated in this issue. One of these shows a block suggested for an area in East London. It has been designed in a rather freer manner than is usually the case. The other illustration shows the suggestion for some experimental blocks of tenement dwellings of novel design both in construction and in the character of the accommodation provided. A special type of steel and concrete construction has been designed by which brickwork can be dispensed with, and which is based on the utmost economy of material compatible with stability, weather-proofness, and protection from extremes of heat and cold. As regards the character of the accommodation, the Council proposes in connection with this experiment in construction to provide accommodation which will be intermediate between that provided in the common lodging-house and in the self-contained tenement occupied by the more prosperous class of worker. A small proportion of the lettings would be of the bed-sitting-room type suitable for the accommodation of single persons and aged couples. The rooms would be equipped like an ordinary living room and would have, in addition, a metal bedstead which, during the daytime, could be shut up in a ventilated recess.

War Memorial Annexe, Liverpool Homes for Aged Mariners.

This building has been erected by the Mersey Marine Service Association at the Home for Aged Seamen, Egremont, to provide dormitories for twenty-four men. It is connected at north end of the main building by a corridor to balance a generally similar annexe to the south. The completed buildings form a prominent feature of the riverside, character and proportions of the new work determined by the necessity for harmony with the existing premises of Victorian character. Ample accommodation in spacious dormitories is provided, the divisions being kept clear of the floor for cleanliness and ventilation. The building is fitted with every convenience for the comfort of its inmates and is fire-resisting throughout. The general contractors were Messrs. J. A. Milestone & Ltd., Wallasey. Among the sub-contractors were Killick & Cochran, Liverpool, heating hot water; Rea Metal Casements, Ltd., Liverpool, casements and leaded glass; Cheswallasey, electric lighting. The building was opened by Admiral Earl Jellicoe of Scapa on October 23, when a memorial tablet was unveiled by him. This memorial was supplied by Messrs. E. A. Clark, Ltd., Liverpool, to the design of the architects, Messrs. Lewis & Smith, of Liverpool. The cost of this work has been defrayed by public subscription and donations. The Mersey Marine Service Association rely entirely on the generosity of the public to enable them to carry out their beneficent work on behalf of seamen in general and aged sailors and their widows at the Homes, Egremont.

The Manor House Hospital, Liverpool Homes for Aged Mariners and Widows of Seamen.

This late Georgian mansion has been converted into an infirmary for aged mariners and widows of seamen. It stands at the north angle of the estate and faces the River Mersey from which it is to some extent screened by trees. The problem of conversion into an infirmary has been overcome by the addition of a ward for nine women on the south side of the building, with all necessary bath accommodation on the ground floor. The existing building provides many rooms, which have been adapted to their present purposes for staff, sitting-rooms and kitchen accommodation on the ground floor. On the first floor are wards for fourteen men with lavatory accommodation over the wards, staff bedrooms, and accommodation on the second floor of the building provides service bedrooms, &c. The hospital has been carefully fitted up with all modern conveniences, a new installation and electric lighting. The same of the old building have been carefully preserved and the new additions kept in harmony with them. The main entrance to the hospital is marked by a memorial tablet to record the generosity of Mr. Andrew Gibson, J.P., who has borne the whole cost of the work, and the opening of the building for its beneficent purposes by Admiral Earl Jellicoe of Scapa. The premises have been enlarged and reconditioned by Mr. John Crowhurst, of Birkenhead, the contractor, under the supervision of Messrs. Lewis & Smith, architects, of Liverpool. The general view of the Homes for Aged Mariners (p. 736) shows the Manor House Hospital at the right, the left facing the river and the War Memorial Annexe on the left-hand side of the picture, the building in the centre of the picture.

Venice Yard House and Mayfere House, Grosvenor Square, Westminster.

These houses are of the non-basement type and each has the dining-room on the ground floor, together with the service quarters at the back. The sitting-rooms are arranged on the first floor; and the bedrooms, &c., on the two upper floors. The façades are faced with thin Dutch bricks, and the quoins and window surrounds are of cheery red English bricks. The roofs are covered with sand-faced tiles. The buildings were Messrs. Holliday & Greenwood, Mr. W. Hill, F.R.I.B.A., was the architect.

SOCIETIES AND INSTITUTIONS

R.I.B.A.

Following are notes from the Minutes of the Council meeting, held on November 2 :—

Waterloo Bridge.—It was decided to send to the London County Council the letters received from the President of the American Institute of Architects and the Franco-British Union of Architects on the subject of the preservation of the Bridge.

Cambridge School of Architecture.—Six drawings of a Terminal Railway Station by the late J. M. Whitelaw (Soane Medallist, 1913) were presented to the Cambridge School.

The Board of Architectural Education.—A comprehensive scheme for the reconstitution and enlargement of the Board of Architectural Education was approved by the Council and will be brought into operation forthwith. (Details of this were published in our last issue.)

R.I.B.A. Examinations.—On the recommendation of the Board of Architectural Education it was decided : 1, To require students entering courses recognised by the R.I.B.A. to become registered as Probationers immediately upon entering such courses ; 2, to urge upon students the extreme importance of availing themselves, when they become eligible, of exemption from the R.I.B.A. Intermediate Examination and subsequent registration as Students R.I.B.A. ; 3, to urge students eligible for exemption from the R.I.B.A. Final Examination to sit for the R.I.B.A. Examination in Professional Practice and thus qualify themselves under the usual conditions for candidature as Associates.

R.I.B.A. Visiting Board.—The reports of the Visiting Board on the following schools were accepted by the Council :—1, Birmingham ; 2, University of Sheffield ; 3, Armstrong College, Newcastle-upon-Tyne ; 4, Leeds School of Art.

"The Architect and His Work."—A pamphlet entitled "The Architect and His Work," prepared by the Practice Standing Committee, is to be published forthwith.

Qualified Architects and Housing Schemes.—Steps are to be taken to call the attention of the Minister of Health to the failure of local authorities to employ qualified architects in connection with their housing schemes and to urge him to take steps to ensure that in future only qualified architects are employed on this work.

Restrictions on Tendering.—Particulars of the decision on this subject were given in our issue for November 6.

The Architects' Benevolent Society.—A grant of £100 was made to this Society.

The British Waterworks Association.—Mr. H. D. Searles-Wood and Mr. P. M. Fraser were re-appointed to represent the R.I.B.A. on the Standing Committee on Water Regulations.

The British Engineering Standards Association.—The following were appointed to represent the R.I.B.A. :—Sectional Committee, 15/- on Vitrified Ware Pipes : Mr. D. R. Tucker. Sub-Committee, 1½/- on Cast Iron, Half-Round, O.G. and other Moulded Gutters : Mr. C. F. Skipper, Mr. Max Clarke. Sectional Committee, 32/- on Sand-Lime Bricks : Mr. T. Wallis, Mr. H. D. Searles-Wood. Sub-Committee, 32/1 Materials and Manufacture : Mr. T. Wallis, Mr. H. D. Searles-Wood.

Membership of the R.I.B.A.—The resignations of the following members were accepted with regret :—F. S. Baker (F.), V. A. Lawson (L.). The following were reinstated as members of the R.I.B.A. :—W. S. R. Bloomfield as Associate, R. T. Tilley as Licentiate.

MODERN TOWN GROWTH.

Lecturing on this subject at Birmingham University, Mr. William Haywood, F.R.I.B.A., said that industrial towns of to-day had not the definition of form so apparent in towns of the past. Old cities were closely massed to simplify defence, and they had little of that irregularity of growth which in a modern town often extended far beyond its parliamentary boundaries. A misleading conception of modern town conditions was given by maps which defined administrative areas as independent units. Such maps were

apt to convey wrong notions of town-planning problems, which were so closely related to adjoining areas that town planning was now generally associated with regional planning in order that all matters of mutual interest might be adjusted by agreement among neighbouring authorities. This fusing of urban interests was best shown on the latest density maps of the Royal Geographical Society ; especially with respect to Lancashire, where Liverpool, Manchester and the towns between formed one great belt of boroughs, the mutual problems of which needed joint agreement.

That section of town planning which dealt with the removal of slums inherited from the first half of the nineteenth century was thought by some reformers to be best cancelled in favour of new communities or garden cities, artificially limited in extent to 30,000 or 50,000 inhabitants, and built on land owned jointly by their citizens, or held in trust for purchase by them at their convenience. Garden city policy opposed the evils of overcrowding, the exploitation of land values, and the growth of great cities, by substituting fully detached, self-supporting and healthy communities as satellites of great towns, separated from the parent cities by park belts, yet effectively associated with them by rapid transport services. The real merits of this policy were such that it was in some danger of being regarded as a panacea. Its advocates were apt to regard great cities as always unhealthy and undesirable ; whereas such evils were the natural legacy of a period which knew nothing of modern town planning, by virtue of which great towns might be as agreeable and healthy as small ones.

There were social, educational and architectural possibilities in great towns which garden cities must always lack ; for it was unlikely that the small cities of the past which were eminent in these respects could have any counterpart to-day. Athens was a small city, but it was also a State, and the home of a world power. There was great need for garden cities, but there was need also for great towns from which congestion and slums had been removed, and in which certain deficiencies had been made good. English cities were still backward in the provision of facilities for organised recreation in congested areas. Beginnings had been made here and there ; but so far as adult recreation was concerned, our brewers had been quick to see the need, and, out of their huge profits, had anticipated the municipal authority. Public-houses had been built recently in different parts of the city which possessed practically all the accommodation necessary for a type of recreation which—together with children's playgrounds—should be almost a municipal monopoly, systematically allocated throughout the built-up parts of the town, and brought into its structure as inseparable from a complete expression of civic life.

WESTMINSTER HALL ROOF.

At the premises of the Royal Society of Arts, 18, John-street, Adelphi, on Friday last, under the chairmanship of Sir Wm. Bull, Sir Frank Baines, Director of Works, gave a lantern lecture on the roof of Westminster Hall. He commenced by giving a brief history of the Hall, which was originally built for William Rufus between 1097 and 1099. It was believed, he said, that the roof trusses of this first hall did not span its width in one piece, but were conjectured to have had two intermediate lines of posts upholding it, thus dividing the hall into a centre "nave" and two side aisles. This stood for nearly three centuries, until 1394, when Richard appointed John Gednes, Clerk of Works, to rebuild it ; the master carpenter employed was a man named Hugh Herland. In those days foremen and workmen were given no plans, but made their own measurements and set to work by themselves. Herland designed the roof and built it, to all intents and purposes, personally. It was safe to say that it was the most wonderful

timber roof in the world ; the whole thing incomparably fine, both in conception and execution. It was carried out on an immense scale, for the hall is 290 ft. long, 69 ft. wide, has a capacity of a million cubic feet. The beams used had to be big in comparison with the upper collar beam, for example, weighed 10 tons. And although practically every beam suffered from the ravages of the Death Beetle—some had left as little as 1½ in. of the original 24, and many pins were broken—the roof still remained in position after over five centuries—a truly marvellous statical scheme. The touch of a genius was evidenced by Herland's carving of the figure of an angel on the hammer beams, airily supporting the mighty posts.

The decay and repair of the roof were illustrated by a series of slides, which showed how the beetle had made on the roof over two-thirds of the original timber had gone. When the great arch cracked and the whole roof settled 22½ in., the wooden beams acted as levers to the distortion. To prevent further ravages, every member of the roof had been sprayed with a solution that was believed to be an effective deterrent, and this spray would be repeated from time to time.

Previous repair had been ineffective. Sir Charles Barry had put steel shoes at the joints of the principal rafters and the hammer beams, and 2½ in. rods to supplement the trusses. This had proved futile and had upset the equilibrium of the roof. The lecturer pointed out that his own preservation work the roof was no more like Herland's original than it had ever been before. The timber itself was still functional, and the distortion was left to speak of the roof had stood. It had been objected that the use of steelwork was inappropriate, without it 90 per cent. of the old work the timber would have had to be replaced. The work had been done in such a way, however, that no steel was visible from below—none of the 98 tons of steel construction obtruded on sight. In conclusion, said the lecturer, the thought of the roof of this structure of no importance was good for another 500 years.

ST. PETER AND THE POPES.

A history of the building of the world-famous architectural group, St. Peter's Cathedral, at the Vatican, was given in a lecture by Sir Banister Fletcher, at the Central School of Arts and Crafts on November 4. On the return of the Popes from Avignon, said Sir Banister, the Vatican was a city of ruins and ripe for the action of the Renaissance. Only one Gothic church had been built, and the basilican church was neglected and decaying. Martin V began to repair the desolation, but it was reserved for a later Pope to initiate the building of the Vatican's great cathedral. The site was not unlike the pagan tradition and Christian use in the Vatican hollow of the Janiculum, the fabled shrine of Etruscan "vates" or seers, there had been first the oratory of a saint, then a basilican church built by an Emperor for a Pope, and lastly rose the cathedral of the Renaissance.

In 1506, under Julius II, Bramante started a gigantic plan with four great piers for the dome at the centre of his Greek cross. In his succession came Raphael, Peruzzi, Sangallo, and Giulio-Romano, with their various designs, but in 1546 the great Michelangelo returned to the plan of the Greek Cross and began the dome. Again, after Giacomo della Porta and Vignola, whose cupolas gave scale to the dome, Carlo Maderna, with his lengthened nave and unpleasing façade, both of which dwarfed the soaring dome. Thus through successive centuries the building grew, and the old continuing it was handed on as a heritage from Pope to Pope, who, each in turn, employed architects. It was, said the lecturer, difficult to estimate in terms of ordinary building designs, proportions, and construction the extraordinary building. "It overawes by size ; it awes rather than attracts ; it impresses by magnitude rather than by splendour. There is everywhere a baffling absence of detail and this is nowhere better realised than in the chapels, large as independent churches

THE TOWN-PLANNING INSTITUTE

ESSOR PATRICK ABERCROMBIE presided at the first meeting of the current session of the Town-Planning Institute, at 92, Victoria-street, S.W., on Friday last. He took as the subject for his address "The Extension of the Planning Spirit," and said it was not what everyone would agree as to what the actual extent of the sphere over which to-day the spirit of town planning should be inclined to say that its boundaries were dictated by the powers of existing Acts, but that as they had been recently, and were being extended as to built-up areas by the Public Health Act of this year. The spirit of the spirit, they would continue, would be manifested in more authorities making use of these powers, making use of them more quickly and more effectively: in a word, the sphere of town planning was clearly being extended; what was now wanted was rather the cultivation of this wide field than the extension of its boundaries. There was much to be said for this view. The number of local authorities who had had schemes finally approved by the Ministry of Health was still only 85, when more authorities had submitted schemes and were awaiting their sanction, 119 in all 19 authorities and 26 schemes. It did not seem a large number out of the 1,000 authorities in England and Wales who had prepared schemes, and of the 240 authorities who had a population of 20,000 and over, who had submitted schemes by the beginning of the year 1929. At the same time, the number of Preliminary Statements which have been submitted, numbering nearly 100, was much more encouraging; half of these statements had been approved and as the practice had been towards making the Preliminary Statements almost indistinguishable (on plan) from the final Scheme, there were therefore about 50 town-planning schemes practically finished, involving 85 local authorities and 287,297 inhabitants. This indicates no inconsiderable expenditure of technical energy, but there was a very terrifying amount of work to be got done if these schemes were to be ready by the year 1929. It had been sometimes suggested that many of the schemes lacked imagination. This might be true, but at the same time it was, perhaps, somewhat unfair. Town planning, like architecture (but unlike sculpture or painting, which were not practical) must or should be carried on whether a scheme arose to do it or not, or whether the town who was doing it felt inspired at that time or not. Towns must grow: plans must be made to satisfy Ministers of Health: a scheme could not be had to order, and some places were incapable of lofty schemes, as some people were securely humdrum. Provided such areas rose to a high standard of level of decency they should not be disappointed; but to meet even this demand there should be a steady stream of young town planners turned out from their various educational establishments equipped with the knowledge that could only be gained by specialised training. The Ministry's Report notes that the increase in the past year has been larger among authorities upon which town planning is not compulsory; this voluntary submission surely indicates an extension of the spirit, and was probably due in some degree to the operation of regional committees, the rural authorities being as urban of which were urged to pass the motions. But he was afraid here there was a danger of "Fainté" schemes. Would such schemes ever come to fruition? They could work and pray for the extension of the town-planning spirit to inspire these rural areas and especially their councils.

In addition to this normal town planning, there was also the sphere of regional work which had so widely extended its influence in the past few years. Here it was a question of the influence of the effect produced. Sometimes it was inclined to feel that it would be well

if the main lines of a regional plan could be embodied in a special Act or if a regional scheme (apart from a joint town-planning scheme) were made possible under amended legislation; for sooner or later regional rating would be found essential for complete realisation.

Then there is the development plan, including as it did the replanning of built-upon areas, a subject which they had specially set aside for discussion during this session. How many towns really possessed a plan or a policy of growth? How many had settled what was to be done with their slum areas when they were cleared—what ultimate density for their population they were going to aim at; what was to be their zoning aim? At best many of them had not gone beyond a road plan. There was scope for the whole of the brains of the Institute to be let loose on their industrial towns for the next few years.

While they were extending their dominions, there was a danger that they might be losing ground where they thought that town-planning influence was completely entrenched. He meant in the site planning of residential areas. Not, perhaps, so much in actual planning, although some faint echoes of the by-law suburb were to be heard in the land, as in the make-up and width of streets. One of the spectacular triumphs of town planning in the past was the break-up of the standardised road. Highway committees had looked on sourly at the laudable efforts of housing committees to cheapen municipal schemes, and now, when private enterprise was returning and the private citizen was inclined to buy his own house and was forced to make his own road in front of it, they saw a chance of returning to the old expensive standards. The spirit of town planning must re-assert its dominion over this ground if it was in danger of being lost.

These were the recognised haunts of the spirit of town planning, and many would say that there was ample scope for an extension of their influence within this established periphery. But just as Churches felt impelled to missionise abroad before they had wholly converted their native inhabitants, so should the Institute aim at shedding its beneficent light ever further afield. But for what did this spirit, when disengaged from its bodily envelope of technical town planning, stand? It was not merely having a plan based upon the requirements of a programme. It was with them not only a plan, but an organic plan. The town planner, unless he envisaged growth, was lost—his scheme must possess an élan vital or it was still-born. The essential quality of such growth was clearly harmony, which alone distinguished growth according to plan from haphazard accretion. A programme of requirements upon which was based an organic plan leading to a process of harmonious development—all this was included in the expression "The Town-Planning Spirit."

Could it usefully be extended to new spheres? What of industrial planning? The arrangement of the factory proper was surely the last word in economy and local efficiency; but in the case of one of these industries which, like town planning, could only gradually realise their full stature, did they always see this adherence to a far-seeing plan? Was there not sometimes apparent a sort of hand-to-mouth slap-dash haphazard? The detailed planning of industrial zones was one of the gravest problems before town planners to-day. What was required was first a collection of data of factory and warehouse requirements, and then an exhaustive research into their existing and possible combinations. Had anything been done since Mr. Gaunt read his paper with its wealth of suggestion based upon his unique experience at Trafford Park and Letchworth?

There was next the consideration of harmony in street design. They could watch any day in Regent-street a group of architects—some of the foremost in this country—performing a series of acrobatic tricks in stone, each attempt-

ing to outdo the other with an ingenuity and verve worthy of a better cause. No music-hall audience would tolerate for a moment an individualistic display of so many mutually destructive artists, appearing simultaneously. Complete harmony and ensemble playing was required by the public in its amusements. In the Middle Ages, at the Renaissance, and when Nash planned Regent-street, there was a kind of natural feeling for harmonious design. Examine the picturesque towns of Belgium or South Germany, and they would find the points of emphasis were unerringly made by gable or tower, just as they were later by formal pediment or monumental arch. There was no such rightness about much of the modern effort—the buildings might for the most part have been equally well designed for anywhere else. What was the explanation? It could only be that the modern architect and his public had yet to be inoculated with the spirit (or should he say bacillus?) of civic design. The architect (*pur sang*) had not yet advanced beyond the stage of social development of the speculative builder of 40 years ago, who used to lay out his own building plot with sublime unconcern for that of his neighbour. It was the æsthetic result which was paramount here; yet on mere economic grounds was not associated design an advantage? Each single building appeared to need the emphasis of giant columns, sculptured bands, recessed fronts and corner domes in order to make it hold its own in the general uproar. He asserted, however, that Nash and his associates' lower buildings in humble stucco, cream painted, produced quietly a more imposing effect by reason of the continuity of his street picture and the sparing use of points of emphasis. The modern spirit of civic design did not in any sense demand a prescribed and hard uniformity; it was a spontaneous social co-ordination that they wanted allowing play to human interests, and not the regimented subservience of aristocratic control visible in the Rue de Rivoli.

The countryside was an even more pressing problem. After all, their towns were already mostly ugly; but the country was still beautiful and was therefore in greater danger. What they lack here was any system at all of landscape design, not as applied to open spaces and parks (a comparatively easy matter), but to the ordinary countryside in which change was taking place. It ought to be and was possible for a stretch of country to absorb a large amount of building without losing its natural character, or at any rate without destroying its beauty, though its character might be modified. Where could they turn for any guidance in this matter?

Now the Chinese long ago reduced this development of landscape to a definite system of æsthetics known as Feng Shui. This had been described as the science of "adapting the residence of the living and the dead so as to co-operate and harmonise with the local currents of the cosmic breath." It was thus lifted on to the highest plane; it is related on the one hand to the Chinese pre-occupation with the fact that man is merely a temporarily detached and animated fragment of the earth, soon to return to it; and, on the other, to their intense veneration for natural scenery and especially lofty mountains. The word Feng Shui actually meant Windwater, for it was considered (and justly) that the ultimate forms assumed by mountains and valleys was the outcome of the moulding influence of wind and water; but this notion had been immensely amplified so that "at every place there are special topographical features (natural or artificial) which indicate or modify the universal spiritual breath." Thus the alterations of natural forms by human intrusions had a good or bad effect according to the new forms produced. Infringements of these rules or neglect of their study are punished sometimes by Nature, other times by man. Water, the archetype of humility, because it always sought the lowest place, would resent interference with its natural bent, and as the humble could lose their tempers, it would rage forth from confinement, as happened so disastrously at Dolgarrog. What would be the Chinese moralisation to be

drawn from this? That in establishing a village at the bottom of the valley and in the very pathway of the water, the projectors had given insufficient study to Feng Shui, or wind-water. This mistake could never have been made in China. The professor of Feng Shui, whose job it was to study and expound the forms which the spiritual forces of nature had produced and to prescribe the ways in which all buildings, roads, bridges, canals, and railways must conform to them was in a stronger position than the English town planner. He had the people behind him—they had to persuade the people to back them up. But whether they based their aesthetic upon Chinese premises or not, there was need for them to give much more study to this rural development problem than they had done in the past. Their maturely developed countryside was in many places undergoing a sudden change; many causes have been at work, such as the ceaseless efforts of propagandists towards industrial and residential decentralisation; the desire of the family man to own a small house and garden; and the return to the road method of population distribution after three-quarters of a century of railway travel. However much the decentralisationists were satisfied to see the satellite village and suburb springing up everywhere, the sociologist and town planner realised that they had been caught unawares. Vast areas of the countryside were being colonised with little more rationale of social grouping or economies of estate development or aesthetics of country planning than existed during the industrial revolution of last century. The Town-Planning Acts only partially helped; the restriction of density of houses, that potent engine of urban reform, was of no avail here—houses were too loose rather than too dense; the submission of plans of estate development was not of much use when it was only a question of stringing bungalows and cottages along the frontages of existing roads. The restriction of wide areas to agriculture and the stimulation of building activity at chosen spots would seem to be the things to do, but how to do them was another matter. Where the country change was due to some local natural cause, such as the discovery of coal or ironstone, the practical aspect of the problem became more defined, and, they trust, is capable of solution under regional planning.

Finally, there was one department in which, fortunately, the town-planning spirit had been long at home, but not sufficiently occupied—he alluded to the preparation of the programme of requirements for a town or region—in other words, a Civic Survey. Before the town-planning spirit had breathed life into it this was a dead corpse of statistical matter. It was Professor Geddes who saw that they must appeal to the eye as well as to the mind, and that the pictorial appeal was much quicker than the written word. And that by reason of this swiftness of assimilation it was possible to compare different aspects of civic or country life which formerly had been held apart by impenetrable partitions. There was no need to labour this field for their energies. Map-maker was first cousin to plan-maker, and it was essential that the man who was to make the plan of growth should have a hand or say in the maps that were prepared to show existing conditions. A number of these Civic Surveys had been prepared and published. The latest to appear in book form had just arrived from Dublin, prepared by Mr. Horace O'Rourke. This was a splendid volume, a noble result of town-planning effort directed to this end. Would that their other capital cities—London and Edinburgh—possessed similar surveys available to every citizen!

SIR R. PAGE proposed a vote of thanks to the President, and pointed out that there was need to impress on the public that nearly all the evils in life—slums, housing shortage, destruction of amenities and inconvenience of daily travel—were due to failing to town plan in the past.

MR. M. HARRIS seconded the motion and it was carried.

MR. C. C. READE gave some details of the steps being taken in the Malay States to provide for town planning, and emphasised the point of how important it is that town planning should be developed in the Dominions overseas.

DISPUTABLE BUILDING CONTRACTS.

On November 12, at the University, Sheffield, Captain W. T. Creswell, Barrister-at-Law, read a paper on "Disputable Building Contracts" to the Sheffield, South Yorkshire and District Society of Architects and Surveyors. The President of the Society, Mr. H. L. Paterson, F.R.I.B.A., was in the chair.

At the outset Captain Creswell referred to the fact that he had been privileged to read a paper to the Society on "Land Values" in 1910, and that it was his desire to bring out in his paper those points which appeared to him, from his experience gained whilst practising in the profession of an architect and surveyor and in recent years at the Bar, would be of service to his listeners. In defining the terms building agreement and building contract it was shown that they have the same legal significance. The contract between the employer and the architect or surveyor is a personal contract. The latter should be careful to put himself in a position to prove the existence of a contract; and to know, when a contract should be in writing and sealed, how and when contracts can be verbally varied, and what is sufficient release or discharge. Dealing with contracts under seal, and with public bodies and corporations, opportunity was taken to refer to the case of *Nixon v. Erith Urban District Council* (1924, 1 K.B. 87), and to compare the decision given therein with the case of *Lawford v. Billericay Rural District Council* (1903, 1 K.B. 772). Reference was also made to the case of *Piggott v. Wandsworth Borough Council* (1924) in dealing with the architect's remuneration.

The duties of an architect and surveyor comprised the preparation of plans and superintendence of work to conclusion. To prepare plans and specifications merely constituted him a draughtsman; but authority to obtain tenders constituted him an agent, with all its attendant liabilities. Such authority, however, did not authorise him to enter into a contract on the employer's behalf, even if the tender received is within the approximate estimate or the amount the employer is prepared to pay.

The remuneration of the architect and surveyor depended on a contract to pay what is reasonable; and in the absence of any agreement only what is reasonable can be recovered.

The ownership of plans was settled by the case of *Gibbon v. Pease* (1905, 1 K.B. 810). In the absence of any agreement they were the property of the employer, though the architect and surveyor still retained the copyright in them.

A person appointed to value is not an arbitrator. A valuer used his skill and knowledge only; an arbitrator acted in a judicial capacity. If an architect or surveyor acted as a valuer and appraised property, real and personal, and receives fees, he must hold a licence.

The power of the architect and surveyor to designate persons as sub-contractors depended entirely on the terms of the contract between the employer and the general contractor for the works. Without the consent of his employer, conditions of the building contract could not be waived or varied. An act to be within the scope of the architect and surveyor's authority must be an apparently necessary one. There is no implied authority that he could order extras or, unless the contract so provided, deviate from the work originally intended. Variations ordered must not completely change the character of the work contracted for. Even when the employer consented to alterations he was entitled to know the cost.

An "estimate" given as an "offer" had been held to be binding. Errors in tenders led to difficulties and were best adjusted at the commencement of the work. Fraud on the part of an employer or his agent rendered the employer liable to the contractor.

When the general contractor had contracted not to sublet, the employer might reject any sub-contractor, though the contract between the sub-contractor and the general contractor was still binding. Liability of payment to sub-contractors was specially dealt with, and the

cases bearing thereon, especially that of *Horton v. Glamorgan County Council* (1915, 1 L.T. 112), which placed the liability with general contractor.

Supervision and approval of work during execution was touched upon. No one has the approval of work could be over-exact, capricious, but must act in a *bona fide* manner. The architect and surveyor was usually the one to approve the work, and he must act initially and independently between the contractor and the employer. When his approval made a condition precedent to payment he was in the position of a quasi-arbitrator.

Disputes arising out of delay in completion of the contract, and the meaning of penalties distinguished from liquidated damages, were considered, together with matters arising out of the inclusion of the "defects and maintenance clause—power as to 'retention monies,' &c."

The granting of "progress," "completion" and "final" certificates was perhaps the important function of the architect and surveyor. It was a personal charge and they be given by himself, though another might assist him in taking measurements, &c. "Progress" certificates were not conclusive. The "completion" certificates marked an important stage, and should always be given. The "final" certificate was, as its name implied, final, and not be questioned for inaccuracy, negligence or set aside, except in special circumstances, as for fraud or collusion or for capriciousness holding it. The finality of a certificate, however, be destroyed, as was the case in *Robins v. Goddard* (1905, 1 K.B. 294). Disputes would arise, however good the contract, the necessity for the inclusion of the architect's claim was emphasised—a claim was understandable and not so altered by other clauses in the contract. It was made impossible for a lawyer to interpret Under its provisions the review of the architect's final certificate if given amidst a dispute was made possible.

MR. F. J. O. CODDINGTON, Barrister-at-Law, proposed a vote of thanks, which was seconded by Mr. F. E. P. Edwards, F.R.I.B.A., Architect; Major C. B. Flockton, F.R.I.B.A., and others joining in the discussion.

THE WEEK IN PARLIAMENT

In reply to Captain Bowyer, Sir K. Wood said that on November 1 the number under the Housing Acts of 1923 and 1924 was as follows:—

	Act of 1923.
(1) No. of houses completed	116,811 ..
(2) No. of houses under construction	42,601 ..
(3) No. of houses definitely arranged for but not started	29,840 ..
(4) No. of houses authorised but not definitely arranged for	49,036 ..
Total	238,288 ..

Sir K. Wood informed Mr. T. Thomson that the total number of houses erected with assistance since the war was 344,274, of which 212,458 had been built by local authorities, 131,816 by private enterprise. The number of houses completed under the various Housing Acts up to November 1, 1925, was:—

	No. of Houses Completed	
	Local Authorities.	Private Enterprise.
Housing, Town Planning, &c., Act, 1919 ..	168,610 ..	4,545 ..
Housing (Additional Powers) Act, 1919 ..	— ..	39,186 ..
Housing, &c., 1923 Act ..	28,848 ..	87,963 ..
Housing (Financial Provisions), 1924 Act ..	15,000 ..	122 ..
Total ..	212,458 ..	131,816 ..

CHITECTS' & BUILDERS' INQUIRY BUREAU

am glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on matters.

be appeal to our correspondents to submit their questions on paper of a size easily filed, and written as far as possible, or, better still, in typewriting!—ED.

Roads.

—Some time ago I connected a house to a main sewer and had to cross the road. I had a contract with the Council to keep the road in good repair for twelve years and take all responsibility for any accidents. A few weeks after completing my job the trench had settled a little, so I sent down to fill it in. On arrival he found the men already there with the steam-roller. He has now sent me in an account for 12s. 6d. for the same. Am I liable?

CONTRACTOR.

Treatment of Dairy Floors.

[REPLY TO "DAIRIES," OCTOBER 16.]

—I would suggest a hard red granolithic floor topping laid $\frac{1}{2}$ in. thick on a good concrete bed. A floor of this description will successfully withstand the normal working conditions of a dairy floor, and at the same time is not affected by lactic acid, whilst it is both proof and greaseproof.

E. C. MATTHEWS.

By-Law Questions.

[REPLY TO "DURBAN," NOVEMBER 6.]

—(1) *a* and *b*: I believe I am correct in saying "Yes." *c* and *d*: Depends entirely on the class of goods to be stored or made. (2) The party walls must be at least 8 in. thick of brick or similar approved incombustible material. (3) 8 in. brick or similar approved material. (4) A building "not a dwelling" and not of the warehouse class." (5) But consider the effect upon insurance. (6) If the ground floor of a store, certain goods stored would be excluded. All the above is modified by the extent to which the local authority avails itself of powers to relax bye-laws for housing schemes. Q.

Pickling Paint off Woodwork.

—I have some old woodwork which has been painted with many coats of paint that the more delicate of the mouldings have become filled up. I should be glad if anyone would suggest a method of getting rid of the whole of the paint, leaving the wood as clean as new.

OLD DEAL.

Size of Radiators.

—I am obliged to "Data" for his letter in your last issue with reference to this question, and with give the further information he has given. (1) Window area, approximately 100 sq. ft. (2) boiler in kitchen adjoining room, level, about 14 ft. direct run to position of radiator; (3) gas fire, 16 in.

A COMFORT.

Condensation.

—A kitchen and scullery with painted walls suffer from condensation to an extraordinary extent—the drips fall on to the gas stove, the maids, the food, and everything else. Windows are kept fairly well open, and there are ventilating gratings near the ceiling. Can you suggest anything that can be done to remedy the defect?

H. W. FINN.

Internal Finish to Exposed Walls.

[REPLY TO "SUBSCRIBER," OCTOBER 30.]

—Your correspondent says, "No cement plaster can be expected to have a long life if it is allowed to become more or less permanently damp." May I be allowed to point out that this does not apply to all cements.

A. H. G. B.

Hospital Windows.

SIR,—Is there a special glass on the market that allows the ultra violet rays to penetrate? Has such a glass been used in any hospitals in this country?

T-SQUARE.

Height of Adjoining Chimneys.

[REPLY TO "W. & D.," NOVEMBER 13.]

SIR,—If the outside side walls of the buildings are to become party walls when the new building is erected, the carrying up of the chimneys embodied in these walls would be stipulated in the party wall award. In other case, the new building owner would be liable for an action for damages for any nuisance caused by the new works, including smoky chimneys, and it would be advisable to obtain permission to raise the neighbour's chimneys to the required height rather than wait for such an action. Such permission should be readily obtained, or if refused, would probably be taken to absolve from subsequent action.

NEIGHBOUR.

Circular-Headed Door Frame.

[REPLY TO "QUERIST," NOVEMBER 13.]

SIR,—It is more usual and effective to "splice" the joints between the parts from which the frame is built up, and to do so in jagged form so that the break in the grain is less obvious.

JOINER.

The method illustrated is, I believe, now adopted, but mostly on second-rate jobs. For first-class work I should always use the older and better mode of construction—viz., keys and wedges—unless the architect specifies otherwise.

OLD CHOPSTICK.

Responsibility for Drainage Work.

[REPLY TO "DRAINS," NOVEMBER 13.]

SIR,—Your correspondent's letter does not give a very clear idea of the actual state of affairs. If the cess pit in the first place was a temporary measure pending the installation of a ready-planned main drainage scheme, then it was the duty of whoever was responsible for supervising the original construction of the house to obtain particulars of the drainage scheme as to levels and runs, so that the arrangements might be suitable for connecting up when the time came. If, however, the main drainage scheme is a late addition that was not under consideration at the time the house was built, then his client cannot be called upon to connect to a new sewer that is at too high a level to serve the property. There appears to have been lax supervision to allow work to begin before levels had been taken. The estate surveyor could have given levels at any point if applied to, and it would appear that this information had not been sought. I do not think the estate could be called upon to pay for work undertaken under these circumstances. Is there a separate sewer for surface water and sewage? If not, it appears that the house drainage already finds its outfall into a main sewer, and by a lucky mistake might remain as it is R. P.

SIR,—Under Section 21 of the Public Health Act, 1875, the owner or occupier of any premises within the district of a local authority has a right to drain into the sewers of that authority under certain conditions. The right, as regards the admission of domestic drainage, is absolute. Section 23 of the Act gives power to the local authority to enforce the drainage of undrained houses, provided there is a sewer under the control of the authority not more than 100 ft. from the site of such house. If Section 38 of the Public Health Acts Amendment Act, 1907, is in force, the local authority may cause a drain that is proposed to be connected to be opened up for inspection and examination, and no communication may be made with the sewer until the surveyor certifies that it may be properly made.

Section 23 of the Public Health Act of 1875 does not enable the authority to require alteration of the system of drainage to a house, or to abolish a cesspool, and drain into a sewer if the system of drainage is "sufficient" in itself, and at the cost of the owner or occupier. If the authority is seeking to make a complete new scheme of drainage, it must bear the expense itself. Under Section 24 of the Act, a drain communicating with a sewer, though sufficient in itself but not adapted to the general sewerage system of the district, may be closed, the local authority bearing the expense of providing a new drain. "Drains" would appear to have been unfortunate enough in carrying out his project to connect to the sewer at the back and in finding insufficient fall; and if Section 38 of the Public Health Acts Amendment Acts 1907, is in force, it does appear that since no communication of a drain to a sewer can be made "until the surveyor certifies that it may be properly made" there was an obligation on the part of the authority to certify. Failing to do so it (the authority) should in equity bear the expense caused to "Drains"; but "Drains" has no legal remedy against the authority to enforce the claim.

As to the work now proposed, querist's client, unless he can show "sufficient" drainage existing, would appear to be in the position that he must connect with the sewer if it is within 100 ft. and at his own expense.

DRAINS.

Replies have been sent direct to inquiries for :—

Address of Manufacturers at Stourport; Suppliers of Pyrol Paint Remover; Address of Concrete Firm; Steel Houses to U.S.A.; Damp-proof Material.

Information Wanted.—We shall be glad if any reader can give us the names of the makers of: (1) Flat, rough, porous tiles, size about 12 by 16 by $\frac{3}{4}$ in. thick; (2) "Durex" distemper; (3) "Key" Cement.

WAR MEMORIALS

Cardiff.

The Cardiff War Memorial Committee have sent a communication to the Cardiff Parks Committee stating that they have agreed to the erection of the proposed national memorial in Alexandra Gardens.

Dragoon Guards.

A memorial has been unveiled in the south-west transept of Canterbury Cathedral to the men of the 6th Dragoon Guards who fell in the war. It is of marble with two side panels of white onyx and an inlaid panel in lapis lazuli, and surmounted by a horseman in bronze. Beneath is a chamber containing an illuminated book in which are inscribed the names of 200 Guards. The memorial was designed by Mr. Darcy Braddell, and Mr. Esmond Buxton was the sculptor.

Carnoustie.

The local war memorial has been unveiled. Designed by Mr. Thomas Beattie, sculptor, of Edinburgh, it consists of a semi-circular wall, with end piers and central pedestal, upon the latter of which is a 9 ft. figure of a Black Watch soldier.

Drogheda.

A memorial unveiled recently at Drogheda is in St. Mary's-square. It is in the form of a 16 ft. white limestone Celtic cross with bronze panels.

Houghton.

A memorial executed by Mr. F. Doyle Jones, of Chelsea, has been unveiled at Houghton-le-Spring, Durham. It is in the shape of a 20 ft. cenotaph, with the figures of a soldier and a sailor in relief, and surmounted by a St. Cuthbert's cross.

Warrington.

A monolith designed by the borough surveyor, Mr. A. M. Ker, has been unveiled at the foot of the Mersey Bridge to the 1,132 Warringtonians who fell in the war.

THE BUILDING TRADE

THE NEW PUBLIC HEALTH ACT, 1925—III

PART III OF THE ACT.

Sanitary Provisions.

This Part of the Act is also adoptive, with the limitations already explained.

Drains.

Section 36 amends section 25 of the Public Health Act, 1875, in respect of the penalties incurred by a person who has constructed the drains of a house in contravention of that section. On conviction the Court may in addition to or in lieu of the penalties imposed under section 25, order that the drain be re-laid or amended by the person convicted of the offence and on failure to comply with this order the local authority may do the work and recover the expenses as a civil debt from the person guilty of the offence.

Section 37 requires a little explanation. It enacts, "The local authority may, if they think fit, by agreement with and at the expense of any person owning or occupying premises abutting on any street, not being a highway reparable by the inhabitants at large, lay down, take up or relay or renew in across or along the street such drains as may be requisite or proper for connecting the premises with any sewer which has been laid in the street doing as little damage as may be and making compensation for any damage done by them." This section, as is stated in the Memorandum, is directed to deal with a question raised by the decision in *Wood v. Ealing Tenants, Ltd.* (1907, 2 K.B. 390; *The Builder*, August 17, 1907). By section 21 of the Public Health Act, 1875, owners and occupiers of premises within the district are entitled to cause drains to empty into sewers of the local authority. In *Wood's* case, at the foot of the plaintiff's premises was a passage owned by the defendants in which was a "sewer," as the pipe in question drained several houses all in the possession of the defendants and thus maintainable by the local authority. The local authority at the request of the plaintiff had connected his drains from the end of his garden with this sewer by placing a connecting pipe in the passage. The defendant had removed this connection and the plaintiff brought an action for trespass, but the Court held his action failed because neither the plaintiff nor the local authority had any right to lay a connection on private land and this sewer was not laid on land by the local authority for which they had paid compensation.

This section appears curiously worded in that it hardly suggests the conference on the local authority of a definite right hitherto withheld by the law.

Section 38, which we refer to below, it should first be noticed, amplifies the provisions contained in section 18 of the Public Health Acts (Amendment) Act, 1890, and repeals that section as respects any area in which this section comes into force. It also supplements section 21 of the Public Health Act, 1875.

Under section 21 of the latter Act where an owner or occupier desired to connect his drains with a sewer of the local authority it was provided that the connection should be made "subject to the control of any person who is appointed by the authority to superintend the making of such communications," and under section 18 of the above Act of 1890, the local authority may do the work themselves if requested by the owner or occupier.

Section 38 empowers the local authority in lieu of appointing a person under section 21 of the Public Health Act, 1875, and without the previous request of the owner or occupier, to do the work themselves, and it also alters the provisions as to the costs of the expenditure incurred from those prescribed in section 18 of the Act of 1890.

By subsection (2) before any work is executed,

the cost or estimated cost shall be paid to the local authority or security be given for the payment of the same. By subsection (3) any excess shall be repaid by the local authority whilst by subsection (4) if there proves to be a deficit it may be recovered by the local authority summarily as a civil debt. Subsection (5) merely repeals subsection (3) of the Act of 1890.

Section 39 needs no special notice here. It is one of the sections not adoptive by rural councils, and it requires notice to be given to the urban authority of the intention of any person to reconstruct or alter drains communicating with sewers or cesspools except in cases of emergency, when special conditions are applied.

Section 40 provides that in any street not reparable by the inhabitants at large, if the local authority for the purposes of main drainage or otherwise require a larger sewer to be made than could lawfully be required under any enactment relating to private street works the person by whom the sewer is made shall construct the enlarged sewer, but the additional cost as certified by the surveyor, or in case of dispute as determined by a petty sessional court shall be paid to such person by the local authority.

The Memorandum contains an important note on this section, stating that it does not refer to cases where notices to pave and make-up private streets have been given by the local authority, and in default of compliance the local authority is doing the work, for in such cases it has already been decided in the case *Acton Urban District Council v. Watts* (67 J.P. 400) that the local authority may construct a sewer larger than is necessary in connection with the works required so long as the extra cost does not fall upon the frontagers, but this section applies to a case where an owner intends to construct a sewer before any notices to make-up the private street have been given.

Section 41 imposes a penalty on any person who wilfully or negligently allows petroleum to enter any sewer or drain communicating with a sewer.

Section 42 extends the provisions of section 36 of the Public Health Act, 1875, as to the provisions of "sufficient" water closets by providing that if the surveyor reports that the soil-pipe in connection with a watercloset is not properly ventilated, that closet shall not be deemed "sufficient" within the provisions of section 36.

We need not notice section 43, which relates to nuisances in tents, vans, &c., but may pass to the last section in Part III, section 44, which relates to—

Obnoxious Trades.

This is a section not adoptive by urban councils where the population is less than 20,000 without the consent of the Minister, and not adoptive by rural councils. It is directed to defining what is the "establishment" of an offensive trade within the Public Health Acts, 1875, to 1907.

We can pass over Part IV of the Act which relates to verminous premises. It is adoptive.

PART V OF THE ACT.

Watercourses and Streams.

This Part of the Act is also adoptive.

Section 51 enables urban authorities to require watercourses or ditches on any land laid out for building, or on which such land abuts, which in the opinion of the urban authority require to be wholly or partially filled up or covered, to have such works executed, before the building operations are begun, in connection with them by the owner, as may be necessary for effecting the objects aforesaid, "or for substituting for

the watercourse or ditch a pipe, drain or with all necessary gullies, pipes and means for conveying surface water through the land. There is a penalty for non-compliance.

Subsection (3), however, enacts that in this section shall authorise an urban authority to require the execution of works upon land of any person, other than the owner of the land laid out for building, with the consent of that person, or prejudicially to the rights of any person not being the owner of the land so laid out.

Section 52 provides that it shall not be within an urban district to culvert or cover any stream or watercourse except in accordance with plans and sections to be approved by the urban authority within six weeks after plans and sections have been submitted. Absence of approval within six weeks is consent. Subsection (2) however, provides that no requirement of the urban authority as to plans and sections shall oblige or compel any owner to receive upon his land to make provision for the passage of a quantity of water than he would have been obliged to receive or to permit to pass in this section.

Subsection (3) is curiously worded as follows: "If, with the consent of the owner of the land, the urban authority shall require the owner to make provision for the passage of a larger quantity of water than he is obliged to permit at the time of the commencement of the works under this section, any additional cost occasioned by such requirement shall be borne by the owner of the land."

By subsection (4), any difference arising from the expediency or necessity of the works may be determined by a petty sessional court. Subsection (5) imposes a penalty for breach of the provisions contained in this section.

Section 53 requires owners and occupiers of urban districts to repair maintain and keep in good order culverts and failing compliance with the provisions of the Act the urban authority can do the work and recover the expenses summarily as a civil debt.

By section 54 subsection (1) a watercourse within an urban area which is so choked up as to obstruct or impede the proper flow of water along the same and thereby to render probable an overflow of the water on to land and property adjacent to the watercourse or to hinder the usual effectual discharge of water through the same is to be deemed a nuisance within the meaning of section 36 of the Public Health Act, 1875. It is, however, provided that "Nothing in this section shall be deemed to impose any liability on any person other than the person by whose act or omission the nuisance arises or continues."

Subsection (2) excepts from the operation of this section parts of watercourses navigated by vessels employed in the carriage of goods by water. The memorandum of the Ministry points out that section 94 of the Public Health Act, 1875, under which notices of nuisance are given provides that if the nuisance by whose act default or sufferance the nuisance has arisen or been continued cannot be removed then the notice can be served on the owner or occupier of the premises. The above provision will not enable the notices under this section to be served on anyone except the person by whose act, default or sufferance the nuisance arises. When the person guilty of occasional nuisance cannot be found, the memorandum suggests that possibly the following subsection shall notice (section 55) would enable the urban authority to do the work themselves and recover the expenses from the owners or occupiers.

Section 55 enacts, "an urban authority may if they think fit contribute the whole or part of the expenses of the execution of works for the purposes mentioned in this part of the Act by agreement with owners or occupiers themselves execute any such works or borrow, subject to the provisions of the Act."

Acts 1875 to 1907 the amount of any
nt under this section.

section concludes Part V of the Act. but
section with the above provisions it is
ry to revert to sections 11 and 12.

on 11 provides, "Nothing in this Act
ejudice or affect the powers of any railway
y or the owners trustees or conservators,
under powers conferred by Parliament,
anal, inland navigation, dock or hartour
any enactment to culvert or cover any
or watercourse, or shall extend to any
or covering of a stream or watercourse
cted by a railway company, or by such
persons, and used for the purposes of the
canal, inland navigation, dock or
unless the consent of such company or
is obtained by the local authority."

on 12 enacts that the powers conferred by
of this Act shall not, without the written
of the London County Council, be exer-
with respect to any stream, watercourse,
or culvert vested in that Council by the
olis Management Act, 1855.

ARTS VI AND VII OF THE ACT.

ne Parts of the Act are not adoptive.
I relates to Recreation Grounds. Part
Infectious Diseases and Hospitals, and
d not refer to them here. The provisions
ry to the subjects we have touched upon
ed in Part VIII, which is not adoptive,
e already referred to, and Part IX, Baths
ashhouses, lies outside the scope of this
as we have strictly confined our observa-
those sections which we consider will be
rest to our readers.

ion 83, "for removing doubts," declares
re purposes mentioned in section 154 of

many years there has been a real need
book dealing with stencils and stencilling
ractical and workmanlike manner. This
w appeared. It is written and illustrated
G. Sutherland, and includes a chapter
at well-known exponent of the art of
ding, Mr. W. Davidson, and three pages
signs for Church work by Mr. E. Dinkel.
work is copiously illustrated, one page
in colours. The combination of letter-
and illustration covers practically every
of the subject. The book is more than one
craftsman—it is a book for the student
e master, for no one in search of inspira-
or suitable stencil treatment for any job
ook further. It is printed in clear type,
e illustrations are self-explanatory. The
forms a fitting companion to the "Sign-
s," published last year, which has proved
successful.

BUILDERS' BENEVOLENT INSTITUTION DINNER

THE seventy-third annual dinner of the
Builders' Benevolent Institution was held on
Thursday evening, November 12, at the Hotel
Victoria, the President, Mr. George J. Aldous,
M.C., A.I.O.B., occupying the chair. Among
those present were: Messrs. E. Guy Dawber,
P.R.I.B.A.; Ralph Knott; Robert Angell;
T. S. Darbyshire; Ernest J. Brown; Roland B.
Chessum; F. Higgs; J. Graham Mallett;
A. B. H. Colls; C. J. Trollope; A. B. Falkner;
G. Perry Nash; J. Chessum; R. A. Hinds;
W. Godson; F. A. Minter; C. J. Bennett;
Ben Carter; B. C. Aldous; T. Stirling; A.
Ritchie; G. H. Parker; R. L. Roberts; F. S.
Corby; Edward Corderoy; John T. Bolding;
C. Hamilton; F. T. Dear; R. J. Troup; A. F.
Vigor; F. T. Ingram; Chas. Laurence; W. W.
Lawrence; and many others.

The loyal toasts having been honoured,

Mr. A. B. H. Colls, proposing the toast of
"The Builders' Benevolent Institution and
its President," said that all who were in that
room fully realised the noble work that was
being carried on by the Institution. There was
no institution in the country performing a more
humane or more useful work. Though the
pensions that they were able to award were
small, they meant to their recipients all the
difference between comparative comfort and
penury. They enabled pensioners who were
living with relatives at least to contribute their
portion to the family exchequer. There was one
criticism that he had to make, and that was that
the Institution was not so well supported by
builders as it should be. He saw around him
many loyal friends of the Institution, but by
no means all of those who ought to be there.
They wanted to increase their income. If every
member of the Master Builders' Association
would contribute a guinea to the funds,
that would mean a sum of 350 guineas. There
was no more deserving cause than that of
relieving the burden of those who had suffered
misfortune, and he hoped that this appeal for
support would not fall on deaf ears. When, he
continued, he heard, as a member of the Com-
mittee, that Mr. Aldous had consented to
accept the Presidency of the Institution, he
and the other members were very pleased.
Mr. Aldous was a rising young man in the
building trade, being managing director of
Messrs. F. & H. F. Higgs, one of the most
respected firms in the industry. Mr. Higgs,
whom he was very glad to see present, was
himself a past-President, and had done yeoman
service for the Institution. Mr. Aldous had not
missed a single committee meeting, and had
personally investigated many claims to pension
in his own time.

The President, in responding, said he felt
honoured to occupy a chair that had been filled
by many senior to himself in years and experi-
ence. He had been generously supported, and
was pleased to say the contributions to the funds
amounted to something in the neighbourhood
of fifteen hundred pounds. He would like to
refer to the great loss the Institution had sus-
tained by the retirement, through ill-health, of
Mr. Frank May, who had occupied the office of
Treasurer for eighteen years. Mr. May had
been an unfailing attendant at Committees,
and had always given them the benefit of his
experience and advice. They all hoped that he
would be speedily restored to health. They had
been fortunate enough to persuade Mr. Archie
Colls to undertake the duties of Treasurer, and
they all felt that the funds of the Institution
could not be in better hands. Having observed
that they were honoured by the presence that
evening of Mr. Guy Dawber, P.R.I.B.A., the
President referred to the negotiations which had
taken place between their Institution and the
Architects' Benevolent Institution, with a view
to the taking out of builders' insurances through
the latter body (which also acted as an insurance
agency), and dividing the resulting commissions
between the two institutions, thus materially
increasing the income of two very deserving

charities. They had recommended the scheme
for acceptance, but the Master Builders' Associa-
tion had decided that they could not recommend
it to the rank and file of their members. It had
therefore been dropped for the present, but he
hoped that, at some future time, something
of the sort would be adopted. The President
then gave a detailed account of the history of
three of the Institution's pensioners in order
that his hearers might know something of the
type of man they were supporting. The three
cases were all those of master builders who
were at one time in a large way of business, but
who had fallen on evil days through no fault
of their own. It was a real pleasure, said the
President, to know that the declining years of
these honourable men had been made, through
the Institution, free from care and want. There
could not be a more deserving charity for
builders to support than that of the Builders'
Benevolent Institution. Concluding, the Presi-
dent said that it was due to his uncle, Mr. F.
Higgs, that he was proposed for that office, and
he was glad to be able to follow in his uncle's
footsteps.

Mr. Roland B. Chessum, proposing the toast
of "The Architects and Surveyors," said
he had had that privilege on many occasions,
and it was no mean toast. He had had the
pleasure of knowing intimately some of Mr.
Dawber's predecessors, and recalled the name
of Mr. Paul Waterhouse, a man who had earned
widespread esteem and affection. He wished
Mr. Dawber a very successful term of office.
It was a relaxation, a pleasure, and a delight to
them to meet the architects and surveyors,
whose presence that evening was a sign of
sympathy with those of their number who fell
by the way and needed a helping hand. He
coupled with the toast the names of Mr. Guy
Dawber, P.R.I.B.A., and Mr. Graham Mallett,
F.S.I.

Mr. E. Guy Dawber, replying, thanked Mr.
Chessum for the sympathetic way in which
he had proposed the toast. During the course
of many years of practice he had met many
builders, and he numbered them among his best
friends. The builder was the corollary of the
architect. The architect might prepare the most
beautiful design on paper, but without the aid of
the builder he was absolutely powerless. Builders
often prepared and carried out designs them-
selves, but perhaps without such happy results
as when they worked with an architect. He
was glad to find the Institution in a flourishing
condition, though he could not but feel sorry
that the scheme of insurance which had been
worked out had not been allowed to come to
fruition. He hoped very much that ultimately
they would be able to give it a trial.

Mr. J. Graham Mallett replied for the Sur-
veyors.

At this point the President announced that
the total contributions amounted to
£1,517 1s. 6d.

Mr. G. Perry Nash proposed the toast of
"The Visitors," to which Capt. S. F. Corby
replied.

The final toast, "The Vice-Presidents,
Trustees, Committee and Stewards," was pro-
posed by Mr. A. B. Falkner and responded to
by Mr. John T. Bolding.

Staff Dinner.

The directors and management of Messrs.
James Keith & Blackman Co., Ltd., ven-
tilating, heating and lighting engineers, were
recently entertained by the staff of the head
office and London works of the company to
a dinner at the Connaught Rooms, Great Queen-
street, W.C. 2. Hosts and guests numbered 110,
and at the special request of the hosts the
chair was taken by Mr. T. W. Alsop (the chair-
man of the company), who was supported by
Mr. T. B. Callard (director), Mr. C. Tuson
(director), Mr. George Keith (managing director),
Mr. J. W. Hampshair (director and manager),
Mr. W. B. Richards (assistant manager), and
Mr. M. Burningham (secretary).

THE PUBLIC WORKS, ROADS AND TRANSPORT CONGRESS AND EXHIBITION

THE Congress and Exhibition opened yesterday at the Royal Agricultural Hall, Islington. The Congress consists of a series of debates on papers read by members of such institutions as the Associations of Local Authority, the British Waterworks Association, and the Institution of Municipal and County Engineers. We give below a brief summary of some of the papers contributed, and some notes on exhibits. The Exhibition closes on November 26.

Partial Purification of Sewage by Activated Sludge.

The object of this paper, which was by Mr. H. C. Whitehead, Assoc.M.Inst.C.E., Engineer to the Birmingham Tame and Rea District Drainage Board, was to bring before the Congress certain aspects of the manipulative problem of sewage purification, more particularly as regards the use of activated sludge for the partial purification of sewage. The problem as a whole might be divided into various operations, dependent upon the composition of the sewage and the mentality of the engineer or chemist. For the present purpose it would suffice to take the following simple sub-divisions:—(1) Removal of settleable solids; (2) removal of colloidal solids; (3) oxidation of dissolved impurities in the liquor; (4) treatment and disposal of resultant sludges. It was desirable that each of these operations be separately performed. Attempts to perform dual operations in a sub-division of a plant often led to loss of efficiency in one or other of the operations. It would be observed that an essential feature was the separate conditioning of the sludge employed for flocculation purposes. The economic efficiency of a bio-aeration plant was dependent upon a combination of biological and mechanical efficiencies. The mechanical operations necessary to the process were—(1) Mixing of sewage liquor and sludge; (2) aeration of the mixture; (3) propulsion of the mixture through the plant; (4) separation of the sludge from the effluent; (5) return of the sludge to the mixing-and-aeration tank. The power consumed in the first operation was relatively large, and probably exceeded 60 per cent. of the total consumption. Operations (3) and (4) demanded little power, and usually were met by available gravitation fall in the works. Operation (5) might be accurately estimated, and accounted for 5-10 per cent. of the whole consumption. The problem of aeration did not present the same difficulty as that of mixing. As the power required was so much smaller than the power required for mixing the allowable margin in efficiency might be greater; the usual mechanical means of aeration were surface disturbance. In conclusion, he said that it generally fell to the lot of an engineer in this country to enlarge an existing sewage disposal works, rather than to start *de novo*, and for this reason he trusted that his paper might be of some value to engineers faced with the commoner, and generally more difficult, problem.

Activated Sludge Experiments at Bradford.

Mr. J. A. Reddie, F.I.C., chief chemist of the Bradford sewage works, divided his remarks on this subject under two headings, viz. (1) Nitrogen losses in an activated sludge tank; and (2) Partial treatment of a strong sewage by activated sludge. Speaking on the former, he said that it might be of interest to some of the members of the Congress to record the results obtained in an experiment carried out with the object of obtaining some information as to the nitrogen gains and losses in an activated sludge tank dealing with a strong sewage. He illustrated this with four tables, finding that on all the forms of nitrogen the loss worked out at 18.60 per cent., or a retention of nitrogen of 81.4 per cent.

Referring to Part 2 of his paper, he said that the treatment of sewage by activated sludge

was generally regarded as a process complete in itself, and in the case of the majority of sewages it was only as a complete process that it could be economically considered. But in the case of strong sewages, which might contain abnormal amounts of difficult trade wastes, it seemed that it might usefully be considered and experimented with, as a partial process, either as a final method after a preliminary tank treatment, or as a preliminary to a high-rate filtration process. Experiments in this direction would always be justified in the case of a sewage having any abnormal features. The experience with Bradford sewage had been that it was impossible economically to produce by activated sludge in one operation a satisfactory final effluent, but when the question of further treatment was entered upon, it was found that an effluent such as this could be passed on to filters at a rate greatly in excess of the normal filtration rate of the Bradford tank effluent.

Sewage Disposal of Rural Areas.

Mr. W. H. Makepiece, F.Inst.S.E., the City Sewage Engineer for Stoke-on-Trent, dealt with this subject both from an engineering and economic aspect. He said that purely residential property was not in itself of sufficient value to carry (economically) a sewerage system and disposal plant unless the houses were very concentrated. This was rarely the case, and consequently the cost of large lengths of sewers in a rapidly growing residential rural area was very great. Instances occurred where the cost of the sewerage system was at least equal to one and a-half times, up to as much as three times the assessable value of the property it was intended to serve. Consequently, many necessary schemes of sewerage were held up, with consequent health disadvantages, because of the great financial cost involved in the form of rates to the occupier. It therefore seemed to be necessary that some revision should be made in the requirements and responsibilities of the community with regard to such cases. Groups of from 30 to 100 houses could be successfully treated by a de-centralised method of disposal rather than a centralised one. In many cases the size of the sewer was altogether unnecessarily large. The works were frequently constructed to deal with the whole of the sewage on the Ministry of Health's minimum requirements, without any apparent consideration as to the number of times in a year the maximum rate of flow was experienced. With more careful consideration in the design of drainage schemes on a de-centralised basis, it would often be the means of saving many thousands of pounds in rural areas, and the health advantages would not be any less than in the more comprehensive schemes. Decentralisation would do much towards improving these sanitary conditions, cheapen the cost of such schemes tremendously, and if supported by some national or county grant (which was now extended to such things as education of all sections, roads, and similar public services) would be the means still further of taking the town-dweller, with the present-day facilities of doing so, out into the country.

Sludge Disposal.

Mr. P. G. Lloyd, F.C.S., F.I.S.E., who is the manager of the Kingston Sewage Disposal Works dealt with the subject of sludge. He first outlined the existing methods of disposal, namely, depositing at sea, pressing, lagooning, burning, as a manure, or treating it chemically as in operation at Birmingham. Summarising the returns from 99 sewage works contained in the 1922 Proceedings of the Association of Managers of Sewage Disposal Works, one found that 67 used lagoons, 19 presses, 16 land and 3 trenching. From time to time efforts had been made to obtain by-products from sludges. The extraction of grease as carried out at Bradford, the sale of which had produced a considerable revenue, was applicable only to sewages that had a high

grease content. In 1915 costly experiments were carried out at Wimbledon by the Oils Syndicate for the extraction of oil and production of carbon from sludge, but these were disappointing, and nothing came of it. The lecturer had heard that experiments recently been carried out for the extraction of a by-product from sludge that had promising future. He was not at liberty to mention what the by-product was, but he informed that the promoters would be taking the output from several sewage works conveyance to a central depot for treatment, and although not in a position to pay for it, the municipalities would at any rate be relieved of further trouble. To the knowledge, however, of many sewage works, excellent results had been obtained by the use of sludge as a manure. What was required was cheap production in a convenient form above all, cheap transport. The whole must be conducted on commercial lines; useless to expect farmers and growers to take it as a duty; it remained, therefore, to sell in competition with other manures at a price that would tempt the user to give a trial. He had formed the opinion that the sludge problem was still with us, and means easy of solution. It remained for the works or process to determine their salvation.

THE EXHIBITS.

The Ransome Machinery Co., Ltd., Victoria-street, S.W.1, are showing in their tilting drum concrete mixers on Stand 5. They are made in three sizes, the Feather, the Lightweight, and the Welterweight, with output capacities per eight-hour day of approximately 14.5-16, 55-60, and 92-100 cubic yards respectively, so that they are suitable for small builder or the large contractor, and capable of dealing with every class of concrete work. Although strongly made, they are light in weight and, having large road wheels, are transported from place to place. Others include a hand-power moulding press, a Harvey concrete slab machine, a steel tilting wheelbarrow, and steel piling and plant.

The exhibit, on Stand 12, of the British forced Concrete Engineering Co., Ltd., Dickinson-street, Manchester, consists of a number of photographic enlargements illustrating road work in which B.R.C. fabric has been used. These photographs cover various types of road work taken from all parts of the country. The material exhibits include, of Fabric Number 9 and samples of the B.R.C. top and bottom reinforcement; a concrete slab showing the position of the fabric in the road; and an actual section of tarmac reinforced with the fabric taken from a road a few years ago. Another interesting feature of the exhibit is the showing, three times enlarged, of a film of the construction of fourteen B.R.C. roads at Tilbury.

Another interesting stand is that of the Liner Concrete Machinery Co., Ltd., of Glasgow Bridge, City-road, Newcastle-on-Tyne, showing their "A" type "Liner" concrete moulding machine. This is particularly suitable for the manufacture of flags, channel fence-posts, sewerage blocks, &c., and makers state that only one is required for all of a council's or corporation's needs. The "Liner" combination slab, block and channel machine is also on view, its name indicating various purposes. Last, but not least, show their patent "Semi-Dry" concrete machine which they claim effects a saving of 10 to 15 per cent.

On Stand 5 the Rawplug Co., Ltd., Gloucester House, Cromwell-road, S.W., showing a large variety of labour-saving devices, the foremost, of course, being the well-known Rawplug; the gripping power of this little appliance is being demonstrated throughout the day. The Rawplug bolt anchor deserves particular attention, as its functions are so many where the utility of the Rawplug ceases. Other exhibits include bathroom fittings, screws, liquid porcelain, Durofix and Dur

er, it is stated, when applied to bright
ables them to retain their brilliance
definitely.

chemical preparations of Messrs. Brunner,
Co., Ltd., are displayed on Stand 10,
they have arranged a display of some of
er softening alkalis, calcium chloride
aying on roads, &c., water treatment,
ing, &c., silicate of soda for case-
concrete roads, floors, &c. (an
machine illustrating this hardening
working on the stand), prevention of
olveny, &c. On this stand are shown
e products of the Castner-Kellner
Ltd., and the Buxton Lime Firms

and 13 the Phoenix Engineering Co.,
Chard, Somerset, are showing their
Extra Rapid" bitumen sprayer. This
has a capacity of 160 gallons and is
th a powerful double-acting spraying
e suction of which is controlled by a
special design embodied in the base of
o and so arranged that one movement
from "work" to "hot air" and *vice*
is complete with flexible steel hose,
pe and spraying nozzle. There is also
continuous heating hand tar-spraying
of 160 gallons capacity; a road drying
shing outfit, with removable pan of
s capacity; a 50 gallons vertical tar
h boiler; a "Floodgate" hand lift
ers' pump, mounted on a steel barrow;
phragm hand lift contractors' pump.

Goodwin, Bardsley & Co., Ltd., of St.
a Ironworks, Leicester, are showing a
ent Acme granulator for the production
ings; a No. 1 ($\frac{1}{4}$ yard) original open
er with hoist, batch-measuring and
hopper, self-contained engine, auto-
water tank, &c.; an improved portable
veyor or loader with steel framework,
heels, power unit, &c., and a patent
indrical dryer, complete with patent
draught, cyclone dust collector, &c.,
on wheels.

d that should not be missed is that of
uke & Bell, Ltd., of Carlton Engineer-
ks, Lichfield, Staffs. They have on
l-ton capacity petrol motor lorry for
haulage work and the transport of
fuse; end-tipping body with patent
hand-operated tipping gear mounted
dorris" 1-ton chassis, with a body of
ft. or 100 cub. ft. capacity as required.
ver's cab is provided with side doors
ustable windscreen. There is also a
weeping attachment, suitable for use
motor vehicles, to sweep 6 ft. wide; a
h sprinkler tank is fitted to minimise
sturbance, and dust shield drawbar
with draw and buffing springs. Other
include a "Carlton" revolving sewage
or, suitable for filter beds up to 40 ft.
; a "Grip" patent manhole cover
me for heavy road traffic; and a
"manhole cover and frame for heavy
ffic. This latter is a cheaper type of
an the first, and possesses some of its
ges.

and 47 the Neuchatel Asphalte Co.,
53, Victoria-street, S.W.1, are exhibi-
bles of their asphalt suitable for all
road work, footways, roofing, building
, and photographs of contracts carried
the United Kingdom. There is a daily
on of cinema films showing the "Naco
asphalt plant in operation and the
ion and laying of asphalt macadam
nited mastic asphalt. The firm are the
ors of the Abruzzi Mines at Scafa,
Italy, and sole concessionaires of the
l Government of Neuchatel, Switzer-
all asphalt mining rights in the Val
ers. In addition to the laying of their
ompressed asphalt powder and granited
stic asphalt, the company undertakes
facing with natural bitumen in the form
coat or single-coat asphalt macadam,
h purpose, in conjunction with Messrs.
Paxman & Co., Ltd., the Colchester
s, they have brought out a new portable
drying and mixing plant—the "Naco

Pax" plant, which is on view at the latter's
stand.

The Millar Machinery Co., Ltd., have on view
five of their machines. The 8-ton standard
portable asphalt plant is the product of long
experience in the manufacture and operation of
asphalt-mixing machinery. These machines are
supplied for hourly outputs of 3 $\frac{1}{2}$ tons, 8 tons,
12 tons and upwards. The 4L "Jaeger" con-
crete mixer has a batch capacity of 7 cubic feet
unmixed, and 4 $\frac{1}{2}$ cubic feet mixed, and an
average daily output of 40-50 cubic yards. The
other exhibits are a "Tructractor" fitted with
an automatic end dumping body, and having a
hopper capacity of 30 cubic feet; a concrete
cart; and a single diaphragm pump. These
latter have a capacity of 6,000 and 12,000
gallons per hour.

On Stand 51 the Limmer and Trinidad Lake
Asphalt Co., Ltd., are showing samples of the
standard native bitumen; their asphalt mac-
adam taken from various roads throughout the
British Isles; "Lithocrete" on Trinidad
asphaltic concrete; compressible rock asphalt;
Lithofalt paving blocks; "Lithocrete" paving;
mastic asphalt as applied to modern buildings;
samples of "Viasphalt" (a bituminous powder
for enriching tarmacadam); samples of "Tar-
bit" (a solution for enriched tarmacadam);
details of asphalt macadam plants and all forms

road roller, weighing 9 tons empty; a 6-ton
tandem roller; a 4-ton "Cummer" plant; and
a concrete mixer.

Messrs. Ruston & Hornsby, Ltd., of Lincoln,
are exhibiting on Stand 66 some of their
machines, of which the most outstanding is the
No. 6 Universal excavator. This combines the
uses of a standard crane navy, a dragline, a
grabbing navy, a trench excavator, a pile-
driver and a crane. It can be mounted on rail
wheels, road wheels or caterpillars, and can be
fitted with a steam engine or electricity. There
is also on view a horizontal airless injection oil
engine made to run on the cheapest oils obtain-
able; fuel consumption is as low as 42 lbs. per
b.h.p. per hour even in the larger sizes. This
series includes engines from 16 to 34 b.h.p. The
exhibit also includes a class "M" horizontal
oil engine, a class "E.P." portable crude oil
engine, a Thermax boiler, a "P.M." pumping
plant, and various pumps.

On Stand 67 the exhibit of the Expanded
Metal Company, Ltd., York Mansions, Petty
France, Westminster, S.W.1, consists of
samples of the company's products and
photographs of a few of the more important
municipal works carried out on its systems.
The samples include "Expamet" "RR"
reinforcements for concrete roads, &c.;
"Expamet" expanded steel sheet reinforcement

"Winget" Combined Clinker-Screening and Crushing Unit.

of roadmaking equipment as manufactured by
Roadways Equipment, Ltd.; Hutchinson's
testing apparatus and instruments for standard-
ising bituminous road materials, &c. The
above exhibits will be supplemented by photo-
graphs, and a daily exhibition of cinematograph
films showing the Trinidad Lake asphalt indus-
try; the manufacture and application of mastic
asphalt; and the preparation and laying of
compressible rock asphalt.

Messrs. Brookes, Ltd., of 65, Victoria-street,
S.W.1, and its branches are showing, on Stand
53, samples of their productions in connection
with roadways and footways. These include
specimens of granite from their English, Welsh,
Scotch, Channel Islands and Scandinavian
quarries, showing their productions of setts,
macadam and chippings, and architectural
granite; specimens of tarred granite and tarred
slag; specimens of their "Nonslip" stone for
footways, &c.; and samples of their glazed
brick and fireclay productions, artificial stone,
mosaics, terrazzo, jointless flooring, &c.

On Stand 61 Messrs. Marshall, Sons & Co.,
Ltd., of Britannia Ironworks, Gainsborough,
Lincs, have an interesting display of their
machines. These include a 10-ton compound
road roller, class S, with piston valve working at
180 lb. per sq. inch, and fitted with two-time
"Allen" scarifier. The transmission is on the
four-shaft principle and embodies a four-pinion
differential. There is also a "Universal" type

for concrete; "Expamet" and "BB" lathings
for plasterwork; "Exmet" reinforcement for
brickwork, concrete blockwork, &c.; a section
of kerbing reinforced with "Kerbmet"; and
some "Expamet" treble-layer reinforcement.

On Stand 68 the British Steel Piling Co., Ltd.,
of 54A, Parliament-street, London, S.W.1, are
exhibiting their "Wonder" tilting drum con-
crete mixer mounted on road wheels, and another
complete with power loader and automatic water
tank; a "Zenith" half-yard concrete mixer
mounted on road wheels, complete with power
loader and automatic water tank; an "SA"
builders' hoist, fitted with petrol engine; a
"Zenith" steam friction winch with boiler; and
sections of Universal and "Simplex" steel sheet
piling. There is also a pile-driving plant,
complete with model McKiernan-Terry piling
hammer operated by compressed air, and two
other McKiernan-Terry hammers.

Messrs. Winget, Ltd., of Grosvenor-gardens,
Westminster, S.W. 1, have arranged a large and
interesting display of machines on Stand 69.
The accompanying illustration is of their com-
bined clinker screening and crushing set. Note-
worthy exhibits on this stand include a No. 2
crusher, complete with petrol engine on portable
carriage; a No. 1 portable conveyor; a Warwick
2 $\frac{1}{2}$ cubic ft. mixer, a semi-spiral mixer, and
a 1926 model of their chain spade engine-driven
portable road mixer; a No. 3 automatic slab-
making machine; a No. 1 universal pressure

machine, fitted with kerbmaking outfit; and a model of the 100 ton automatic stone-drying and tarring plant. Several of these machines are running for demonstration purposes.

Messrs. Frederick Parker, of Viaduct Works, Catherine-street Extension, Leicester, have an imposing array of machines on Stand 76. These include a 14 in. by 7 in. "Monarch" stone breaker, solid body pattern, complete with revolving screen mounted on road wheels. The screen is carried by external girders from the sides of the crusher, with timber-feeding platform and end-supporting pedestals, enabling the whole unit to be easily transportable, and providing ample accommodation on the feeding platform. There is also a concrete mixer of 7 cubic ft. capacity, with automatic loading hopper, a "Lister" petrol engine, Coventry roller chain transmission, automatic water tank, &c. Other exhibits include a 12 in. by 4 in. solid body type granulator, designed to deal with 2½ tons per hour down to ¼ in. material; a 5½ tons per hour granulator; a "Little Giant" concrete mixer, to turn out 300-350 batches per day of 4 cubic ft.; a double-armed type trough paddle mixer; a "Monarch" blake crusher, to deal with 8 tons per hour; a 4 cubic ft. concrete mixer; a horizontal belt-driven friction hoist; a set of five crushing rolls; various barrows; and a dryer.

The Croft Granite, Brick & Concrete Co., Ltd., of Croft, near Leicester, have arranged an interesting display of their products on Stand 87. These include "Crofmac" granite, Leicester-shire broken granite and chippings, and granite in various forms, including paving flags, kerbs and channels, fence and rail posts, doors, hoods, and brackets.

On Stand 103, William Shepherd & Sons, Ltd., together with their associated companies, the Harlington Quarries, Ltd., and Shepherd's Paving Block Co., Ltd., of Milkstone, Rochdale, are showing their road surfacings. These include asphaltic slag, asphaltic limestone, bituminous asphalt, "Shepafalte" (a new mastic asphalt), their tramway paving blocks, and "Shepfast" composition for laying wood block and boarded floors, which the makers claim to be preservative and a preventative of dry rot. The stand telephone number is Clerkenwell 8206.

Messrs. Builders' and Contractors' Plant, Ltd., have a big array on Stand 116. The chief exhibit is asphalt plant No. 2s. This combines many improvements, notably, automatic feeding, triple long drying drum, oil-firing for drying and heating, scientific grading apparatus, the "Roll" (no paddle) system of mixing, high delivery, and the whole arranged in such a way as to achieve real portability and occupying a minimum of space. Other exhibits include a tarmacadam plant, a "Roll" concrete mixer, a road heater for running repairs, a "B.C.P." granulator for the production of road chippings of exact grade, a clinker breaker, handling machinery, sand and gravel plant, stationary equipment.

The British Portland Cement Association, Ltd., of 20, Dartmouth-street, Westminster, S.W. 1, "an organisation for extending and improving the use of concrete," occupy Stand 126. This exhibit shows the utility and versatility of concrete for municipal purposes. It includes a section of all-concrete road with expansion joint and white lines; paving, kerbing, and channels; treguard; culvert; catchpit; direction and mile posts. Examples of concrete representing various natural stones are on view, demonstrating that concrete of pleasing colour and texture suitable for bridge construction, &c., can be produced.

On Stand 134, the Lafarge Aluminous Cement Company, Ltd., of Lincoln House, 296-302, High Holborn, London, W.C. 1, are exhibiting their "Ciment Fondu," an indecomposable cement of high-alumina content. Its qualities include high initial resistance at twenty-four hours, and complete immunity from attack by sea-water, and sulphur-impregnated waters and earths. The exhibit demonstrates its application as a binder for macadam road surfaces. Descriptive data and tests are given of its general use for all forms of structural engineering work.

THE DECORATORS' EXHIBITION, MANCHESTER

An event of interest to the building and decorating trades is the N.S.P.P. Coalition and Decorators' Exhibition, which opened in Manchester on Tuesday last and closes to-morrow, Saturday. The National Society for the Preservation of Property (by paint and varnish) is doing a very useful work in educating the public in the economies that may be effected in painting and varnishing at proper intervals. The Society is just now emphasising that at this season of the year particularly favourable estimates may be obtained for interior decoration work, and that the most skilled workmen are more readily available than during the spring. The following are the principal events in connection with the Exhibition and N.S.P.P. conferences:—Tuesday, November 17, N.S.P.P. Council Meeting, Midland Grand Hotel. Wednesday, at 11 a.m., Exhibition opened by Lord Stanley of Alderley, City Hall, Deansgate; Open Meeting, Milton Hall: speakers, Right Hon. Charles A. McCurdy, P.C., K.C., Mr. F. W. Goodenough, and Mr. Geoffrey le M. Mander. Thursday, Annual General Meeting of the National Federation of Master Painters and Decorators of England and Wales, Milton Hall; evening, Annual Dinner of the same institution, Midland Grand Hotel. To-day, Friday, at 10 a.m., N.S.P.P. General Meeting, Milton Hall; 12 p.m., N.S.P.P. Council Meeting, Milton Hall.

Following are notices of some of the principal exhibits:—

Messrs. Drew, Clark & Co. show the "Diamond" extension ladders, which have now established themselves as a convenience to master painters. They also show a more recent device, the "Raprig" scaffolding—a handy, rapid and economical method of erecting scaffolding on the unit system—which has many advantages for painting firms, especially those concerned with church, theatre or cinema work, or other jobs on which large scaffolding is required. This scaffolding can be fitted with wheeled legs, enabling the whole structure to be moved about the apartment which is being treated.

Messrs. The Eclipse Rail-track Ladder Co., of Bristol, have specialised in extension goods from the point of both speed and safety in use; amongst their extension patents special attention is called to their ladders, scaffold boards, steps, and fire escapes; they also manufacture many other specialties, amongst which may be mentioned various designs of steps, paper-hangers' improved folding tables, adjustable ladder brackets, hand trucks, and fire hose carts, etc. The firm's works are laid out for mass production; no tool or machine is omitted that can help towards improving the quality of the goods manufactured.

Messrs. The Silicate Paint Company, of Charlton, London, S.E.7, exhibit three rooms treated with Duresco. The principal room is designed in the Adam style, with the other two rooms showing pleasing effects obtained at moderate cost by well-chosen colours and simple decorations in Duresco. For the whole of the woodwork throughout the stand the Company's well-known flat oil paint, Silpaco, is used. An interesting feature of the exhibit is the display of decorative panels by the winners of prizes offered by the Company for the best decorated panels executed in Duresco by employees of members of the Master Painters' Federation.

Messrs. Naylor Brothers (London), Ltd., show four rooms and small central office representing drawing and dining rooms, bedroom and kitchen or bathroom, and suggesting decorative schemes and colours as well as showing the various products in actual use. Amongst the Naylor products to be seen are the varnishes, "Suwideo," "One Coat Oak," and "Encaustic Copal" flat varnish, "S.E.G." and "Supermatt" paints, "Bel-

dec" and "Suwena" enamels, and "rodec" water paint. The fascia and of the stand are finished with the imitation stone paint, "Petrumite." stand are to be seen various other displayed on panels, frames, and in other

Messrs. Hoyle, Robson, Barnett & Co. (in association with John Smith & Son, Ltd.), combine to show a practical interest, both from a manufacturing and decorative point of view. Through stand the firm's well-known materials as they would be under every-day conditions and no attempt has been made to get which would be impossible in domestic surroundings. The stand shows columned fronts bearing distinct schemes tied together by a lettered frieze and dominant note of "Petunia" Hoyle's gold inscriptions. Various of the firm's specialties are shown with advantage stand, which has two rooms, representing dining-room and a lounge, designed for practical use to the decorator.

Messrs. Pinchin, Johnson & Co., Ltd., incorporating Wilkinson, Heywood & Co., show the decorative effects obtainable of the range of Pinchin, Johnson super which comprise Deydol Distemper, Flat Wall-Finish, Satinette Enamel, Superval, and Gripon Super-Paint. Other specialties also exhibited are "Oblique" undercoating white and "Figaro" enamel gloss paint, which gives a high gloss finish coupled with a high durability. Other exhibits of finishing iron paints, preservatives, stains, and varnishes for all purposes and every

Messrs. The Walpamur Company show an exhibit comprising a loggia, lounge hall and boudoir. The kitchen is painted with "Duradio" enamel paint may be easily washed without injury. In the panelled hall the material is "Walpamur" water paint, and the strips are treated with "Muromatte" and finished with "Yeoman" "Muromatte" flat oil paint is the used on the walls of the boudoir, and the woodwork is finished with "Mirabol." The outside of this exhibit is painted Nile green and azure blue "Duradio" the front door with Drop Black and with "Yeoman" hall door varnish.

Messrs. Glico Petroleum, Ltd., show grades of "Glico" white spirit (a substitute), specially distilled to meet requirements of paint, varnish, and manufacturers, also boot, floor, furniture, metal-polish manufacturers, and of many products in which the use of turpentine good substitute, is essential. It is completely water-white, quick-drying, of sweet and entirely free from acid, oil and Samples of "Decco Turps," an alternative American turpentine, is also shown essential points of this are that it cheaper than American turpentine, range of distillation, drying proper odour are similar to those products.

Messrs. Goodlass, Wall & Co., Ltd., mounted by entablature and cornice. "Non-bleeding" fast red, the stand firm is supported by columns of model which display "Combinol" gloss green. Use has been made of the stand as follows:—A complete front elevation of a bungalow with ornamental fencing and garden. The fencing and jalousie is painted in "Combinol" gloss deep green shade. A copy of oak half-timbering carried out in deal treated with "Brustane," the plaster walls between a coat of buff "Pintesco." Another shows the front of a town house, finished in Napier green and Goodlass door varnish. On the third side is the

ed lounge room, the walls of which graduated tones of "Combinol." side displays a bathroom, the whole s and woodwork of which are in "white enamel.

Thornley & Knight, Ltd., have a rich Superfine Snow White enamel used to finish the main columns—alustrade, whilst the fascia has d in Flat White Japan, with the pale gold colour. The front of the office, including the painted ps in the frieze panel, etc., and elevation farthest from the main including the painted decorations, executed in "Tekamatte" wall latter elevation is of a Georgian ne frieze panel, inspired by Wedg- shows boars' heads decoratively encircled with oak leaves and deep vellum monochrome has been the boars' heads and acorns, whilst are in a lighter tone of the ground ne frieze is further enriched by gold, and an inner dice pattern so gilt. Panel and other mouldings bronzed, scumbled with "Scum- the lights wiped off. A medallion ainted in monochrome, and intro- the centre panel, completes the he back and remaining side eleva- been treated in varying standard Asbestolin" water paint, and the d decorations of these elevations en carried out in this material.

Dixon's White, Ltd., exhibit ex- work which show that Dixon's apable of producing excellent paint- r finishes, but particular stress is s value as an undercoating for was the demand for the material rpose that induced the manufac- apply a ready mixed Dixon's White oating. Fluxine enamel, another is a slow-drying enamel, perfectly not lose its colour on exposure. e paint, another exhibit, is now architects for use on comparatively t. This paint can be applied to eting, and pieces of asbestos sheet- with it are exhibited for inspection. paint is a paint of high gloss that exterior exposure, whether against air of manufacturing towns or the tivity of sea air. The Company e all classes of white and coloured nishes, liquid dryers, distempers, paint, and other materials.

Mander Brothers, Ltd., show a n decorated with some of the firm's e colours used are all standard r convenience the reference e given. THE SELECTION OF STONE FOR BUILDING

A LECTURE on this subject was delivered by Professor A. P. Laurie to the students of the Royal Academy of Arts, on November 18. Professor Laurie began by describing the various stones that were used for building purposes, and gave some account of their chemical composition. He then went on to deal with the two main groups of stones which are used for building—sandstones and limestones—and described the various causes of the weathering of the stone. He pointed out that the most serious cause of weathering to-day was the attack on the stone of the acid oxidised products of sulphur, due to the burning of the sulphur in coal; and went on to show that this was not confined to the towns, but was found in build- ings even in remote districts.

The action of the sulphur acids resulted in the formation in the case of limestones, and in the case of sandstones which contain calcite, of calcium sulphate which was slightly soluble in water, and so would cause the stone slowly to waste away. But the most serious effect of calcium sulphate was its crystallisation with the stone, resulting in the stone being mechan- ically broken up. In illustration of this he showed experiments on the breaking-up of stone by the crystallisation of salts within it, and explained the conditions under which these took place, and illustrated this by experiments made on crystallisation in capillary tubes. He pointed out that as far as sandstones are concerned, it was possible to select sandstones for building which were practically free from calcite, and should, therefore, be used in modern cities. In the case of limestones, all that could be done was to select a stone which would best resist this form of attack. Much depended upon the susceptibility of the lime- stone to attack, which could be tested by exposing small cubes to an acid vapour, and by measuring the rate of absorption of water and evaporation from the stone, which could also be made the subject of laboratory tests.

He described experiments on certain selected limestones, showing how much they differed in susceptibility to attack and in tendency to break up, owing to the crystallisation of the sulphate of lime. Apparently one of the conditions was that there should be free and rapid evaporation from the stone after wetting, so as to draw the sulphate of lime to the surface and prevent it crystallising inside the stone. This raised the question as to whether the hosing of buildings during hot weather would not be of advantage. Further research was required in these directions, but in the mean- time it was quite possible to guide the architect, both in the selection of sandstones and in the selection of limestones by chemical analysis and by experiments on the rate of attack of acid vapours upon samples of the stones.

Metropolitan Water Board.

The twenty-second Annual Report of the Metropolitan Water Board for 1924-25 has just been published, and may be obtained from the Board's publication agents, Messrs. P. S. King & Son, Ltd., 2, Great Smith-street, Westminster, S.W., price 5s. The Report contains 123 pages divided under such headings as Constitution, Water Rental, Water Rates and Charges, Supply, Storage, &c., and concluding with a comparison of the active equipment of the water works before June, 1904, and at the present time. From this latter it is seen that against the 4,115 million gallons capacity for unfiltered water in 1904, we have now a capacity of 12,907 million gallons. The corresponding figures for filtered water are 244 and 320 respectively. The Report also contains two coloured diagrams showing (a) the average daily supply from the several sources, 1915-16 to 1924-25, and (b) the Thames flow and abstraction, and rainfall in the Thames Valley for the same period.

NEW RAILWAY FOR NORTH-WEST LONDON

THE new double-track extension line, jointly constructed by the Metropolitan and London & North-Eastern companies, to Croyley Green and Watford, was opened recently. This new line offers many advantages. It makes Watford easier of access; it will tend to relieve the congestion of the inner suburban areas of the Metropolis by opening up a residential district offering wide scope for building operations; and, at the same time, materially improve London's transport facilities. The station is conveniently situated on the south-west side of the town, adjoining the Cassiobury Park Estate, and the advent of the new railway will enable extensive development to take place.

The train service provided over the new route is 140 trains daily. A proportion of these will be operated electrically by the "Metro" to Baker-street and thence through to City stations, whilst the London & North-Eastern Railway will introduce a new service of steam-operated express trains to and from Marylebone. In addition to this, a northerly junction will permit of a service being maintained from Watford to Rickmansworth and various stations north of this point, both on the Metropolitan and L.N.E.R. systems, and will also provide Watford with a direct means of access to numerous important districts in the Midlands, the North of England and Scotland.

The new line, although only 2½ miles in length, has cost £300,000, and has entailed the exca- vation of half-a-million cubic yards of gravel and chalk, the building of a number of heavy embankments, the erection of ten bridges, and the laying out of extensive goods yards. The most important bridges are those over the River Gade, the Grand Junction Canal, and the railway at Croyley Green; in the case of the first-named, it was found necessary, owing to the persistent presence of water in the chalk abut- ments, to have recourse to monolithic construc- tion and timber piling; whilst the Croyley Green bridge is particularly interesting, inasmuch as it carries not only the roadway but the station buildings in addition. A boldly conceived burrowing junction has been provided at Harrow to permit heavy cross direction traffic to be expeditiously handled. The construction of this entailed the cutting of a tunnel under the Aylesbury line, and the introduction of 12,600 cubic yards of concrete and brickwork and half-a- mile of new permanent way.

The whole of the work on the new line has been carried out under the supervision of Mr. E. A. Wilson, chief engineer of the Metropolitan Railway, acting for the joint companies, the resident engineer being Mr. J. Martin Clark; and the station buildings were designed by the Metropolitan Railway Company's architect, Mr. C. W. Clarke, A.R.I.B.A. The general contractors were Messrs. Logan & Hemingway, of Doncaster; whilst the steelwork for the bridges was supplied by Messrs. Eastwood Swinger & Co., Litchurch, near Derby.

New Thames Bridges.

The erection of a new bridge over the Thames at Hampton Court was considered by the Surrey County Council at a recent meeting at Kingston. It was reported that an agreement would probably be arrived at with the Ministry of Transport and the Office of Works whereby the portion of Hampton Court Palace grounds required for the new bridge would be made available. The Ministry of Transport wrote, suggesting that it would be advisable for Surrey and Middlesex County Councils to apply for Parliamentary powers to enable them to erect a new bridge at Hampton Court and bridges over the Thames on the line of the new Chertsey arterial road. The Council approved the situa- tion of the proposed Hampton Court bridge.

New Bournemouth Housing Estate.

A syndicate has bought Branksome Dene, Bournemouth, for housing purposes. The plan- ning of the estate will be in the hands of Messrs. Jackson & Greenen, architects and surveyors, of Yelverton-road, Bournemouth.

NEW BUILDINGS IN LONDON.

Acton.—A row of shops with flats over are to be erected on a site near Acton Town Underground Station, to plans by Messrs. Douglas Smith & Barley, 50, Queen Anne's Gate, Westminster. Mr. J. Weller, contractor, Sutherland-grove, Southfields, S.W.4.

Argyll-street.—The premises at Nos. 12, 13 and 14, Argyll-street, W.1, adjoining Oxford Circus Tube Station, are to be converted into a block of offices, with shops on the ground floor, having been sold by Messrs. S. B. Clark & Son, 8, New Cavendish-street, W.1. Messrs. J. H. Phillips, agents, 24, Pall Mall, S.W.1.

Artillery-row.—A site covering about 14,800 sq. ft. is to be let on building lease, the surveyors being Messrs. Foord & Salburg, 9, Clarges-street, W.1.

Brent.—A large estate near Brent tube station has been sold by Mr. Ernest Owers, The Parade, Golders Green, N.W., for development. Houses, &c., are to be erected.

Ealing, W.—A start has been made with the Village Park housing scheme (No. 2) of 400 houses and flats for the Ealing Borough Council. The Conducal Construction Co., Ltd., Westminster, are the contractors.

East Acton.—Messrs. Eydmann, Street & Bridge, surveyors, 242, Acton High-street, W.3, have prepared a scheme for a large number of residences on the East Acton estate, W.3.

East Ham.—New shops, &c., are to be built in Myrtle-road, E.6, to the plans of Mr. R. Banks-Martin, J.P., architect, 121, Plashet-grove, E.6, acting on behalf of the East Ham Shopping Hall Co., Ltd.

East Sheen.—The Columbia Garage Co. propose to build premises to comprise lock-up garages, showrooms and flats to the design of Mr. R. B. Rowell, A.R.I.B.A., architect, 5, The Triangle, Upper Richmond-road, S.W.

Edgware.—A shopping parade, with two floors of flats above, is being erected in the Mall by Messrs. James Smith & Son, Ltd., builders, South Norwood, S.E.25. Messrs. Young & Co., steelwork, Nine Elms Ironworks, S.E. Mr. Leslie Raymond, F.S.I., surveyor, Golders Green, N.W.

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, etc.

TRADE NEWS

Lead Manufacture: New Developments.
The Associated Lead Manufacturers, Ltd., the Cookson Lead & Antimony Co., Ltd., the Lancaster, W. W. & R. Johnson & Sons, the Rowe Bros. & Co. (Bootle), Ltd., and the Brimsdown Lead Co., Ltd., who control in the United Kingdom the most important works at Newcastle-on-Tyne, London and Liverpool, for the manufacture of white lead, lead oxides, &c., have recently acquired the Harburger Chemische Werke Schöen & Co., A.G., whose works are situated in the neighbourhood of Hamburg. The German plant will, for the time being, manufacture lead oxide only. It is being brought up-to-date, and its capacity is being considerably increased, as it is intended to supply not only the German market but also the northern European markets for which the plant is well situated.

Motor Oils.

Friction is a force that can never be entirely eliminated however exactly the parts of a machine are made and assembled. It can be considerably diminished by using a good lubricant, although however refined the oil it is not free of much avail if it is not of the best consistency for the special type of motor for which it is used. Willcox's high grade motor oils are claimed to cover every individual requirement of splash, pressure, lubricating or force-feed systems, and the makers state that it will ensure satisfactory running together with economy in oil consumption and repairs.

Concrete Blocks.

The Cambridge Artificial Stone Co., Ltd., claim that their "Casco" breeze blocks lend themselves to adaption to any elevation and in the same way as bricks, but, being lighter, 18 in. by 9 in. by 8 in., they are capable of being handled and bonded more quickly. A leaflet we have received quotes the instance of one skilled man and two labourers laying 100 of these blocks in eight hours—this is equivalent to over 4,000 clay bricks. To this may be added the saving in mortar. The breeze block, too, provides a better and more natural surface for rough-cast and internal plaster.

THE SCOTTISH BUILDER

STEEL HOUSES IN SCOTLAND

The question of the increased subsidy offered for housing in Scotland is to be raised in Parliament in the course of the next few days. We understand that the exact position is that the Prime Minister, in agreement with the Chancellor of the Exchequer and the Minister of Health, has offered this increase under strictly limited conditions. The increased premium of £40 a house is only made available in respect of a maximum of 4,000 houses. But these have to be manufactured by firms who guarantee an output of at least 1,000 houses a year. The amount of skilled labour utilised is to be limited to 10 per cent. The forms of construction will, of course, have to be rigorously approved by the experts concerned. Even when these conditions are fulfilled, it rests with local authorities, and not with the Government, to decide on the number and type of the houses with which they propose to proceed.

In Scotland three types of the so-called steel houses have or are being built. Weir houses have been erected for a colliery company just outside Glasgow in addition to the demonstration houses. Houses of the type designed by the Duke of Atholl are completed at Robroyston, and are actually occupied by tenants on the Langlands estate at Govan and at Dalmauir, in addition to those that have been built for the Highlands district Committee. In Edinburgh in the course of the next few days, houses with the roof of steel devised by Colonel Peter Nissen will be built. Aberdeen, in an official report made by the Director of Housing estimates the cost of a Weir house of the Cathcart type to be £490, exclusive of the cost of transport of materials to site and travelling expenses. Weir houses of the Eastwood type to be erected by Cupar are estimated to cost about £440 per house.

Innerleithen.—HOUSING.—The Town Council has accepted tenders amounting to £5,640 in connection with the housing scheme.

NEW BUILDINGS IN SCOTLAND

Edinburgh.—SHELTERS.—The Dean of Guild Court has passed plans for a tennis shelter at Inverleith Park and a football shelter at Liberton Public Park, to be erected by the Corporation.

Glasgow.—EXTENSIONS.—A site has been purchased for the erection of Houldsworth Homeopathic Hospital at West Balgray. Sir John Burnet is the architect.

Bo'ness.—HOUSES.—The Linlithgow C.C. has arranged with the Duke of Hamilton's trustees for ground for eighteen additional steel houses proposed to be erected at Newtown, near Bo'ness.

Aberdeen.—PREMISES.—The Aberdeen Harbour Commission has passed a plan for fish-curing premises proposed to be erected at Raik-road, for Mr. J. M. Davidson, per Messrs. Sutherland & George, architects.

Perth.—HOUSES.—The Town Council has adopted a further housing scheme. The Public Health Committee recommended that the Council should take advantage of the recent offer of the Prime Minister of the additional subsidy of £40 for certain types of houses, and that fifty houses should be erected under this scheme.

Stirling.—BRIDGE.—The Central District Committee of Stirling C.C. has been informed that the cost of a bridge proposed for erection over the River Forth between the burgh of Stirling and the village of Cambuskenneth, would be £12,862, including the cost of approaches.

Hawick.—HOUSES.—The T.C. has resolved to proceed with the erection of another block of six two-roomed houses at the top of the Loan, and the burgh surveyor has been instructed to prepare lay-out plans of sites at Gladstone-street, Oliver Park, and other suitable places.

Burntisland.—HOUSES.—The Board of Health has approved of the erection of twenty houses on the Haugh site, and the Town Council are to invite tenders.

BUILDING TRADE WAGES IN SCOTLAND.*

The following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

L. CXXIX.—No. 4,321

NOVEMBER 27, 1925

THE DANGER OF A STEREOTYPED TRAINING

M R. GUY DAWBER, in his Inaugural Address at the Royal Institute, alluded at some length to the important question of education, which, as he says, is so closely bound up with the "advancement of civic architecture" that the aims of the Institute achieving the latter must necessarily include a great deal of attention to the former. The improvement in methods of training both in schools and under the system of pupilage, is at present the subject of a great deal of earnest study and endeavour on the part of the Board of Architectural Education. This, indeed, the responsibilities of which have enormously increased during the last few years, is, as we know, at present being re-estimated and greatly enlarged; and while this is an indisputable move on the part of the Institute, it is worth while considering into the growth of the school system which has made this reorganisation necessary, even if it is too early to draw from such an examination any very definite conclusions. The whole question of technical training is bound up with—almost entirely governed by—the nature of the calling to which the student is ultimately to enter. This calling is not wholly a matter of unfettered choice, for, with the will in the world, it is impossible for the man who does not possess a minimum of natural qualifications to succeed in such a difficult profession as architecture. A taste for draughtsman-ship and a feeling for the practical and constructive side of engineering operations are not alone sufficient, however highly developed, as the endowment of the man who is aiming at the execution of architecture in its fullest sense, for the architect must be a designer and creator. Nor does the born designer necessarily possess the constructive sense and the business capacity to enable his conceptions to be put into the flesh; only in a favoured few do we find the qualities of designer and constructor combined in anything approaching equal proportions.

It is, perhaps, unfortunate, but perfectly true, that some designers are more remunerative than others, and that there are capabilities which have a higher market value than others of another type, though of proportionate degree. Between the artist of eminence and his peer in the world of finance there is generally a broad gap in the matter of pecuniary reward for merit and hard work. The artist merely happens to be born into what is a less remunerative sphere. His "line" is not so good, though perhaps he has other rewards as compensation. A similar analogy we find within our own profession—these qualities of practical reward for effort. The born creator and designer is seldom the highest paid or the most successful practitioner; for the plums generally fall to the architect who is rough of an artist to recognise good work, who has enough of an organisation to ensure that he gets it, but who above all has the gift for creating confidence in his clients and producing remunerative work for his office.

The schools of architecture are a microcosm of the profession, and the students within the schools reveal the same tendencies of type, temperament, and natural aptitude. There are students who are born business men, others with a highly developed design sense, and still others whose talent very largely lies in the execution of the routine of the architect's office. There are types of men who are gifted with the personality of leaders, and others who either do not desire leadership or have not the capacity for it.

The question then arises: "With what end in view are all these men (and women) to be trained?" Are they all hoping one day to become practising architects, either independently or in partnership, or are some of them preparing for another calling—professional draughtsman or architectural assistant? And if the latter exists in any school this duality of ultimate aim, should the system of training be identical for both categories? There is no doubt whatever that there are some men who

become invaluable assistants, but who will never develop into successful practitioners on their own account. And there are, on the other hand, well-authenticated cases of famous and successful architects who, as architectural assistants, were complete and miserable failures. Looking back on their own insufficiencies and the hardships ensuing thereon, these eminent men may feel inclined to smile indulgently at their early blunders and the swift retribution from their harassed employers. But it is no shame to them to suggest that were they themselves faced with a similar incompetent from school or office-pupilage, the smile of indulgence would be a very forced one.

In comparing training at a good recognised school with that generally obtained under the pupilage system, and assuming in each case a student of average ability, there is no question whatever that in the vast majority of cases the school-trained student is far better equipped for the ultimate business of becoming a practising architect. And it is equally certain that the office-trained man has a more immediate and definite value as an architectural assistant in certain categories of office routine. The office pupil with a thorough grounding in routine such as surveys, sanitation, the Building Act, and detailing of the ordinary sort is a very useful and valuable person. So valuable that he is kept at the job of what he can do so well, while his often pitiable attempt at design are tolerated (and then, perhaps, carefully removed with rubber) on account of his prowess in other fields. Such a man, if gifted with intelligence and initiative, may develop later into a head assistant or business partner, and he is the invaluable and well remunerated standby of many eminent men who cannot possibly cope with these details if they are to carry out large and multifarious projects.

The school-man, on the other hand, may easily be a more highly sensitive designer than his office-trained employer. Accustomed to analyse, fresh from a course of theory and design, his fingers may itch to be at his employer's board, to plan and design and decorate, leaving the "dirty work" to other hands. Not realising the practical difficulties and limitations of the hard-earned "job," he sees only art for art's sake; and perhaps muddles up the door frames and bungles the drainage plan, but ultimately he simmers down and becomes a useful adjunct to the office.

Anybody concerned with technical training, such as the Board of Architectural Education, will sooner or later be faced with the question of deciding whether there is not danger, with the increase of schools and the general effort towards Intermediate and Final Recognition, of the school courses becoming stereotyped and producing only one category of student—the architect type. Is there not also the assistant type, and should he not be frankly recognised? At present he is to an extent catered for, since excellent Polytechnics and Schools of Building exist, and the fees therefor are proportionate to the less ambitious scope of their instruction, but a correspondent writing in reference to these schools, says: "These institutions may very naturally tend towards the setting up of a full architectural curriculum of schools such as London and Liverpool Universities and the A.A. Their facilities and equipment may be less complete, yet they will offer a cheaper if less thorough course, and draw students from the more specialist architectural schools. Will not this tend towards the development of a weaker type of school-trained student—the man not born to a profession and yet not trained to find a practical wage-earning career as a valuable assistant? Possibly the real value of the strength of the architectural school training lies in maintaining the existence of a few big and efficient schools, training, quite frankly, to recruit the profession of the practising architect; while other schools, equally well equipped and specialising for their purpose, train the fully-equipped assistant."

NOTES.

Architectural Competitions.

We give on p. 768 some further opinions on the subject of architectural competitions, following the opinions published last week, from which it is evident that while there is a widespread desire to improve the system, there is no general agreement how it is to be brought about. We must not forget that the subject has received a great deal of consideration by the R.I.B.A., and that we have the Institute Regulations, the Model Form of Conditions, and the Suggestions for the Guidance of Assessors, and if competitors will make the right use of those documents a good many difficulties which correspondents refer to would not arise. If the three documents we refer to require further amendment after the considerable revision that was made only last year, all that is necessary is to give notice of the amendments required and have them discussed at a general meeting. We should like further information in reference to the remarks in the case of the Manchester competition given by one of our correspondents in our last issue, that the Institute issued a statement that "no action could be taken because it would cut at the basis of the competition system." We understand that no such statement was ever made by the R.I.B.A.

The Rima Controversy.

It is a pity that in the heat of controversy people should so lose sight of proportion as to concentrate their dislike on the Hudson Memorial only, which, however much we dislike it, cannot be regarded as failing more completely than other examples of statuary recently erected in London streets. The Committee of this memorial are those at whom

the criticism should be directed. It is very hard to attack an artist because he gives us what we asked for. If the subscribers were so careless when giving their money as not to inquire how it was proposed to be used, they have no right to complain of the results. The commission having been given to Epstein, everyone acquainted with the arts knew what the sculptor was likely to give them. And it must be remembered—which can but seldom be said—that so far as the sculptor's craft is concerned, the relief is executed in the right way—more than can be said of much of the statuary occupying public sites. It is the expert who has failed us. It is the subscribers who are mostly to blame for the result, in that none of them objected to the employment of the sculptor beforehand. We do not like the memorial, but common fairness compels us to protest against those who would now wish to ruin the sculptor's reputation because he has given them what they asked for; and we have in mind the unedifying circumstances under which Gilbert suffered eclipse, and the attitude of his brother sculptors on that occasion. Artists should be very slow to attack each other, and should not join in any such proceedings.

Coloured Cottages.

IN view of Mr. Topham Forrest's announcement that he proposes to use colour in concrete houses to be built on some of the London County Council housing estates, it may be interesting to note that this idea is already being carried out by Mr. Louis de Soissons on some 500 working-class houses he is carrying out on the Public Utility Society section of Welwyn Garden City, although the methods used at Welwyn and that proposed for the London estates are different. Mr. Topham Forrest proposes, we gather, to use coloured cements—that is, cements in

which the colouring material has been incorporated by the manufacturer—at Welwyn the colour is obtained by mixing cement and pigments or by painting on the site and applying the mixture with a wash. Blue, pink, grey, and other colours are being blended together on the same streets, and those interested in the subject can see the effect for themselves at Welwyn. As Mr. de Soissons mentioned to us the other day, it was common practice in the past to colour cottages in different colours with washes, and it is hoped to get the same effect with cottages built of concrete materials.

School Building.

WE are informed that Eustace Percy, President of the Board of Education, has ordered an investigation to be made into alternative methods of building schools. Accordingly a committee has been appointed on which Sir Charles Ruthen, Director-General of Housing at the Ministry of Health, Sir Frank Baines, Director of Works at the Office of Works, Mr. G. F. H. Clay, Architect of the Board of Education, Mr. Topham Forrest, Architect to the London County Council. Both Sir Charles Ruthen and Sir Frank Baines served for the last year upon the committee presided over by Sir Ernest Bouverie, who has been inquiring into methods of building houses other than with brick. In view of the increased expenditure on school building and the urgent need that schools considered to be out of date and inadequate for modern needs should no longer be used, "it is hoped," writes our correspondent, "that this Committee will be able to recommend the use of steel, concrete or even timber building in certain areas. Mr. Topham Forrest, who made a special inquiry into the whole question of school architecture during his recent visit to the United States, has reported that in

es, is understood to be acting for the
mittee, and it is believed that at
one entirely novel form of con-
tion can be adopted with a reduction
ost of at least £10 per place."

At the interview between
onomy. a deputation of the Associa-
tion of British Chambers of
merce and the Chancellor of the
Exchequer, Mr. Machin, President of the
Association, drew attention to the increase
expenditure by local authorities from
£100,000 before the war to £160,000,000
at the present time, an increase which,
he said, was in great part due to the
constant and ever-increasing requirements
of Government departments upon local
authorities. In connection with this
subject he also called attention to the
inadequacy of the accounts of such Depart-
ments as the Ministry of Health, the
Ministry of Labour, the Office of Public
Works and the Ministry of Agriculture,
in that he stated that such accounts
do not show the costs of the
activities of the Departments enabling
criticism to be made in detail. The
Chancellor of the Exchequer in his reply
referred to the fact that whilst resolutions
pertaining to economy were supported in
the House of Commons in the abstract,
an attempt to effect economy in any
particular direction was at once stren-
gely resisted. The above observations
are food for thought. The double

system of budgeting is every year becom-
ing more open to objection. The public
eye is fixed on the national budget, but
the local budget escapes criticism and
consideration, yet the rates exercise the
same influence over industry as do the
taxes, as both high rates and heavy
taxation mean increased cost of pro-
duction.

THE above figures illustrate
Local this: In 1914 the local
Expenditure. expenditure of forty millions
represented about one-fifth
of the national expenditure, but in the
period of eleven years it had increased
by 120 millions, and now represents a
sum approaching the national budget of
those days. The proportion between the
two sums remains the same, that is, the
local expenditure still is one-fifth of the
national expenditure, but the cost of the
war and the interest on the huge debt is
represented in the national budget, and
it surely is very significant that the local
budget has kept pace with it under such
conditions. The war expenditure is
looked upon as a more or less temporary
burden which will eventually be wiped
out, but unless a halt is called in local
expenditure any relief will be more than
neutralised and in normal times the two
budgets will tend to equal one another.
It is obvious we cannot continue to
proceed on such lines and hope to retain
our overseas trade.

GENERAL NEWS

Blackpool Sea Defence Scheme.

Work has begun on a second line of defence against sea encroachment at Blackpool; it will consist of a wall of concrete rocks supporting a concrete sea wall.

Proposed Birmingham Aerodrome.

The Air Ministry propose to buy buildings and 179 acres of land at Castle Bromwich from the British Teme and Rea Drainage Board for £60,000, to be used as a site for an aerodrome.

Denaby's New Hall.

The new Epworth Hall at Denaby was opened recently. It has been built on the site of the old building at a cost of £9,800, the architect being Sir A. Gelder, of Hull.

Proposed Aldershot Military Church.

Sir Robert Lorimer, A.R.A., of Edinburgh, has been appointed architect for the Scottish Presbyterian Church which is to be built for the barracks at Aldershot. The edifice and furnishings are estimated to cost £15,000.

Proposed Birmingham Viaduct.

The Public Works Department of the Birmingham Corporation propose to construct a new arterial road, 80 ft. in width, which will cross New-street Station, and thus provide direct access from the northern to the southern part of the city.

Obituary.

The death has taken place in Belfast of Mr. Robert M. Young, M.A., of Messrs. Young & Martin, architects and civil engineers. He was a member of the Royal Irish Academy, a Fellow and twice Vice-President of the Royal Society of Antiquaries of Ireland, a Fellow of the Royal Institute of British Architects, a Vice-President and later President of the Ulster Society of Architects, Honorary Treasurer of the Presbyterian Society of Ireland, and Warden of the Royal Academy of Ireland.

St. Paul's.

Mr. Charles Ferrar, Superintendent of the grouting trials carried out in 1913-14 at St. Paul's Cathedral, and Superintendent of Works at St. Patrick's Cathedral, Dublin, and Winchester and Lincoln Cathedrals, writes to inform us that at that time a thorough survey of the building, its surroundings and subsoils was made, and illustrated by a set of 14 diagrams, &c., "which probably Mr. Harvey has never seen." Boring and grouting trials were carried out in different parts of the building during a period of nine months. The strengthening of the subsoil, by percolating it with Portland cement, was carried out from the surface down to the London clay. This was at the time pronounced a great success. It paved the way for what is now being done to the fabric, and, in the opinion of our correspondent (if the strengthening of the subsoil is carried out), provides the solution of the problem.

The Italian Renaissance.

The later art of the Italian Renaissance, especially the work of the declining Baroque spirit, which reacted from the formalism of the older work, was the subject of a lecture by Sir Banister Fletcher at the Central School of Arts and Crafts. He dealt more particularly with the work of Venice and the neighbouring cities of Vicenza, where much work was carried out by Palladio, including the celebrated Basilica built round an earlier structure, and the circular type as Villa Carra at Vicenza. Palladio was the architect of Italy most associated with English Renaissance, as our Inigo Jones, on his visit to Italy, was inspired by much of Palladio's work, and introduced his regularised type of design into this country, as seen in the Banqueting Hall, Whitehall.

In a further lecture Sir Banister dealt with the resemblances and contrasts between the Renaissance in Italy and in France. He pointed out that whereas the earlier work of France was strongly flavoured with the Gothic spirit, as in

the castles on the Loire, thus creating a transitional style, in Italy the classical tradition had been so prominent throughout even the Medieval period that the Renaissance was from the first a Roman style in nature. The differences in the positions and planning of the Italian and the French palaces were clearly brought out, and some interesting slides were shown to drive the salient points home, thus preparing the way for the more detailed study of French Renaissance architecture in his next lecture.

WAR MEMORIALS

Easington.

Mr. W. Pratt has been appointed sculptor to the local cenotaph, a granite cross surmounted by a polished sword and laurel wreaths.

Bathgate.

A memorial in the form of a 28 ft. obelisk has been unveiled at Bathgate. This forms only part of the scheme, a number of cottages having also been erected for the benefit of local disabled men.

Stockport.

The war memorial, in the form of an art gallery, has been opened at Stockport. The architects are Messrs. Halliday, Paterson & Agate. The scheme embraces a remembrance hall in which there is a triumphal marble group executed by Mr. Gilbert Ledward.

Taunton School.

Lord Eustace Percy recently opened a war memorial building, comprising science laboratories and an art section, at Taunton School, erected at a cost of £11,000 to the designs of Mr. E. Vincent Harris.

Carnoustie.

This memorial was designed by Messrs. Bruce, Son & Morton, architects, of Dundee, not Mr. Thomas Beattie, as stated in our last issue. The latter was the sculptor.

MEETINGS

FRIDAY, November 27.

Glasgow Architectural Craftsmen's Society.—Mr. A. Ling on "Antiquities of Morayshire." At the Royal Technical College. 7.45 p.m.

FRIDAY-SATURDAY, November 27-28.

Royal Sanitary Institute.—Visit to Plymouth.

MONDAY, November 30.

Royal Institute of British Architects.—A Business General Meeting. At 9, Conduit-street, W.1. 8 p.m.

TUESDAY, December 1.

College of Estate Management.—Mr. C. G. Eve on "Rating in the Metropolis." At 35, Lincoln's Inn Fields, W.C.2. 5.30 p.m.

WEDNESDAY, December 2.

Institution of Heating and Ventilating Engineers.—Mr. J. E. Boaz on "The Requirements of Ablutionary and Recreative Bathing Establishments as affecting the Heating and Ventilating Engineer." At Olympia. 7 p.m.

THURSDAY, December 3.

Institution of Electrical Engineers.—Professor S. P. Smith on "An All-Electric House." At Savoy-place, Victoria Embankment, W.C.2. 6 p.m.

Institution of Structural Engineers.—Mr. H. G. Lloyd on "A Method of Testing Concrete Blocks." At Denison House, 296, Vauxhall Bridge-road, S.W.1. 7.30 p.m.

The Auctioneers' and Estate Agents' Institute.—Mr. B. W. Adkin on "The forthcoming alterations in the Law of Property, as affecting Copyholds." At 29, Lincoln's Inn Fields, W.C.2. 7.30 p.m.

COMPETITION NEWS

Branch Library, Gabalfa.

The Cardiff City Council invite designs for a branch library at Gabalfa, to be built on a site in St. Athan-road, on the Mynachdy Estate. The competition is limited to qualified architects within the City of Cardiff. Premiums of £50, and £30. Mr. Sidney K. Green, F.R.I.B.A., is the assessor. Applications accompanied by a deposit of £2 2s., to be made to the Librarian, Central Library, Cardiff. Designs to be sent in by January 16, 1926.

Competitions Open.

Particulars published in "The Builder."	See
Argentine Institute. Premiums 10,000, 6,000, 4,000, 3,000, 2,000 gold pesos. Apply particulars, 35, Old Queen-street, S.W.1	April 24
New Buildings for Liverpool College, Mossley Hill. Sir Giles Gilbert Scott, R.A., Assessor. Premiums: £500, £300 and £200. Apply to J. H. Lintern, Secretary, Liverpool College, Sefton Park-road, Liverpool	Aug. 7
Houses for Smaller Middle-Classes and Intellectual Workers. Held under auspices of International Federation of Building and Public Works. Prizes: 1st, 500 dollars; 2nd, 300 dollars; 3rd, 200 dollars. Write to Director-General of the International Federation, 17, Avenue Carnot, Paris	Oct. 30
Art Gallery and Museum, Birkenhead. Limited to competitors practicing within 20 miles of Birkenhead since January 1, 1923. Premiums: £230, £175, £100. Sir Robert Lorimer, A.R.A., assessor. £2 2s. deposit. Apply Curator, Central Public Library, Birkenhead	Oct. 16
Australian War Memorial, Canberra. Open to architects of Australian birth. Apply High Commissioner, Australia House, Strand, London	Aug. 14
Royal National Eisteddfod of Wales, Swansea. Competitions: (1) National Parliament House of Wales (Prize, £100); (2) Street Facade to a Large Store (Prize, £25); (3) Set of Measured Drawings of Architecture (Prize, £25). Apply to General Secretary of Eisteddfod, W. Talog Williams, 24, Goat Street, Swansea. Mr. Arthur Keen, F.R.I.B.A., Assessor	Nov. 6
Incorporated Architects in Scotland: (1) Rowand Anderson Medal and £100: City Art Gallery and Museum; (2) Rutland Prize (£50) for Study of Materials and Construction; (3) Prize (£10 to £15) for 3rd year Students in Scotland; (4) Maintenance Scholarship, £50 per annum for 3 years. Apply Secretary of the Incorporation, 15, Rutland-square, Edinburgh	Nov. 6
Plan for construction of Conference Hall, for League of Nations, Geneva. International Competition, Sir John Burnet being British representative on Jury of Assessors. 100,000 Swiss francs to be divided among architects submitting best plans. Programmes with R.I.B.A., 9, Conduit-street, where intending competitors should apply. Single copies from Secretary-General, League of Nations, Geneva, on payment of 20 Swiss francs.	Jan. 2
*Guisborough Proposed New Hospital

ARCHITECTURAL COMPETITIONS

PROFESSIONAL OPINION.

We published last week the views of a number of architects on the question of architectural competitions. Some further opinions are now given.

Mr. Cyril Farey said that, in his opinion, the conditions of architectural competitions should be as elastic as possible. If they were too rigid, the tendency was to produce designs that were all more or less alike. He thought that there ought to be a clause in competition conditions to say whether or not the assessor was going to stand by them inflexibly or whether any latitude would be allowed to competitors. Hitherto, he had preferred the jury system to the single assessor, but recent experience had rather shaken his confidence in it. A weakness of the jury system was the possibility of members "bargaining" with one another over any points at issue, whereas the single assessor, having no one to fall back upon, and being under the necessity of making his own decisions, was apt to take his duties very seriously. Mr. Farey thought that more of the younger men ought to be allowed to have a chance in limited competitions. There were many young men, whose work was known and who might be given a chance. The R.I.B.A. would know of such men and would have confidence in recommending them as capable architects. Referring to the costing of competitions, Mr. Farey said it would be a decided improvement if competitions could all be put upon a uniform basis—to say, for instance, that a building should contain so many cubic feet rather than that it should cost so much. Competitors often produced an elaborate design and gave a ridiculous price per

HOUSES OF PARLIAMENT.—East Front, South Water Towers, north side of north tower above Terrace: Detail of Anston stone shaft, showing fracture along horizontal plane.

foot cube. It would be far better to say that the building must contain so many cubic feet and give a price to work to. Competitions should provide for a minimum number of drawings.

We have received the following comments from a correspondent:—

Messrs. A. W. S. and K. M. B. Cross's suggestion for a revival of the Competition Reform Society is (he says) peculiarly unhelpful. The Society was wound up because the Competitions Committee took on its work and acted on its principles. The R.I.B.A. can now speak for the whole profession in its control of competitions, and it is for the general body of members to make any reforms in the system that really commend themselves to the majority. An outside and independent body would have no authority, would only represent a section of opinion, and would produce confusion of thought and action. The Court of Appeal is an old suggestion which, our correspondent believes, has never commended itself to the majority of competing architects. It would probably result, he thinks, in a discussion of practically every important award. And what about the promoters? Would they agree to submit awards to this Court? If they were permitted to appeal to the Court it would cut at the root of the Institute's work of many years in insisting on promoters accepting the awards of professional assessors. If they were not permitted, it would be an obvious injustice that they (the parties chiefly concerned) should be the only persons with no right of appeal. As to the appointment of assessors, Messrs. Cross speak as though all the appointments were made by the R.I.B.A. This is quite a mistake. Most assessors are not appointed either directly or indirectly by the R.I.B.A. In the Manchester case, for instance, the R.I.B.A. had nothing to do with the appointment. The suggestion that the selection of the assessors should be made by the Council of the R.I.B.A. is, our correspondent thinks, an unworkable one. Such selection would have to be made by a Council of over fifty members meeting once a month in Conduit-street. Nomination of assessors has to be done promptly and it has to be done by a responsible person who has very adequate means of finding out who possess the right qualifications for particular appointments. A large and floating Council has not got the necessary knowledge and cannot frankly discuss the delicate personal questions that inevitably arise in the selection of assessors. Messrs. Cross say that "under the present method of appoint-

ment one was often confronted with the anomaly of an assessor who had never designed a building of the type required judging the designs submitted by men who were specialists." So from this being often the case, can they (in our correspondent's opinion) give one example of an assessor appointed by the P.R.I.B.A. in the five years in which this was so? Prof. Richardson disagrees with Messrs. Cross as to the merits of the jury system. His suggestion for selection for limited competitions is (in our correspondent's opinion) beside the mark. Do you imagine that they are selected by the R.I.B.A.? On the contrary, they are practically always selected by the promoters and the R.I.B.A. knows nothing about it unless an announcement is made in the Press. Does he suppose that the R.I.B.A. made a "rota" list, as he suggests promoters, bank managers, boards, and so on, would come to the R.I.B.A. and ask for names from the list? It is quite unlikely that they would do anything of the sort. It appears, as a matter of fact, to invite architects with whose works they are personally acquainted and it would be impracticable, even if it were reasonable, to prevent them from doing so.

Bermondsey Slum Problem.

It is stated that 4,000 families in Bermondsey are willing to move out to a "satellite" town should this be established outside London. Three conferences have recently been held in the borough of Bermondsey, with local manufacturers, religious organisations, and social workers, in order to discuss the policy of building cottages instead of rehousing by means of flats, and particularly the proposed tenement flats.

THE HOUSES OF PARLIAMENT

CONDITION AND REPAIR OF STONEMWORK

the following facts concerning the condition of the stonework of the Houses of Parliament proposed methods of repair are extracted from Sir Frank Baines's recent report on the subject to Members of Parliament:—

It must be clearly stated (says the report) that the general structural condition of the buildings, and its foundationing, &c., are quite secure. Sir Charles Barry's specification for the buildings described the quality of the stone, but left it to the competing contractors to make surveys of the quarries, upon which to base their estimates. Had any systematic inspection of the stone been undertaken on the architect's behalf, either at the quarry or at the site, this arrangement would probably have led to endless disputes. Three Commissioners, including the architect, made an extended tour of quarries, and they reported that they had satisfied themselves of the existence of an abundance of stone of excellent quality. In actual fact, the difficulties afterwards experienced showed that it was impossible to obtain stone of sufficient quantity, of good bed, or of satisfactory quality. When Bolsover Moor Quarry was opened, for example, it was found to be unfit to produce stone required. The beds were thin and irregular; and, in fact, very little, if any, stone from this quarry was used for the buildings. Stone of somewhat similar composition was obtained at Sykes' Quarry, at Anston, Yorkshire, which was afterwards used for the work; but one difficulty was found in getting stone of the required size; as a consequence stone was afterwards supplied from a quarry at Mansfield, 15 miles away. Here, again, stone of the required size could not be obtained in satisfactory blocks, and as to size or quality. Finally, the order was given to fall back on the Anston quarries.

The first of the Anston quarries opened up, namely, the Northfield Quarry, was worked for twelve months, and quarrying was transferred to the South Side Quarry. One of the Commissioners appointed to consider this matter agreed that some of the stone sent up for building should have been rejected; but he held that good stone might have been sent instead of bad. He admitted that when he visited the quarry he found stone in active use in certain of the beds of the quarry that were being worked for the Houses of Parliament. Quarrying was apparently left to piece-work, at a competitive price per foot cube; and advice given before the 1861 Committee indicated that the stone was taken as it came in the quarry, without selection, and that there was no one installed there to lay down any reliable standard of quality. Price and quality of working determined the matter as the contractors were concerned, and very little stone was rejected.

Generally, the evidence given before the Committee shows an entire absence of any consideration for the selection of stone; it is that nearly every error and omission was made with regard to the method of obtaining the stone; and that not only was the best possible kind of stone selected, but that much actually used was perhaps the worst and most perishable of its kind. The elements for the getting of the stone, and the lack of supervision, allowed of the arrival at Westminster and the entry into the work of building of stone, good, bad or indifferent, all came to hand. The surprising fact is that among the several stones upon which the contractors were invited to tender in the Third Contract in 1840, is Darley Dale, the most durable sandstones of this

stone selected was a magnesium limestone, i.e., chemical combination of lime and magnesia; this stone has certain inherent qualities quite apart from its general defect of being most subject to decay as a result of atmospheric attack.

The report of the Committee of 1861,

appointed to inquire into the decay of the stone in the new Palace of Westminster, is the only account we have of the decay that occurred before that date. The Committee stated that decay would appear to have begun seven years after the commencement of the work, and that it was not solely attributable to the stone not being placed upon its natural bed; that the decay was mainly on plain surfaces and not on the elaborately wrought portions. The Committee make no reference to the evidence of Mr. Wardle, namely, the "venty" defect of the stone, but merely refer to surface decay. The suggestion that decay is worst upon plain surfaces is not in accordance with the facts in evidence to-day.

Certain stone preservatives were tried as a result of the Committee's deliberations, and Sir Charles Barry selected six processes, of which some record is left; but the opinion was expressed that no evidence had been given to the Committee of 1861 to cause them to believe that decay had been arrested or prevented by any of the methods of preservation applied. A Sub-Committee of Chemists was formed to consider the matter, which they did at some length; but they had no important recommendation to make as regards overcoming the chemico-physical decay of the stone, nor did they raise any question as regards the primary defects of the magnesium limestone.

Any system of repair must guarantee:—(a) That the general architectural design of the building shall not be altered. (b) That the character of the elaborate decorative detail, and its intricate Gothic ornament, should be essentially preserved. (c) That materials for repair and renewal must harmonise with the existing stone. (d) That such materials should be more durable, less liable to attack by atmospheric acid impurity, and free from the natural and inherent faults of cleavage, lamination, &c. (e) That the faulty methods of construction in the existing building should be eliminated as far as possible.

The recommendation to be made is to use one of the Derbyshire sandstones for repair and renewal of the defective magnesium limestone; this has the support of Mr. J. Allen Howe, of the Geological Museum. This stone is geologically a close-grained micaceous grit, one of the very best of the sandstones quarried for building and other purposes, from the millstone grit formation, which, together with other carboniferous formations, form the wide mountainous range stretching from Derbyshire to the Cheviots. From its chemical, physical and aesthetic qualities, such a stone is admirably adapted for architectural, engineering and sculptural work. It has great strength, density and impermeability, and has even been exported to Canada and the United States in the form of millstones for grinding wood pulp in paper-making. Such stones are subject to excessive internal stresses, while revolving at roughly 450 revolutions per minute. The stone is one of the few that can resist these stresses.

It has a pleasant, homogeneous colour, crisp, clean texture, freedom from vents, faults, blotches or streakiness. It contains 96.40 per cent. of pure silica, and only 0.36 per cent. of carbonate of lime. Its moisture content and voids are as low as 1.94 per cent., the rest of its constituents being iron and alumina. There is no carbonate of magnesium in the stone; the mica content is not excessive, and is present as diffused, minute spangles thoroughly disseminated through the body of the stone. So free is it from liability to acid attack, that solid blocks of this stone are cut and used for storing strong sulphuric acid. Its crushing strength varies between 644 tons and 695 tons per sq. ft. of area. Buildings erected of this stone in London are found to be free of decay. Buildings in the provinces, such as St. George's Hall, Liverpool, erected in 1840, are found to be in perfect condition, and would not appear to have suffered from any observed effect of

HOUSES OF PARLIAMENT.—East Front, north Central Water Tower, N.E. Turret, base of cupola: Showing disintegration of large fragment of stone from lower part of grotesque figure, due chiefly to action of sulphur acids. Illustration shows effect of tremendous pressure set up by oxidation of iron cross bars bedded in joint at base of cupola.

atmospheric attack in the whole period of their exposure.

The stone is much harder to work than Anston, but by experiment it has been ascertained that the stone can be worked satisfactorily into the Gothic detail of the Houses of Parliament.

A return is quoted in official documents to the effect that the Houses of Parliament cost, up to the time of 1860, an amount of £2,198,000. After that date certain additional work was done, such as the erection of the Colonnade in New Palace Yard (where Portland stone was used instead of Anston) and other work to St. Stephen's Crypt, &c. The total cost could scarcely have been less than 2½ millions, although the original estimate was a sum of £814,984. An attempt has been made to arrive at a figure of cost of such a building erected to-day, and after appraisements have been made in respect of the difference in hours of labour and wages of operatives (which were, respectively, ten hours a day, and 6d. to 6½d. per hour for masons), a figure of over twelve millions sterling is arrived at, which is considered to be a reasonable estimate of the cost of the building if provided at date.

The question of the estimate for the repairs is an extremely difficult one, and depends upon the ultimate decisions which will be arrived at with regard to the renewal of all details in exact particular. Such a cost of repair would be approximately 8 per cent. of the estimated cost of the provision of the whole of the buildings at the present time; and as this cost will, in all probability, have to be spread over an extended period of years, say, from twelve to fifteen years, this would mean that for the next twelve to fifteen years approximately ½ per cent. of the present day value of the building would require to be expended each year on the preservation and repair of the external fabric, and at the end of that repair the life of the building will be certainly equal to that of a new building erected at date.

THE ARCHITECTURAL ASSOCIATION

MR. H. S. GOODHART-RENDEL, F.R.I.B.A. (President), occupied the chair at a general meeting of the Architectural Association, at Bedford-square, on Monday.

Before the proceedings of the evening a vote of condolence to H.M. the King and members of the Royal Family was passed in silence.

The Treasurer (Mr. Gilbert Jenkins) then presented the accounts for the session 1924-5, which showed a satisfactory financial balance. The Association had, in fact, been able to pay £400 off their Debentures in addition to the usual £500.

New Members.

The President announced three nominations for membership, and the following were elected members:—

C. H. Brightiff.
T. F. Strubington.
J. B. Bayly.
H. B. Chisholm.
Miss B. Rowlands.
R. B. Riviere.
D. W. Rawnsley.
Miss E. E. Comber.
R. A. Hernu.
H. S. Chen.
G. E. Bowden.
R. D. Scott.
R. de Winton Aldridge.
Miss B. J. Read.
H. W. Berry.
M. H. Egan.
L. D. Harris.
Miss N. Aitor.
C. C. Pither.
H. M. Ross.
D. Booth.
D. M. Duggan.
E. G. S. Elliott.
C. J. Burlison.
A. R. Twentyman.
E. H. S. Souster.

S. W. Hinxman.
L. Beck, Junr.
L. S. Gilbert.
A. R. Branchley.
D. D. S. Stokes.
Miss M. F. Archer.
H. E. W. Spurr.
G. R. Beveridge.
Miss B. A. Blades.
J. Macgregor.
A. Murphy.
D. H. M. Carter.
H. A. Crossley.
R. F. R. Day.
D. R. Llewellyn.
G. M. Kingsford.
H. J. Ashwell.
P. Fielding-Ould.
Miss M. I. Spencer.
H. E. B. Cavanagh.
A. S. Pilickowski.
D. G. Cutler.
T. H. Peddie.
H. Ellis.
C. S. M. Davidson.

The A.A. Excursion to Sweden and Denmark.

MR. MANNING ROBERTSON then gave an address on the A.A. Excursion to Sweden and Denmark in the summer of this year, illustrating the buildings to which he referred with lantern slides made from photographs taken by Mr. F. R. Yerbury, Secretary to the Association.

In his opening remarks, the lecturer said in the first place he thought it should be mentioned that the success of the visit was due in a very large measure to the spadework that had been silently and unostentatiously put in by Mr. Yerbury. The Danes and the Swedes were alike in that they were both exceedingly cheery and hospitable peoples, but he thought they all realised that their more than cordial reception in both countries must have been due at least as much to friendship with Mr. Yerbury as to their own *beaux yeux*.

He hoped the visit might be the forerunner of a more active interchange of thought between Scandinavia and themselves than had hitherto existed, and that architects and others, when they were making plans for foreign travel, would include Denmark and Sweden in their programmes, not forgetting that, if they were bad sailors, they could get there overland through Holland and Hamburg.

His third point concerned the Town Hall at Stockholm, for that building, which was only opened in 1922, in size, position, and importance must take precedence of anything else they had seen. He wanted to warn people against forming any judgments of this building from photographs, or from second-hand impressions—they must see it for themselves. It was easy to criticise it, and the criticisms sometimes reminded one of the man who stood before a masterpiece of painting and found fault with the drawing, the colour, and the details, and asked what was beautiful about these—the answer was, "The beauty is in the picture." In the Stockholm Town Hall there was, to his mind, no doubt whatever that they had an art creation that ranked with the greatest that the world had ever seen, and that Ragnar Ostberg's monument took its place quite naturally among those peaks that such men as Michel Angelo,

Shakespeare, and Beethoven knew how to erect. That such a phenomenon in any branch of art should occur to-day, under their eyes, was extremely remarkable; but there it was.

The lecturer then traced on a map the route taken by the party, and his interesting comments on the buildings shown in the excellent photographs, must have made many who had refrained from doing so wish they had made the trip. His occasional references to the hospitality accorded by their Swedish and Danish confrères certainly convinced us that they had had a thoroughly enjoyable time.

The lecturer pointed out the resemblance of Scandinavian domestic architecture to much of the work of a similar nature to be found on our own East Coast, and illustrations of Danish housing schemes revealed many of the features to be seen on such schemes as Welwyn and elsewhere. Some blocks of flats also, as the lecturer pointed out, were very like the blocks proposed to be built by the London County Council.

In moving a vote of thanks to the lecturer, Mr. C. H. James said apart from the magnificent Town Hall and Police Court at Stockholm, he was much impressed by the extremely high level of Scandinavian architecture generally. Copenhagen was probably the finest capital city in the world—they apparently had no Regent-street in Copenhagen, where the excellence of the street architecture was quite amazing. It would be an education for any architect or craftsman to spend a few months in Sweden, where not only the architecture but the craftsmanship was of a very high order. Even in hotels, where they did not expect to find the best kind of table and glass ware, the standard was considerably higher than in this country, and even in the cheap restaurants exquisite goblets were provided.

Mr. Fant, a Swedish architect, and Mr. Jacobson, Danish Vice-Consul in London, expressed the appreciation of the Danish and Swedish nations of having had the opportunity of welcoming the party, and expressed the hope that the A.A. might decide to pay another visit to their country in future.

The President said one of the things which particularly struck him after listening to the address—unfortunately he had not been able to accompany the party—was the fact that the people in Sweden and Denmark liked architecture, and there seemed to be nothing in the buildings; that was not there because the people liked it; whereas in London one seldom saw anything which the public cared two straws about. There was a strong traditional feeling running through all the work, and it seemed that the architects did not only what they liked doing themselves, but also what the client liked, and what the people liked. The essence of architecture was to be likeable, and in that sense the Scandinavian people seemed much ahead of the rest of Europe.

The vote of thanks was then put to the meeting and accorded with acclamation.

In the ensuing discussion Mr. P. H. Adams said he had travelled extensively in Scandinavia, and would particularly like to recommend a visit to the Dalecarlia district, in which the Swedish spirit seemed to be more exemplified than in the parts visited by the A.A. party. In Dalecarlia the old Swedish buildings and customs and costumes were still in existence, and the whole atmosphere was one of pre-Dickensian times. Properly to understand the people one ought to read the literature of the country, and he recommended a study of the work of the first Swedish novelist, Selma Lagerlof, excellent translations of whose works could be obtained.

Mr. W. A. monier, Mr. E. J. Lutyens, and Mr. Cecil Smith also took part in the discussion, to which the lecturer briefly replied.

During the evening a hearty vote of thanks was passed to the Danish and Swedish architects and others who had made the visit so enjoyable.

VENICE IN THE MAKING

SIR BANISTER FLETCHER, in a recent lecture at the Central School of Arts and Crafts on the great city of the Adriatic which he said, Londoners, with certain necessary variations, might without undue pride appropriate to themselves. Like Venice, our city was born, dependent for centuries on its sea. But besides the sea we had the river, "water was the chief town planner of and gave her the finest curved street in the world," the same might be said of the Thames as it swept round from Blackfriars Bridge to Westminster. "Earth hath not anything to show more fair," was the poet's feeling when he crossed Westminster Bridge in the early morning. Venice introduced the horizontal line of a sea site; we had done that in Somerset House and the new County Council House, and were doing the same in a hundred rising buildings. But there was one difference. While the Doges "tore down buildings" to make a great piazza, a frame for the glowing picture of the facade of St. Mark's, we allowed our own St. Mark's to be built on a far finer and more commanding site than any Venice could show, to be enclosed within towering warehouses, which robbed it of much of its grandeur. Venetian architecture was set free by the sea from military so while other cities had walls, bastions, gates of stone, sea-girt Venice was free to develop as fancy led her, and thus the lovely della Carta was a very different thing from a grim gatehouse flanked by towers and protected by a portcullis. Thus, the only use that Sanaovino could find for his developed Renaissance Loggetta, was as a vestibule to the soaring Campanile; while the architects Lombardi, Buonaiuti and Savio lavished their work on the Procuratie Vecchie and on churches voted by the Venetian government. The beautiful old library of St. Mark's has been declared to be "the crowning triumph of Venetian art."

LLUSTRATIONS

St. Martin's House, St. Martin's-le-Grand.
 The building is now in course of erection on the General Post Office site, with frontages to St. Martin's-le-Grand, Gresham-street, and Cheapside; it is being built by the St. Martin's-le-Grand Property Company, and will, when completed, be available for letting as shops, offices and showrooms. The building covers a site of 21,800 superficial feet. The accommodation comprises lower ground floor, ground floor, and upper floors, all available for offices and showrooms, with shops to main frontages on the ground floor. The upper floors are all well lighted and are served by four staircases with lifts and two goods hoists. The construction throughout is of fire-resisting materials and the building is being erected under the Steel Frame

Act, with Portland stone fronts to St. Martin's-le-Grand and Gresham-street. The architects are Messrs. Gunton & Gunton, F.F.R.I.B.A., and the general contractors are Messrs. Rice & Son, of Stockwell-road, S.W.9. The consulting engineers are Messrs. S. H. White & Son, and the structural steelwork is being carried out by Messrs. Redpath Brown & Co., Ltd.

New Premises for the Westminster Bank, Ltd., Cheapside.

This building now being completed, occupies a position at the south end of the old Post Office site at the junction of Cheapside, St. Martin's-le-Grand and Newgate-street. The lower portion of the building is to be occupied by the bank, and the upper floors, which are well lighted, will be available for offices. The architects are Messrs. Gunton & Gunton, F.F.R.I.B.A., and the general contractors are Messrs. Prestige & Co., Ltd. The principal sub contractors are—Steel construction, Moreland, Hayne & Co.; fireproof flooring, stair construction, wall tiling, marble and terrazzo pavings, Diespeker & Co., Ltd.; sanitary fittings, W. N. Froy & Sons, Ltd.; heating and ventilation, Benham & Sons, Ltd.; carving, Farmer, Brindley & Co.; iron staircases, Safety Tread Syndicate, Ltd.; fibrous plaster, Plastering, Ltd.; lifts, Penrose Lifts, Ltd.; electrical work, Francis Polden & Co., Ltd.

Cheapside Land Development Co., Ltd.

The building now being erected on the old General Post Office site between Messrs. Courtauld's new building and the new premises of the Westminster Bank is being built by the Cheapside Land Development Co., Ltd., of 3 and 4, Lothbury, E.C., and will shortly be available for letting as shops, offices and showrooms. The building covers a site of 21,800 superficial feet, and has its main entrance in St. Martin's-le-Grand and two other entrances, all with stairs and lifts, on the Foster-lane front.

The principal frontage, to be over 80 ft. high, is to St. Martin's-le-Grand, where it will be faced with Portland stone. The accommodation comprises lower ground floor, partly for offices and partly for warehouse purposes; ground floor, with main entrance leading to the spacious hall, which, set in the middle of the frontage, is flanked by shops on either side. The whole of the ground floor, with the exception of the shops, is available for offices or showrooms, and the same applies to the six upper floors; these are well lighted and are served by three staircases, four lifts and two goods hoists. The construction throughout is of fire-resisting materials, the frame of the building being of steel, with brick and stone walls and hollow tile floors. The architects are Messrs. Gunton & Gunton, F.F.R.I.B.A., and the general contractors Messrs. Arthur Vigor, Ltd. The consulting engineers are Messrs. S. H. White & Son. The principal sub-contractors are—Steel construction, Redpath Brown & Co., Ltd.; heating and ventilation, Rosser & Russell, Ltd.; electrical work, Francis Polden & Co., Ltd.; floor construction, Caxton Floors, Ltd.; well-sinking and water supply, Le Grand Sutcliffe & Gell, Ltd.; metal windows, Henry Hope & Sons, Ltd.; marble, terrazzo and tiling, H. T. Jenkins & Son; ornamental metal work and stone carving, H. H. Martyn & Co., Ltd.; lifts, Waygood-Otis, Ltd.; sanitary fittings, Mellows & Co., Ltd.

New Offices and Showrooms of the Gas Light and Coke Company.

The Gas Light and Coke Company have recently opened a showroom, district office, fitters' depot, and stores, at the corner of Seven Sisters-road and Hornsey-road, where the public may find a large selection of lighting fittings and shades; gas cooking appliances of all descriptions; gas fires suited to every style of furnishing and decoration; gas geysers and hot-water circulators; gas-heated wash coppers; gas-heated irons; and numerous other domestic and industrial labour-saving appliances. A feature of the establishment is a public lecture room in which practical lectures and demonstrations in economical gas cookery are given by members of the Company's staff. The architect responsible for the design and arrangement of the new building is Mr. H. Austen Hall, F.R.I.B.A., while the decoration and furnishing of the showrooms have been carried out by Mr. W. J. Tapper, F.R.I.B.A. Messrs. Dove Bros., of Islington, were the contractors.

New Wing, Hospital of St. John and St. Elizabeth.

The newly-erected "Tetley Wing" at this hospital, which is in Grove End-road, London, contains a complete operation suite comprising the following:—1, Operation Theatre; 2, Anaesthetic Room; 3, Sterilising Room; 4, Wash-up Room; 5, Surgeons' Disrobing-room; 6, Surgeons' Dressing-room; 7, Nurses' Dressing-room; 8, Store. The operation theatre has a terrazzo floor and walls finished with Keene's cement and enamel painted. The warming is by means of hot-water swing radiators supplemented by electric heating. Ventilation is provided by an electric fan which propels the air in from outside through a gauge filter to the back of the swing radiators and an exhaust fan fixed on the roof. By this means the air of the theatre can be completely changed five times in the hour. The only fittings in the theatre are the instrument case, which is made of nickel-plated metal with glass doors and vitrolite shelves, two lavatory basins for the surgeons, one for the nurses, a sink for taking drippings from the taps of the water sterilisers, which are fixed in the adjoining room, a rail for towels, clips for small bowls, and a vitrolite shelf for gloves, lotions, &c. The light over the table is the "Scalytic" lamp. This consists of a 100-watt electric lamp enclosed within a dioptric lens mounted in the centre of an inverted metal saucer, around the rim of which are a number of silvered reflectors fixed at an angle in such a way as to throw an inverted cone of light

Second Floor Plan, Proposed New Premises, St. Martin's-le-Grand.

MESSRS. GUNTON & GUNTON, F.F.R.I.B.A., Architects.

concentrated on the table. The bottom of the fitting is closed by a screen made of specially toughened glass which can be removed for cleaning. General lighting is provided for by ordinary pendants, and in addition there are two plugs for power current for use with radiators, and a plug for attaching to the diathermic apparatus.

The anaesthetic room is entered from the corridor by folding doors, and communicates with the theatre by a sliding door. The large vertical window is fitted with a dark blind, which runs in grooves at sides and bottom. A sink and lavatory basin are provided and a cupboard for storing the necessary apparatus used. This room is intended to be used when required for minor operations. The sterilising room is next to the theatre and communicates by a swing door. Here are the hot and cold water sterilisers, saline water apparatus, and the instrument and glove sterilisers. All the above are heated by electricity. The bowl steriliser is heated by gas. Under the instrument and glove sterilisers is fitted a cupboard with vitrolite shelves and top.

The wash-up room.—In this room are four sinks—one for instruments, one for towels, one for bowls, and one for mackintoshes, each with its proper draining boards. There is also a large gas-heated steriliser for dressings, and a cupboard for linen, and various other things required for use in the theatre. The surgeon's disrobing room is a small space partitioned off from the corridor with a door leading directly into the theatre, and one into the corridor. In this room is a sink with cold water supply, and in this sink the surgeons deposit their gloves (overalls and other things on the floor) before going into the dressing-room. The dressing-room is fitted with lockers for the various members of the staff, a table, a fixed writing desk for the record of operations, and attached is a lavatory, a shower-bath, and a w.c. The nurses' dressing-room is provided with two wash basins, and a large cupboard for overalls, &c. The store is provided with a cupboard, and with racks for the dressings. The building was designed by Messrs. Young & Hall, with whom Mr. Binns, F.S.I., the surveyor to the hospital, was associated as joint architect. The

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the views of correspondents, who will oblige us if they will state their views as briefly as possible.]

Waterloo Bridge.

SIR,—Your editorial comment fails to do justice to the point raised in Mr. Davidson's letter to Sir Reginald Blomfield, in his letter to *The Times*, was surely criticising the work of a fellow-architect. He was criticising and severely criticising Sir Edwin Lutyens's Report, and your letter was not merely an expression of opinion on a matter of public importance. Few have heard or read his remarks at the opening of the R.I.B.A. can have read his letter in *The Times* without surprise at an action so entirely contradicted sentiments so recently expressed. "WATERLOO BRIDGE."

[We can only repeat that Sir Reginald's objection was to architects criticising in the Press the executed work of their professional colleagues.—ED.]

St. Paul's Cathedral.

SIR,—The advice given by Mr. A. Henry Stott in his letter to *The Builder* of November 19, is original and valuable; but the cost of demolition and rebuilding of the Cathedral would be very great. Is it possible to imagine that Wren would have set to work to build a fabric without first working out the weaknesses, and strains that would be required to be provided for, especially as he was a mathematician? Another thing to be taken into account, as regards the settlements in the building, besides the unsound site, is "gravitation" during the course of time.

ANDREW SOU.

"The Association of Architects and Surveyors"

SIR,—The "recently-established Association of Architects and Surveyors" to which I referred in my letter to you of October 19, was the Association of Architects, Surveyors and Technical Assistants. I do not suppose anyone confused the two bodies, but it may be well to put the fact on record.

HARRY BARNES.

Chairman of the R.I.B.A. Registration Committee

The Trade of Art.

SIR,—I have read the letter of the Chairman of the R.I.B.A.'s Registration Committee published in your issue of the 23rd ult., and it is to me a surprise to find it so full of criticism of this body of persons that takes upon itself to talk about and advise about and report about architecture, on matters architectural? are they that disport themselves in such an infallible manner? Do I ask a question (Well, perhaps not.)

The R.I.B.A. has been of inestimable service to the good old commercial Britain, having as it has more than has any other body of persons, to the architecture from a mere art to a fine art, and is it, then, surprising when, in pursuing this policy, there are those who gaze upon registration, perceiving therein at least the consummation of a tradesman's ambition. Is it surprising? (Well, perhaps not.)

And let us stroll in the recently enhanced fashionable shopping centres of London, admire the genius by the outward manifestation of its busy-being, namely, by that of "Futurism" compilation. The scene is such that it fails to uplift me. Everywhere, almost everywhere, is such a wealth of squandered opportunity, startling unrevelation and effete (quite apart from the difficult and hence unsolved problem of the glass shop frontage) I am buoyed within myself to reflect that although in the fullness of time one may engage upon architecture, it ever remains engaged upon architecture.

But what has this to do with the Registration? I have strayed from the point! (Well, perhaps not.)

London.

LEGAL SECTION

NOTES ON CURRENT CASES

Workmen's Compensation—Bankruptcy.

SECTION 5 of the Workmen's Compensation Act, 1906, contains provisions intended to secure the workman where the employer becomes bankrupt or makes a composition with his creditors and, if the employer is a company, has commenced to be wound up. To such cases the amending Act of 1923 in section 19 has added the case where a receiver has been appointed on behalf of the holders of any debentures secured by a floating charge or possession is taken by or on behalf of those debenture holders of any property comprised in or subject to the charge. The scheme of the Act is that where the employer has entered into a contract with insurers then on the bankruptcy, winding-up, etc., the rights of the employer against insurers in respect of any liability under the Workmen's Compensation Acts shall be transferred to and vested in the workman and "upon such transfer the insurers shall have the same rights and remedies and be subject to the same liabilities as if they were the employer, so however that the insurers shall not be under any greater liability to the workman than they would have been to the employer."

By section 5 subsection (2) of the Act of 1906, if the liability of the insurers to the workman is less than the liability of the employer to the workman, the workman may prove for the balance in the bankruptcy, &c. Where there is no contract of insurance made by the employer, then by subsection (3) certain preferences and priorities are given to the workman in the bankruptcy, &c. This subsection has been redrafted in the amending Act of 1923 (see the First Schedule to that Act), and under the amending Act the preference is no longer limited, as under the principal Act, to £100; but it has been held that the amending Act has no retrospective action to cases where the winding-up proceedings commenced before the amending Act came into operation—that is, January 1, 1924 (*Clemmons Aluminium Company, The Builder*, December 12, 1924; 41 T.L.R. 138; *Snowdown Colliery, Ltd.*, 1925, *Weekly Notes*, 64).

The case we are about to refer to, *Pailin v. Northern Employers Mutual Indemnity Company, Ltd.* (1925, 2 K.B. 73), did not turn upon the amending Act as it was treated as under the principal Act, but the question decided was, what is "a contract of insurance" within the meaning of the section? and we are confining our observations to the facts relevant to that point.

The accident had occurred in February 1913, the workman then being under age. On October 21, 1921, a receiver had been appointed on the application of debenture holders of the Colliery Co., the employers in this case, a case only falling within the Amending Act when it came in force January 1, 1924, but no point arises as to this.

The Colliery Company were members of the Indemnity Company, but the articles of association of that company provided a different system of indemnity for what were termed "Extraordinary Accidents" and "Ordinary Accidents"; the former were accidents resulting in death, and these were borne by an "Extraordinary Accident Fund" formed by calls on all members of that class, each assured paying a premium to be relieved of greater liability; but the "ordinary accidents," of which the accident in this case was one, were paid out of an "Ordinary Accident Fund," formed in the first instance by calls on each member, but as to which an account was kept for each member credited with his calls but debited with the sums paid for his accidents, and when a debit was shown a special call was made on that member to make up the deficiency.

In March, 1921, when the workman had attained 21, the compensation amounted to a

weekly sum with war additions of 35s. a week, and this was paid by the Indemnity Company to the workman on behalf of the employing Colliery Company; but in August, 1921, the Colliery Company had fallen into arrears in their contributions to the Indemnity Company, and by a resolution their right to further protection was cancelled and the payments to the workman ceased on September 18, 1921.

The claim in this case was a claim by the workman against the Indemnity Company for compensation due at 35s. a week from that date.

Various points arose on the appeal to the Court of Appeal, the first being whether under the articles regulating the "ordinary accidents" there was any insurance at all in the proper sense of the term, and the Court held that this was not insurance proper; no indemnity was provided by the members generally against any such compensation, but the compensation had to be really provided exclusively by the member whose workman suffered the accident, an account being kept as against that member which he could be called upon to keep in funds. Lord Justice Scrutton tersely summed up the point thus: "The insurer is an indemnified agent not an indemnifying principal." The "extraordinary accident scheme" was a scheme of insurance in the proper sense of the term, as there the assured paid a premium to be relieved of greater liability, the losses being paid out of a fund formed by calls on members of the class, but this case did not fall under that scheme.

The effect of the decision can be summed up in a few words of Lord Justice Scrutton: "For the reason (1) that as regards compensation for ordinary accidents there is here no insurance but only payment by the Company as agents for employers who must indemnify them" (this is the first point explained above); "(2) that if there is assurance the liability of the employers has been effectively terminated, and, therefore, the workman can recover nothing; (3) that anyhow the insurance company would be protected by set-off; in my opinion the appeal succeeds, and judgment must be entered for the insurance company with costs here and below."

This third reason refers to subsection (1), the latter words of which provide that on transfer to the workman of the rights of the employers as against insurers, the insurers shall have the same rights and remedies, and be subject to the same liabilities, as if they were the employer; so however, that the insurers shall not be under any greater liability to the workman than they would have been to the employer; but it was only Lord Justice Scrutton apparently who alluded to this right of set-off. In the case under consideration not only had the liability of the Insurance Company been terminated, but the account of the employer was in debit; therefore, the Court held the workman could claim nothing from the Indemnity Company.

It is to be noted that this disposed of the case so far as the claim transferred to the workman under section 5 subsection (1) of the principal Act, but that would not deprive him of the priority provided by subsection (3) in the bankruptcy, etc., as amended by section 19 of the amending Act in a case falling within the amending Act, but the circumstances here—a receiver appointed by resolution of debenture holders—only came within the terms of the latter Act, and, although in this case it was not decided whether that Act applied to cases where the receiver was appointed before the amending Act came into force, this has now been decided in the negative in the two cases we referred to at the early part of this article, *Clemmons Aluminium Co. (ubi sup)* and *Snowdown Colliery Co., Ltd. (ubi sup)*.

Water Supply, "Private Dwelling House."

In the recent case, *Northern Theatres Company v. Schillito* (1925, 2 K.B. 101), the Court of Appeal had to consider some complex questions arising under a private Act which governed the water supply of the Halifax Corporation. The appellants were the owners of two theatres within the borough, which had been duly assessed and rated to the consolidated rate of the borough, and water was supplied for domestic purposes, the charges being calculated upon the gross estimated rentals.

The question really turned upon section 62 of the Halifax Improvement Act, 1853, which provided, "The Corporation shall at the request of the owner or occupier of any private dwelling house or part of a private dwelling house, any street within the borough in which the water main of the Corporation from time to time is laid, or on the application of any person who, under the provisions of this Act, is entitled to demand a supply of water within the borough for domestic purposes, furnish to such owner or occupier, or other person, a sufficient supply of water for domestic purposes at rates not exceeding the rates in this Act specified." The rates were specified by section 62 as modified by local Acts and Provisional Orders, but nothing turned upon the actual charges.

The appellants contended that the Corporation was not entitled to charge these theatres where there was not even a resident caretaker on the same basis as for water supplied for domestic purposes to a private dwelling house, for at these theatres the consumption of water was far less, while the rating and assessment was higher. The main difficulty in the case was to give any meaning to the two branches of section 59, divided thus (a) "at the request of the owner or occupier of any private dwelling house . . . within the borough; or (b) on the application of any person who, under the provisions of the Act, is entitled to demand a supply of water within the borough for domestic purposes." No section in the Act itself appears to refer to this second category of persons, and the only suggestion that could be made was that as the Waterworks Clauses Act, 1847, was incorporated in the private Act, this latter provision referred to cases falling within sections 44 and 53 of the Waterworks Clauses Act.

Section 44 requires the undertakers to lay down communication pipes and supply water to "dwelling houses" of less than £10 rate value in certain conditions; whilst section 53, which again uses the expression "dwelling house," enables owners who have themselves laid down the communication pipes to require a supply of water. If these sections were incorporated in the private Act, it will be seen imported the words "dwelling house" into the Act as distinguished from the words "private dwelling house," the expression used in section 59.

The majority of the Court held that the *Bristol Guardians v. Bristol Waterworks Company* (1912, 1 Ch. 846; *The Builder*, April 26, 1912) was a strong authority against using the words in a more general language of an incorporation of general clauses Act for the purposes of enlarging the narrower and more definite scope of subject matter of a particular incorporation private Act, but that even if this Halifax Act were so interpreted a theatre did not fall within the ordinary meaning of the words "dwelling house."

A good deal of confusion has arisen in deciding what is meant by a "private dwelling house" or a "dwelling house" under the Water Act, partly because of the different wording of various Acts and partly from obiter dicta delivered in these cases.

In *Cooke v. New River Company* (1908, 38 Division 56) there were such expressions of judicial opinion that anything—for instance a factory—might be a dwelling house in which

was required for domestic purposes, but that there being considered was not the case that under consideration here, and the were frankly *obiter*.

Patents, Ltd., v. Metropolitan Water (1912, A.C. 24; *The Builder*, November 1) was also considered by the Court of in the case under consideration, but was dismissed because the Act in that case the expression "house," not "dwelling

as contended that if the general Act was to the private Act it would render the part of section 59 superfluous, but Lord Scrutton, who adopted that view, pointed at the first part applied to "private dwelling houses," whilst, if the second part persons brought in by the Waterworks Act, 1847, it applied to owners of "dwelling houses" which may be dwelling though not "private dwelling houses." In the cases, *Liskeard Union v. Liskeard Works Co.* (1881, 7 Q.B.D. 505), a case of house, and *South West Suburban Water v. St. Marylebone Union* (1904, 2 K.B. 104; *The Builder*, June 18, 1904), a case of house, were instanced.

As we have said, the different wording of the private and other Acts makes it impossible to say with certainty how one decision upon another, but in this case it is certainly going to have it laid down by the Court of that a theatre where no one resides on premises is not a "dwelling house."

As a result of the decision was that the action could not charge the theatres at rates claimed, but the theatres could not supply of water as of right but only by consent under section 63 of the private

Divisional Court, on the authority of *Bridge Water Company v. Wilts County Council* (1909, 1 K.B. 824), had held that there was implied agreement to pay for the water used on the basis claimed; but the Court of Appeal, apart from the fact that this view had been argued before the justices and the facts found by them would not enable this to be done, distinguished that case from the present case on the ground that there the question was who was liable to pay the local education authority or the school teachers, and no question arose as to the basis on which the payment was to be made.

Options to Purchase.

We note that the case *Batchelor v. Murphy* (1925, 1 Ch. 220), which we noted in detail in issue of June 26, 1925, has been carried to the House of Lords, where the judgment delivered by the majority of the Court of Appeal has been affirmed. It will be sufficient to inform our readers that this was not the original case of an option to purchase contained in a lease which cannot be exercised if the lease be extended (see *Sherwood v. The Mayor of London*, 1924, 2 Ch. 440; *The Builder*, July 25, 1924), but it was an agreement releasing the tenant from a lease, and accepting other terms in their place on a new lease for the term of the unexpired residue of the original lease on the same conditions in all respects "as if the original lease save for a difference in the term." The Majority of the Court of Appeal had held that this case was distinguishable from *Leeds v. Blith*, where a lease had been extended for a longer term, in which case it has been held that the provisions regulating the relationship of landlord and tenant continue to apply, and not an option to purchase which is a collateral agreement (see *Sherwood v. The Mayor of London*, *supra*), for here there was an express contract to grant a new lease on the same terms in all respects as the original lease would include the option. The House of Lords, without calling upon counsel for the defendants affirmed this decision, but pointed out that it was not a case turning upon any principle of law, but upon the particular terms used in the document executed by the parties in reference to the transaction, and to execute a new lease for the un-

expired term of the old lease "on the same terms and conditions in all respects" as the old lease. The House of Lords agreed that an option to purchase is a collateral right forming no part of the demise, but under this particular document that collateral right was included. The decision, therefore, in no way affects the principles of law on this subject, but turns exclusively on the terms of the particular agreement comprised in the document drawn up in this case.

LAW REPORTS

A Painter's Compensation.—Father and Son Trading at the Same Address.

In the Shoreditch County Court, before Judge Cluer, an applicant, Alfred Mahoney, of 38, Rippoth-road, Bow, E., a painter, asked for an award under the Workmen's Compensation Act against James Connolly, of 47, Bandon-road, Victoria Park, E., a builder and contractor. According to the claim the applicant was doing some painting work in Bethnal Green-road, and when getting off a board on to the ground the safety barrier gave way, and he fell into the basement and sustained a sprained ankle and a contusion of the leg.

Mr. Samuel Duncan said, on behalf of the applicant, no compensation had been paid at all. The father, the respondent, said that the applicant was not in his employ but in that of his son, who was carrying on a painting and decorator's business, the businesses being at the same address. Mr. Duncan asked leave to amend the son's name, but Judge Cluer refused.

Judge Cluer said he would award no costs in the present action, but the applicant would be entitled to go on against the son at some future time. Costs of the day would not be allowed, as the father had allowed an action to proceed against him, when he knew it was his son's affair. He quite agreed that, as head of the household, he was justified in coming to Court, but he could have easily handed it over to his son. The action would proceed at some future date, when the necessary notices had been served on the party, and in this case he would find for the respondent with no costs.

An Architect's Fees.

At Bristol Assize, Mrs. Elsie Nora Leete, the widow of Sidney T. Leete, an architect, of Weston-super-Mare, brought an action against Mr. E. M. Trevor, a draper of the same town, for the recovery of £160 10s. for fees alleged to be due in regard to plans for a bungalow.

Mr. E. H. C. Wethered, who appeared for the plaintiff, said that Mr. Leete died on March 19, 1924, and his widow brought that action as administratrix of the estate. In 1922 Mr. Trevor approached Mr. Leete and asked him to act as architect, and he agreed to do so. In September of the same year Mr. Leete surveyed the site and submitted plans to Mr. Trevor. A quantity surveyor was appointed, Mr. Frank Wilkins, of Bristol, tendered for £7,500, and Mr. Leete was paid £50 on account, which sum had been deducted from the claim. Mr. Leete became ill in 1923, and died. In January, 1924, plaintiff saw Mr. Trevor in regard to the plans, and he then said that he had decided to abandon the idea.

A counter claim was set up for £325 for loss of profit owing to work for conversion of flats not having been completed within a given time. Plaintiff knew nothing about any plans for the conversion of flats for defendant.

Mr. Du Parc, for the defendant, contended that what had happened was that Mr. Leete, after a conversation with Mr. Trevor on the subject of a reasonably priced house, embarked on a grandiose scheme in the hope of getting Mr. Trevor to accept it, in which case he would get larger fees.

Defendant, giving evidence, said he gave instructions for a house to cost between £2,000 and £2,500. Later he asked Mr. Leete how much the house as planned would cost, and was

told between £3,200 and £3,500. Witness said he could not go on with it.

Mrs. Maud Mary Trevor, wife of defendant, having given evidence, judgment was given for plaintiff for £110 10s., with costs, the counter-claim being dismissed.

Architect's Action for Fees.

IN this case, tried in the King's Bench Division, before Mr. Justice Branson, the plaintiffs, Messrs. Thos. Denham Atkinson and Chas. Wm. Long, architects, of Trumpington-street, Cambridge, brought the action against the Wellbrook Sanitary Laundry Co., Ltd., to recover professional fees they claimed to be due for services rendered.

Mr. Le Quesne, K.C., for the plaintiffs, said they carried on business in London and Cambridge, and the dispute arose on a claim made by the plaintiffs for work done for the defendants by Mr. Long. Mr. Long was employed by the defendants, who were negotiating to make some alterations in their laundry premises, which were not large enough to cope with a growing business. The defendants declined to pay or admit any liability to Mr. Long, and their case, according to the pleadings, was that they stipulated with Mr. Long that he must draw his plans in such a way that the building construction must cost a maximum of £5,000. After the work was done tenders were asked for, and the result was that the lowest received was from a firm in Cambridge for £7,300. Now the defendants said that Mr. Long was not to receive any fees at all. The plaintiffs said that no such terms were passed on to them at all, and that they never undertook to prepare plans for the limit of £5,000, and that the plans were so varied and so added to in the course of discussions that the defendants were aware that the work could not be carried through at a maximum of £5,000. Mr. Long was consulted by the defendants in March, 1923, but before that they had also consulted one or two other people, and particularly a Mr. Barry Neame, the manager of a large London laundry, who made a report and a rough sketch of what he suggested should be done to enlarge the defendants' laundry. Mr. Long's instructions were, in fact, to consider this report and sketch and base his plans on them, and from those two Mr. Long started to prepare his plans and took a great deal of trouble with them, as well as advising the directors of the company on the details of his proposed scheme. Despite this he advised defendants that the variations and additions would come to something over £6,000, but after further consultations this sum was reduced to about £5,250. When the tender came in after submission to builders of the quantity surveyor's estimates, the lowest tender received was £7,300. The defendants then abandoned their scheme and repudiated the contract with the plaintiffs in respect of the work done.

Mr. Long, F.R.I.B.A., gave evidence in support of counsel's statement. He said his claim was based on the scale of the Institute charges.

Mr. G. Nicholson, a quantity surveyor, of Chancery-lane, London, also gave evidence as to the figures prepared by him.

This being the plaintiffs' case, the secretary and also the directors of the defendant company gave evidence to the effect that the instructions were that the alterations were not to exceed £5,000.

Mr. Justice Branson gave judgment for the plaintiffs for £398 13s., with costs, stating that he was satisfied that the defendants knew about the extra cost on the variations and modifications made. He also dismissed with costs a counterclaim by the defendants for the fees paid to the quantity surveyor.

New King's Lynn Bridge.

The new ferro-concrete bridge at King's Lynn has been completed, at a cost of £30,000. It spans the River Ouse at a point where a length of 500 ft. is necessary in order to cross the harbour of the port of King's Lynn.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—ED.

Roads.

[REPLY TO "CONTRACTOR," NOVEMBER 20.]

SIR,—If the road referred to is a highway and repairable by "the inhabitants at large," as appears from the particulars given by "Contractor," then, in general, the liability to repair rests with the local authority, and that liability cannot be avoided by any agreement or arrangement entered into with "Contractor." Although the local authority, acting as surveyor of highways, was not liable for compensation had damage accrued to a person due to the subsidence, yet, in filling in the hollow and rolling it with a steam roller, the local authority was merely carrying out its statutory duty and, as above stated, this could not be avoided by the agreement with "Contractor." Whether the local authority can recover the cost depends on the nature of the agreement. If the agreement was that "Contractor" was to carry out the work himself, as and where required, then it does appear that he should have been given the opportunity of doing the work; and, failing that, that the local authority could not recover, since the agreement was broken. But on the information given, it is more than probable that the local authority did not contract out of what it was bound by statute to perform, and can recover from "Contractor," on the agreement, usually made in such cases, for what appears to be a small charge for the work done. C. L.

SIR,—It seems obvious that the Council has broken the contract by making good the road-work which they had asked the querist to do. Before paying the bill of 12s. 6d. demanded, querist should get it in writing that he will not be responsible for any further maintenance and that the contract for one year be annulled. He will then know where he stands. If they (the Council) objects, other steps can be taken. G. W. H.

SIR,—Under most authorities, roads and sewers that are public property are most zealously guarded, and all work thereto is carried out by the staff of the authority. I have recently connected a private sewer to a housing scheme to the public sewer, and the procedure was, in every way, similar to that I have met elsewhere, viz., we carried out all work up to the street boundary, and the public authority carried on under the street and connected to the public sewer, charging us with the cost thereof. In the case quoted by your correspondent, it appears that the authority allowed a precedent of a private person carrying out the work upon the public street, and it might be presumed that the maintenance thereof might be carried out by the same means to the approval of the authority. In this case, the action of the council seems to have been a little high-handed, but I should imagine that in the opinion of the surveyor the trench had settled sufficiently to allow of finally surfacing the road over same, and that the use of the steam roller was the necessary final touch. If this assumption is correct, "Contractor" has had the job done in probably the cheapest and best way possible, and I suggest he should swallow his sense of technical injury and cheerfully pay up his twelve-and-sixpence. BREADTH.

Aggregate.

SIR,—Can you inform me what is meant by 6 to 1 concrete; should it be a mix of, say, 1:2:4 or 1:3:6? A specification states:—"The concrete shall be composed of one part cement and six parts aggregate unless otherwise specified, determined by actual struck measures to be provided by the contractor. The aggregate shall consist of well-washed, clean, broken stone, brick, or material of an approved quality and strength, free from all injurious materials,

and capable of passing through a 2 in. ring for concrete or 6 in. thick, and 1½ in. ring for concrete over 4 in. thick. Any aggregate used must be capable of bearing a crushing test of 500 tons per square foot. The aggregate shall include a sufficient quantity of small and fine chippings and sand, to reduce the voids caused by the coarser materials to a minimum, gauged by water-expulsion test."

Is there anything in the foregoing specification to support the contractor's contention that the coarse aggregate only should be taken into consideration in the calculation of the required amount of cement, observing that six parts aggregate will be taken as the basis? G. E. S.

[A "6 to 1 concrete" is a concrete made up of 6 parts of aggregate to 1 part of cement, and is a method of specifying proportions which should never be used. There are many published tables of proportions necessary to produce given strengths, and it is always safer to specify the exact proportions of coarse and fine materials. "Aggregate" is a much-abused word, and although it literally means the whole of the contents of a concrete with the exception of the cement, it is frequently used to refer to the coarse material only. The proper way to specify concrete is to state the exact proportions of coarse and fine material of which the aggregate is to be composed; thus, a 4:2:1 mix means four parts of coarse material, two parts of fine material, and one part of cement. To leave it to the contractor to use what proportion of the finer material he thinks fit is inviting trouble unless the integrity of the builder is beyond reproach. From some figures given in our correspondent's letter it appears that in this instance the contractor has used 4.88 parts of coarse material and 2.44 parts of fine material to 1.22 parts of cement, and this should give a sufficiently strong mixture for most purposes provided the aggregate were properly graded. We are also told that the contractor "contents that the proportion of cement required for the foregoing mix is calculated in relation to the coarse material only," but we fail to see how this contention can hold good, as (a) if cement were calculated to fill all the voids in the coarse material a very much greater proportion would be required, (b) if fine material is included there must obviously be sufficient cement to coat all the particles. Our correspondent's letter is not quite clear on some points, but it does emphasise the necessity for the careful drafting of specifications; a clear statement of the quantities of fine and coarse material would have avoided the whole trouble.—ED.]

Making Partition Soundproof.

SIR,—Can any reader advise how to render soundproof the partition and floor herewith described? Kitchen 9 ft. square, 8 ft. ceiling (lath and plaster); bedroom over, of same dimensions. Bedroom floor 7-8 in. boards on 4½ in. by 2 in. joists. W.c. 5 ft. 6 in. by 2 ft. 6 in. recently formed in corner of bedroom by partition and door extending to ceiling. Partition 3 in. by 2 in. wood framing with ½ in. T. and G. each side. P. trap screwed directly to floor boards. All sounds from the w.c. are not only heard very distinctly in what remains of the bedroom, but also in the kitchen below. AJAX.

Destroying Beetles.

SIR,—Can any of your readers suggest a method of destroying beetles? A new building which has been erected against old portions of servants' quarters is troubled on occasions by these insects. Borax employed on the skirtings temporarily improves matters, but does not eliminate the nuisance. W. B.

Pickling Paint off Woodwork.

[REPLY TO "OLD DEAL," NOVEMBER 20.]

Most of the high-class paint manufacturers who advertise in *The Builder* would supply querist with a paint solvent that would not do the slightest harm to the most delicate mould-

ings. I have used these preparations in big class work with good results for twenty years. Do not use a burning-off lamp on any account. G. W. H.

Condensation.

[REPLY TO H. W. FINN, NOVEMBER 20.]

If cooking is done on gas-stoves, which may cause steam, why not have zinc hoods over them? Then take a vent-pipe from same into the outside air, similar to those used on geysers. Alternatively, why not build an electric extract fan in the wall with vent shafts over the cooking apparatus? G. W. H.

SIR,—Either strip the walls and coat with lime plaster, which is sufficiently porous to cope with the condensation, or, if there is a domestic hot-water apparatus and conditions are favourable, re-arrange the runs to allow of a pipe running around the walls of the rooms concerned. Condensation troubles are not confined to winter, which makes it advisable to use a system employed all the year round, and central heating, which is closed down during half the year. WARMTH.

Hospital Windows.

The names of firms who supply a special glass that allows the ultra-violet rays to penetrate have been sent direct to the correspondent who asked for this information in our last issue.

TOWN PLANNING AND ITS ADVANTAGES TO BUILDERS

IN the course of an address on "Town Planning," at the Rotherham Rotary Club recently, Mr. F. Marsden, city engineer and surveyor of Bradford, said that town planning was one of the subjects which would have to be dealt with by municipalities throughout the country before long, if they had not already started. He was quite convinced that if Rotherham people got to know what town planning meant they would hail it with delight. It was like all new subjects—rather a bogey to good many people who did not really understand it.

When the first Town-Planning Act was introduced, said Mr. Marsden, there were people who opposed it, fearing that all land was going to be confiscated; but, as a matter of fact, there had been no confiscation. It simply enabled the municipality to use a lot of the land in a much better way than before. It provided that certain areas should be set apart for houses, with ten or not more than twelve to the acre, other parts for the acre, others six and others eight to the acre, according to the best interests of the town. The fact that the Act provided that some estates could have four houses to the acre was, he contended, one of the best safeguards that a town had. If a man put up a house and spent money on making it nice, he would have no fear of his neighbour putting a bone factory next door or across the street. In Bradford they were having very little trouble either with landowners, property owners, builders, in regard to town-planning regulations. He knew no case in Bradford where a builder had said the regulations hampered him in building or selling his houses. It was uncommon thing during the industrial era for houses to be built at the rate of 70 to the acre. Now, the maximum that could be built on an average was twelve, or at most fifteen. It was proved conclusively that an artisan living under town-planning conditions reduced his sickness rate to half, and reduced his death rate to less than half.

If a builder took three or four acres of land he could develop it on town-planning lines at less cost than by the old method. Speculative builders and others were dedicating, free of cost, tens of thousands of square yards for the widening of important streets in Bradford, because of the advantages they were finding under town planning.

THE BUILDING TRADE

HINTS TO BUILDERS

By J. H. BARNES, F.I.O.B.

EXCAVATOR.

There are many methods of dealing with the excavation required for the foundation of an any building, and no definite rule can be ed to suit all jobs. In the case of a some- small building contract the amount of ation required would probably be but a quantity, and the cheapest way of dealing this would be to back the cart right up to excavated material, so that the spoil could be d directly into the cart without a further . This course may necessitate the laying of a temporary sleeper road from the highway, as, although there may be hing of a roadway in existence on the site, raffic of tip-carts would seriously damage ad and cause ruts and make it difficult for port.

It is not possible to get a cart in a position nient for loading in the manner described . It may be necessary to leave the cart or in the nearest position on the adjoining ay and convey the material from the site e cart either by barrow or basket, which- s the more convenient for the job in ques- . Where barrows are used it should be in mind that it is very much easier work e navy if the runs can be fixed somewhat e down grade.

sketing may be necessary where the ial has to be excavated below the ground- . By this method the earth is placed into basket and carried to the cart and the ial deposited therein. Although this may somewhat expensive method of dealing the work, it is probable that it may be er than to deal with the material by g, i.e., by throwing the excavated material e series of platforms until it reaches the d level, there to be conveyed by wheel- w or basket. Under such circumstances asketing may be less expensive, as it would numerous handlings of the material.

In the case of a job of a somewhat larger area, a tirely different method may be required. ere is a considerable amount of existing rty around the site and such buildings o be underpinned, it may be advan- us to carry out such underpinning opera- first, leaving the "dumping" to be ated afterwards. Sometimes it may be able to sink a trench all round the site so the foundations for the retaining or outer can be put in, and when this work is com- the "dumping" or general excavation e attacked. A third method would be rt the "dumping" or general excavation nd leave an embankment around the sur- ing buildings as an abutment; the under- ng could then be done by driving headings the bottom depth so that the old buildings e picked up on the new levels. This l probably be the cheapest way of handling roblem.

haps the cheapest way of dealing with the port of the excavated material would be to the cart or other means of transport right e the excavated face and fill the material ly into the cart. If the site is to be sunk over depth than the public highway it will ecessary to lay in a temporary timber road ave chain horses to assist with the tip carts e help for the other means of transport, se of the gradual steepening of the gradient a would be necessary if the site was being ated to a considerable depth.

Other usual method is for a timber staging e built and a locomotive steam crane led to run on rails so that the excavated rial can be let fall or thrown into skips and ips run on a bogey on steel rails to within adius of the crane and hoisted and tipped e means of transport. This is a fairly e and very efficient method of dealing with

excavation, and it should be borne in mind that the cost will largely depend upon the number of loads which can be hoisted by the crane per day. Such a crane usually lifts a skip containing about $\frac{1}{2}$ yard loose earth, and two such skipfuls would be needed for the ordinary cart. On a fairly easy job it would be possible to hoist about 160 to 200 lifts per day, or more if the means of transport are available. It is often a great convenience on a job of this kind to have one or two $\frac{1}{2}$ -yard skips, which can be let down the narrow trenches and so save unnecessary handling of material.

One of the difficulties in dealing with exca- vation in towns is that several carts are neded to keep the job going and the crane employed, and should any little delay occur on the road the carts may all arrive at the job at the same time and would be rather more than the crane could cope with for a short period, and after- wards the engine would have little or nothing to do. The general experience is that the crane is overwhelmed with work in the morning and has little or nothing to do in the afternoon. It is therefore "up to" the builder to see that such periods are utilised for the taking in of bricks and other materials, and arrangements must be made so that other materials being delivered to the job do not hinder the transport of the excavated material.

In using the kind of crane indicated above, care should be taken not to lower the jib to a greater angle than 45 degs., as, if the jib is allowed to go down to a lower level than this, the leverage of the laden skip may overturn the crane. The crane makers issue a chart showing the weights the machine will lift when the jib is at different angles. The steam locomotive crane of the type indicated above would need cleaning out periodically, and Saturday afternoon is usually considered a convenient time for such work, at the standard rate of pay for such duties. While such a crane is in use it should be insured against mechanical breakdown, boiler explosion, toppling over, and third party risks.

On jobs where the excavated material has to be spread and levelled over the site where directed, this may necessitate either wheeling or carting the material and depositing as near as possible to the required position, and from this to be spread and levelled as required. If the general building materials are stacked on such deposited spoil, the made-up ground will hardly need ramming or consolidating after- wards. It will be found that a fairly wide wheel to the wheelbarrow, say $1\frac{1}{2}$ in., will give better results than the use of a barrow with a narrow wheel.

Where the earth or material arising from the excavation has to be carted away, the builder should be particularly careful to see that the carts take their full load. This is a somewhat obvious point to make, but it is essential that the supervision of this department should never be relaxed. Where the spoil arising from exca- vation has to be carted away, it is usual for the firm employed to do the cartage to find also the dump or shoot, and t.e will usually include the cost of this in the price of carting away.

In the centre of London and large towns it is very difficult to find a place where it is possible to dump rubbish on the ground, and such positions are only found at some distance from the centre of the city, which would mean that the number of journeys a carman would do in the day would be very few because of the distance to be travelled. In most cases it will be cheaper to cart the rubbish and dispose of it by tipping into a barge alongside the Thames or one of the canals, in which case the lightermen usually arrange for an inclusive charge for the barging of rubbish and depositing the spoil where they may find it needed, usually some low-lying ground.

Wherever barges are concerned they will be subject to time and tide. It may happen in such cases when the barge does not arrive, through stress of weather or other cause, in time to receive the rubbish, the "shoot" may be temporarily closed, and consequently the job would be considerably delayed because the cartage contractors, having no dump for their rubbish, would seek work elsewhere. If the carts do not arrive to clear the rubbish, though only for one day, other work must be found for the men on the job, even if it is unremunerative. These little difficulties are bound to occur, and it is usually advisable wherever possible to keep a little work in hand for such emergencies, so that the men may be usefully employed—breaking up old foundations, &c.

If the site is covered with turf and vegetable soil the former may be sold, and the vegetable soil may find a cheaper market than the ordinary demolition stuff. At any rate, it is worth trying to secure a reduction in the cartage bill by this means. Some contracts may endeavour to indicate the nature of the soil which may be expected to be met with during excavation, and where rock is known to exist it should be definitely stated.

It is not unusual for trial holes to be dug on the site so that everyone concerned may have some idea of the sort of ground which may be met with, and if a trial hole shows that there is any considerable quantity of sand at the position which the hole is dug the builder may be tempted to allow something as a credit for this material from his tender, but he should bear in mind that it is not usual for anyone to guarantee that the trial hole exactly discloses the kind of ground to be met with over the whole site. It is not unusual for a trial hole to be dug and disclose sand nearly the whole way down, and when the job comes to be executed the builder may find that by some lucky or unlucky chance the trial was sunk on the only spot on the site containing sand. Even if sand is found on the site, it is not quite an unmixed blessing, as there is rarely any room for storage on the job, and the foreman is handicapped by the presence of a large amount of material he is unable to use for the time being.

Care should be taken to see that the dimen- sions for the excavation are very carefully taken as, if too much earth is excavated, a corre- spondingly larger quantity of material will be required to fill the void caused by the formation of the trench.

FOUNDATIONS.

It is necessary for a good foundation to be provided to all buildings of a permanent character. The ordinary building contract in London does not place upon the builder the responsibility for making a decision with regard to the suitability of sub-soils for foundations, the duty usually being cast upon the architect to obtain the approval of the District Surveyor; but it is well for the young builder to have some idea of the suitability of various soils to carry foundations, and of the rough-and-ready methods usually employed to test them.

When the bottom of the trench or foundation is reached, the sub-soil may be tested by driving a crowbar into the ground and working it round with a circular motion; if the sub-soil "shatters" or disintegrates, it will show a loose soil and probably "made-up" ground. A similar experiment may be tried in the case of wet clay. By driving in a crowbar and working it round, one can see to what extent the moisture has soaked into the clay. If the building is erected and a great load is super- imposed at some point on wet or soft clay, the pressure may cause the sub-soil either to squeeze out or consolidate, and perhaps some local cause may result in the drying out of the moisture in the clay and tend to cause settle- ments in the building. Soft sand can be tested by a similar experiment. Where really hard

ballast exists it will be found difficult to drive a crowbar into it, and such a sub-soil will probably give a most suitable foundation.

If the excavation is carried right down to the London clay this will be found to be very hard and stiff, so much so that it is very difficult to get a pickaxe into it. The top surface can be shaved off in thin slices with a shovel. Such a sub-soil would probably give the best weight-carrying foundation to be found in the London district.

In the nature of things, it is impossible to state definitely what weight the different soils will carry. The following are the weights which are generally considered the maximum which should be placed on the different soils:—

	Per sq. foot.
Made up ground	1 ton.
Soft clay.....	2 tons.
Loam or firm and dry clay ...	3 „
Very firm gravel or hard clay ..	4 „

It should be remembered that in many districts in London, large areas have been excavated and sand dug out, as at Hackney and Hammer-smith, and large areas have been excavated for brick clay at Highbury and Hoxton, and the excavations have been filled in sometimes to a depth of nearly 30 ft. with loose rubbish. In dealing with a building on a site of this kind, the only satisfactory plan is to excavate through the "made up" ground on to the virgin soil. Within the area of what is defined as the City, a large district was at one time covered by the Moorfields Marsh, and it will be necessary to sink right through this mud to obtain a firm foundation on the ballast and clay below.

It is somewhat difficult to indicate the class of building which may come within the category of the weights indicated above, and which could be safely supported on the various foundations; but the class of building usually found in the average dwelling house may weigh from one to one-and-a-half tons per foot super on the foundations. Buildings of the warehouse class may exert a pressure of two to three tons per foot super., but it is obvious that the type of building and the number of stories it contains will determine the weight on the footings. In every instance, the actual weight going on the foundations should be properly calculated. In excavating for trenches it is often found that there are some pot holes or poor soil which should be taken out to render the concrete foundations complete.

Where the building is to be erected either on the river bank or on what used to be the bed of an old river, such as is found near the Thames, it is sometimes advisable to arrange for a trial boring to be made to determine exactly the particulars of the strata underlying some important part of the proposed building. This can be done by the usual method of boring for an artesian well, and the record can be kept of the core as it is drawn to the surface. By this means some fair indication is obtained as to how far it is necessary to go to get a reasonably good foundation. In some instances it will be considered too expensive to go to the full depth required, and then the architect and engineer must devise some method of distributing the loads to secure a satisfactory result, probably by a concrete raft or grillage.

Where the drain or sewer is below the level of the foundation, the soil will show up fairly dry, but if the foundation is sunk to a level below the sewer, dampness is usually met with, particularly in the water-holding soils.

It is customary and usual to provide horizontal and vertical damp courses to the buildings in cases of this kind, although should any slight settlement occur it would very likely break the waterproofing and allow moisture to percolate through into the buildings. The foundations should be carried to such a depth as to be unaffected by weather. All foundations should be laid horizontally and any variation required in the depths at various points should be arranged by steps and not by slopes.

When a site has been excavated ready to receive foundations, the concrete should be filled in as quickly as ever possible, as it is not advisable to let rain soak into the subsoil, otherwise

that which was hard, dry clay may very soon become soft and wet and less efficient for weight carrying. In some instances, where the excavations for foundations have been completed and instructions have not been received for laying in concrete, the builder has been instructed to cover over the base for foundation with tarpaulins and divert watercourses to keep the wet out of the ground, but this is not a usual practice.

All excavation for foundations should be continued until a general or common subsoil is reached. For instance, when the excavation has been taken down to a specified depth, the ground exposed may differ at various points in the same trench, and made-up ground, loose sand and clay may successively be met with. In such cases, it is advisable to continue excavation all over the trench until one general kind of soil is reached.

THE WEEK IN PARLIAMENT

Houses under Erection.

Mr. N. Chamberlain informed Mr. T. Thomson that on the 1st inst. the numbers of houses in course of erection in schemes under the Housing Acts of 1923 and 1924 were 40,526 by local authorities, and 33,031 by private enterprise. The total number of houses in schemes sanctioned under these Acts, completed or in course of erection, were 140,781 by local authorities, and 187,833 by private enterprise.

The Unemployed.

Sir Arthur Steel-Maitland, Minister of Labour, informed Mr. T. Williams that on October 26 the number of insured workpeople in the building trade of Great Britain recorded as unemployed was 69,392, classified as follows:—

Carpenters, 2,864; bricklayers, 911; masons, 781; slaters, 193; plasterers, 22; painters, 18,230; plumbers, 1,521; labourers, 24,377; and other workers in the building trade, 20,313.

"Steel" Houses.

Mr. N. Chamberlain informed Mr. A. Greenwood that the following table gave the number of houses (including those to be erected for demonstration purposes), of the different types referred to which had been approved and the number of local authorities to which approval had been given in England and Wales:—

Type.	Houses.	Authorities.
Dennis-Wild ..	1,356	21
Telford	266	33
Weir.....	23	12
Atholl	50	25

The Quality of Bricks.

Brigadier-General Brooke asked the Minister if he could state the cost of manufacturing chalk bricks and ordinary bricks; whether the former could be manufactured at any chalk quarry by unskilled labour; whether any experiments had been carried out in this country in connection with the use of the former material for building houses; and the result?

Mr. N. Chamberlain said that the kinds of bricks and the cost of manufacture varied too much for any general comparison to be made.

British Materials.

Mr. Harmsworth asked the Minister of Health whether, in all cases in which bricks or steel were to be used for the erection of houses under the Housing Acts, he would require as a condition of the granting of subsidies for such houses that only British bricks and British steel should be used, having regard to the amount of unemployment existing in these two industries?

Sir K. Wood, who replied, said that Section 10 of the Housing Act, 1924, provided that, in approving proposals for the construction of houses, the Minister of Health should not impose any conditions which would prevent the materials required being purchased in the cheapest market at home or abroad. The Government had, however, urged local authorities to arrange that all contracts for or incidental to works carried out by them should, in the absence of special circumstances, be placed in this country.

Shortage of Plasterers.

Mr. Penny asked the Minister of Health whether he would consider, in view of the shortage of bricklayers and plasterers, the desirability of devising, in conjunction with the trade union concerned, some scheme in localities where the housing problem was most acute, whereby men in receipt of unemployment benefit for a period in excess of, say, two or three months, would be required to take a course of instruction to qualify them as bricklayers and plasterers, at the same time stipulate that all houses receiving a State subsidy must employ a certain percentage of these trainees?

Mr. N. Chamberlain said he would submit the suggestion to the Building Industry Committee.

Slum Clearances.

Mr. Albery asked the Minister whether an inquiry had been held into the suggested erection of 10-story flats in connection with slum clearance schemes?

Mr. N. Chamberlain said he had set up no sub-committee as the hon. member had in mind. Two or three local authorities, however, were contemplating the erection as an experiment of blocks of 10-story flats in connection with slum clearance schemes, and he was giving careful consideration to this question in all its aspects.

The Position in Rural Areas.

Mr. Foot Mitchell asked what steps were being taken to meet the housing shortage in agricultural districts?

Mr. N. Chamberlain said he regretted that figures were not available showing the number of new houses which had been erected in agricultural districts and are occupied by farm labourers. Increased financial assistance was authorised by the Housing Act of 1924 for houses erected in agricultural parishes, and far 135 Rural District Councils had submitted schemes for the erection of 3,072 houses in such parishes. Of these 555 had been completed, 9 were under construction, and 508 had not been definitely arranged for but not started.

Smoke Abatement.

Mr. N. Chamberlain informed Sir W. de Freyne that he hoped to introduce a Smoke Abatement Bill next Session.

Schemes Refused.

Mr. Forrest asked the Minister the number of instances in which he had refused to sanction housing schemes submitted by local authorities.

Mr. N. Chamberlain said he had in a number of instances been unable to approve schemes submitted by local authorities where the price appeared to be unreasonably high, and in other instances he had advised local authorities to limit their immediate building programme to such number of houses as could be built with available labour and materials at an early date.

The Epstein Panel.

Mr. Locker Lampson, replying to a number of questions, said the design for the Epstein panel submitted to the Office of Works by the Hudson Memorial Committee, which, it was assumed, represented the views of the subscribers to the memorial. The First Commissioner was satisfied that there was a general desire for removal of the panel.

Use of Bricks.

Mr. Kelly asked the Prime Minister whether he had received a resolution from the National Building and Engineering Brick Federation protesting against the embargo by the Ministry of Health on the use of bricks, in view of the heavy capital expenditure made by brickmakers at the direct request of the Government during the last few years, with the object of maintaining increasing output?

Sir K. Wood said that the communication had been received from the Federation to permit of the maximum amount of building work being undertaken. The Minister was encouraging local authorities, where there was a shortage of bricklayers and substitution of other methods of construction was possible, to adopt alternative methods of construction for public buildings.

PUBLIC WORKS, ROADS AND TRANSPORT CONGRESS

ns exhibition, which closed on Thursday, fully noticed in our last issue. We now extracts from two of the more important papers read this week. We shall publish next papers on "Road Corrugation," "Strengthening of Bridges," "Regional Planning and Road Development," and "Modern Methods of Housing."

The Uses of Electricity.

Speaking on this subject, Mr. R. Hardie, C.E., divided his remarks under two headings: The uses of electricity for (a) lighting and (b) institutional purposes.

He said that a supply of electricity was or would in the immediate future be available, at every hamlet, at least to every community of any size, at prices which brought electricity within the reach of even the poorest. Therefore there was no justification for other than electric lighting being introduced in any new dwelling house, no matter how small.

In our Colonies; on the Continent, all over America, electric lighting was fast becoming universal, not only in every class of house, office, workshop and factory, but in the lighting of all urban highways.

He mentioned a few typical electric housing schemes in various parts of the country which within the past few years demonstrated the practicability of this design of house. We have the actual bulk experience of those who have occupied these houses. Glasgow had 800 electric houses nearing completion. Over 200 had been in occupation for over a year, and the tenants spoke very highly of them. In addition to having electric light throughout, they were provided with the following equipment:—An electric cooker for eight persons, a sink, a large-size oven, a grill and boiler, with the addition of a three-pint boiling electric kettle; an electric wash; and a plug for electric iron. In several instances they had installed, at the consumers' expense, immersers in the storage cylinder, to get hot water on occasions when the coal was out of use. Heating plugs were provided in all rooms except the bathroom and kitchen, although in many cases the tenant had to have plugs fitted in these additional rooms at his own expense, and electric fires were provided. There was no hire charge for the use of this equipment, and the Electricity Department undertook the maintenance of all electrical heating and cooking apparatus in the house without charge to the Housing Department or tenant. The Electricity Department took advantage of the electricity tariff, and the actual returns showed the average weekly bill for electricity in a three-apartment house 3s.; in a four-apartment house 3s. 6d.; in a five-apartment house 4s. 6d. These figures would seem to show that electric service had nothing to be compared to the score of cost of the older methods of lighting, heating and cooking, and there was in addition to be put to the credit side the undoubted advantages of cleanliness, more healthy living conditions, saving of labour and space of flue. The general impression was that a coal fire was the best under any circumstances. Careful observation showed that where a fire was required for a period up to three hours, the electric was as cheap.

The abolition of the chimneyhead would be a great gain; as it could not be regarded as a better than an eyesore. Each room was heated by means of a grating near the ceiling leading into a ventilating shaft.

The Director of Housing estimated that the cost effected in building construction due to the elimination of fireplaces and chimneyheads was in a three-apartment house £10s., and in a four-apartment house £34, to cover the cost of the whole elec-

trical equipment. At Leicester, Gateshead-on-Tyne, Woolwich, and other places, large numbers of similar houses were in being, and without exception they were being operated with satisfaction to the tenants. To-day the provision of electricity supply to any new housing estate was the only necessary item of expenditure for lighting, heating and cooking. No alternative service was called for.

Mr. Hardie then gave the costs of various systems of wiring, of which we will quote but one: For a five-apartment house with eight lights, 1.5 amp. socket, ten switches, 4.15 amp. sockets, 7/20 circuit to cooker and wash boiler, the cost was £11 6s. These prices were for the wiring installed in screwed steel tubing, concealed behind plaster and plain lighting pendants—lamps were not included. In every public building within the jurisdiction of the Glasgow Corporation electric lighting was the rule: these include municipal buildings, art galleries, city hospitals, public halls, libraries, workhouses and lodging houses. The main heating of these buildings was done by central heating systems, but they have, however, some hundreds of electric fires scattered throughout private rooms, offices, etc., in these buildings, where additional local heat was required, and they have numerous special heating installations. Electric heaters of a new type, indestructible, fireproof, and with other virtues, would be fixed on walls, and thermostatic control adopted.

Ultra-violet treatment installations were in use in hospitals, clinics and infirmaries.

At Poplar electricity had superseded in turn coal and gas for heating weekly 4,000 gallons of water at the public baths, heating these competitors at every point. In time all streets would be lit by electric lamps; the expenditure could probably be recovered in a short time in reduced policing costs. And when this was done, if pillars were required, let us adopt lamp standards having some pretensions to design. We stood in need of an awakening of civic pride which would ensure that our thoroughfares were made more attractive. Nowadays the engineer of an electricity undertaking had many points of contact with his brother officials. He was to-day in a position to advise on a growing variety of problems which hitherto the public might have considered out of his range. The electrical industry had long since divested itself of swaddling clothes, and sought opportunity to make good its claims, satisfied that performance would justify these.

Use of Tar for Roadways.

This paper was read by Mr. T. Glover, C.B.E., M.Inst.C.E., and Mr. A. E. Collins, M.Inst.C.E., on behalf of the Institution of Gas Engineers, whose members are responsible for producing a large proportion of the raw material from which the prepared tar for road dressing and road crust construction is derived. Tarred road surfaces were a success, and the practice of dressing roads with suitably prepared tar (followed by the application of stone chippings in sufficient quantity to form a compact wearing layer), had resulted in the abolition of dust on the highways, and it had, until recently, been available to the road engineer for keeping the majority of road surfaces in a usable condition.

In seeking to allay dust by the use of tar, the penetrating quality of the oils in the tar had a distinct attraction for the road engineer, who was then dealing almost entirely with water-bound roads. The adhesive resinous part of the tar, however, was found to have considerable protective qualities in preventing the attrition of the aggregate forming the road crust, and a demand soon arose for a quality of tar having a higher percentage of the adhesive resins and a lower percentage of the

volatile parts of the tar, which was found to be of great value as a binding agent for surface dressing and in the tarring of aggregates for tarmacadam work. Broken iron slag or stone roads laid as tarmacadam were probably the most economical surfaces for modern traffic. Successful construction in these materials demanded the selection of suitable tar and dry aggregate and heating the tar to the desired temperature. The aggregate should not be graded but must consist of all sizes, from the largest to the smallest intended to be used, in correct proportions, to give the densest mixture. Upon a good foundation a coating of tarmacadam 4 in. thick rolled down to 3 in. was sufficient, and the writers had never found it advantageous to lay thicker coatings. Except where it was feared mud would work up into the wearing coat during construction, the writers had found no advantage in two-coat work, but on the other hand the 3 in. finished thickness in one coat was more easily laid and has been known to give better results than two-coat work. Suitable stone should be tough, so as to resist the shocks from the traffic, it should have a good resistance to the wear caused by the grinding action of the wheels, and should break with a rough, angular fracture. The selection of tar which complied with the Roads Department Specification for tar No. 2 should be based on securing the maximum amount of adhesive and setting properties, in line with the nature of the aggregate to be used, and the conditions under which the tarmacadam was manufactured. Climatic conditions, too, must be taken into consideration, and it should not be difficult to adopt a summer and winter specification for the tar used in the manufacture of tarmacadam and its application for the respective seasons. Such specifications would also take into consideration, to achieve the best results, the heat values of the stone and tar in the manufacturing operation, and the important factor as to whether the material was for laying immediately or not for some considerable time after its manufacture. The application of the tarred aggregate to the road should be made on an approved, well-drained foundation, with all ruts and depressions made up and levelled off by rolling. Each course of material should be laid to the desired thickness and separately rolled before the next course was laid. The consolidation of the material was best done by a roller at least 10 tons in weight. Careful rolling was very important in order to obtain a good shape to the road, and was generally carried out by commencing at one edge of the road and progressing to the centre, the roller travelling parallel with the centre line of the road. It was found advisable in most cases to apply a sealing coat of tar to the surface of the road, with a light dressing of stone chippings, sufficiently rolled to bed the dressing in the seal coat. Approved practice in the construction of tarmacadam roads was responsible for a non-skid surface, combined with lasting and durable wearing properties to withstand the heaviest traffic.

For grouting or penetration macadam, any of the kinds of stone that were used for the ordinary macadam were suitable, and this stone in predetermined sizes was laid on a substantial and unyielding foundation to a desired thickness and dry-rolled. The selection of a highly viscous tar with maximum adhesive and setting properties was essential, and its application made to the rolled stone at a temperature between 250° and 300° F., either by hand or pressure. The road was then immediately covered with a dusting of 3-in. screenings, and well rolled with at least a 15-ton roller. Good results were obtained from year to year in many towns with tar supplied direct from the gasworks, which had simply been dehydrated in a simple form of plant. For large-scale operations road engineers would draw their supplies from distilleries dealing with large quantities in well-devised plant. Such distillers had scientific staffs who kept the process or preparation under supervision to ensure careful standardisation.

THE DECORATOR'S EXHIBITION AT MANCHESTER

We published in our last issue a notice of this exhibition, which opened in Manchester last week and closes to-morrow (Saturday). The opening ceremony was performed by Lord Stanley of Alderley, who referred to the scheme for creating a young artistic race of artisans. The art of decoration was again coming into its own. There were peaks of artistic feeling right throughout history, and he thought the present rise began with this century and had been going on ever since. The work of the young apprentices which was exhibited was most commendable. These young men had been fully trained through an extensive course and had brought their work to the final test, i.e., the general public. In declaring the exhibition open, he expressed the wish that it might carry on the traditions formed during twenty-five years by the National Federation of Master Painters and Decorators of England and Wales.

The Lord Mayor of Manchester (Councillor Miles E. Mitchell), who presided, said he was especially glad to come to that ceremony on account of his desire to encourage the system of training of apprentices. He was especially interested in the housing question and wished to see more trained craftsmen in order that more unskilled labour might be utilised. There was, he said, a lack of appreciation of the highest forms of craftsmanship, and he was very hopeful of being able to raise the ideals of the younger generation through the medium of the craft-training apprenticeship committee in the town. This exhibition would do much to encourage this.

A vote of thanks to Lord Stanley was proposed by the Mayor of Oldham and seconded by Mr. Jas. E. Butterworth (President of the National Federation of Master Painters and Decorators of England and Wales).

A vote of thanks to the Lord Mayor was proposed by Mr. David Green, of Hull, and seconded by Mr. Cameron, the President of the Manchester section of the Association of Painters and Decorators.

Training of Boys for the Painting and Decorating Trades.

The training scheme referred to by Lord Stanley and others has been arranged in consultation and with the co-operation of the Manchester Joint Education Committee of Masters and Operatives in the Painting and Decorative Industry. It provides an opportunity for placing boys in business with security of employment and at a remunerative wage until they reach maturity. The course takes three years and begins approximately at fourteen years of age. The parents undertake that the pupils will complete the course and enter the trade. The subjects include general education, drawing and design, craftsmanship in mixing and using of distemper and oil paint, use of varnishes and enamels, trimming and hanging of papers, use of plant and scaffolding, sign-writing, graining and marbling, stencilling and lining, and the theory and use of colour. Suitable candidates are found situations provided they enter into an apprenticeship until they are twenty-one and attend evening classes in the meantime.

National Society for the Preservation of Property.

A special open meeting, arranged to coincide with the Decorators' Exhibition, was held by this Society in the Milton Hall, Manchester, on November 18th.

The Right Hon. C. A. M'Curdy, P.C., K.C., said that the object of this Society was to increase the use of paint. We had the largest market at our very doors, and we could find new and profitable customers here. He emphasised the fact that in the U.S.A. the amount of goods bought was three times as great as here, and wages were from 200 to 300 per cent. higher. He would not say that we were actually declining, but for a period of twenty-five years we had ceased to improve our buying power. Such societies as this would

help to teach people to spend money on an economical proposition. Not only would the manufacturer and the consumer benefit from an increased use of paint and varnish: the way was being shown to other trades to follow suit in this scheme of co-operative effort.

Colonel Willey, President of the Federation of British Industries, said that the Society, by encouraging the increased use of paint and varnish, were benefiting the nation at large. The various trades would require to organise within themselves, and on a national basis. Each trade must be strong in itself, as short time was a most uneconomical proposition. There must be collective thinking followed by collective action. The U.S.A. had created a super-salesmanship in order to create a desire amongst the public to buy products useful to themselves and to the nation. He wished the Society to stress the purchase of British-made paint, and in regard to standardisation he referred to the fact that in America this began with the paint and varnish trade.

In the absence of Mr. F. W. Goodenough, Mr. W. A. Mason, the General Manager of the British Commercial Gas Association, gave an outline of the successful results they had obtained from collective advertising. He pointed out a number of difficulties which had been overcome and gave a useful and practical address to those about to launch this scheme on behalf of the paint and varnish trade.

Mr. Geoffrey le M. Mander, of the firm of Mander Bros., said that it was necessary for all sections of the trade to combine. They were not advocating the use of any one brand or the patronage of any one manufacturer, merchant or decorator. The Society was formed to assist the whole trade and to increase the use of paint and varnish amongst the public. They were there to endeavour to impress the public that their products would preserve their property and be well worth the small cost involved. Each member was asked for the sum of 2s. per year per painter employee. The Society had only been in existence three months, but already a fair membership had been attained. He wished to emphasise the fact that there was to be no attempt to encourage the public to do their own decoration; they regarded it as a skilled trade. One of the objects set was the doubling of the turnover of the trade by 1928, and to this end various efforts were proposed, amongst which might be mentioned: (1) an endeavour to influence municipal bodies; local government boards and town councils to pay greater attention to the protection of property; (2) an effort to develop individual publicity and local co-operative efforts; (3) an endeavour to spread the painting business more equally over the whole twelve months of the year and to eliminate the depression in the winter season.

CHALK WALLING

VARIOUS schemes of chalk walling for houses have been considered during the past two years by the Government's Building Research Board that investigates methods of construction under the Department of Scientific and Industrial Research. A system devised by Mr. T. G. Davidson, F.R.I.B.A., embodies shuttering which enables the chalk to be rammed tightly together and so form a permanent and waterproof wall. The mixture is chalk concrete. No scaffolding is required. The shuttering normally set up to an 18 in. wall is filled in with chalk and cement, and the mixture is pure chalk of a 1:1 ratio. Experience shows that if the chalk is well mixed and rammed no plastering inside the building is required, thus making it unnecessary to call upon this depleted arm of the building trade. The chalk conglomerate walls are 1 ft. 10½ in. on the ground floor and slope off inwards to 18 in. wide from the first floor upwards. The exterior wall is generally coated with a good washable distemper. A building erected not far from London shows no deterioration after five years' exposure. During the first three months it was possible to nail and screw direct to the wall, but afterwards the chalk became harder.

NEW BUILDINGS IN LONDON.

Barking.—Mr. C. J. Dawson, F.R.Clock House Chambers, Barking, is to plan for new buildings at the generating to cost about £5,000.

Battersea.—Mr. Edgar S. Under F.R.I.B.A., 3, Queen-street, Cheapside has prepared plans for the building of flats and stores in Elcho-street, S.W.11.

Bride-lane.—The premises at Nos. 22, 24, Bride-lane, E.C.4, have been pulled to make way for a large restaurant and building. Plans and building work are the supervision of the Construction Department Messrs. J. Lyons & Co., Ltd., Cadby Hall.

Charing Cross-road.—Extensive alterations and improvements are being made to the pavement upon which it is proposed to expend £50,000. Messrs. Phillips' Lamps will part of building. Messrs. F. Taperell & architects, 3, Gower-street, W.C.1.

Copenhagen-street.—The "Golden public house in Copenhagen-street, N.1, to be rebuilt by the owners, Messrs. Whitt Co., Ltd., brewers, Chiswell-street, E.C.1.

Croydon.—A site at the junction of L road and Beatrice-avenue has been purchased for the building of public baths by the Council.

(For rates of wages in the Building Trade in Scotland, see page 792.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, &c.

"Double Gilding."

The Master Sign Makers' Association has addressed a letter to the Royal Institute of British Architects, the Architectural Association, and the Royal Institute of the Architects of Ireland, in which attention is called to the term "double gilded," which, it is stated, is frequently used in specifications for the gilding of outside work and wood letter signs. Double gilding in oil, it is pointed out, is neither advisable nor practical, the fact of coating with oil size to take a second gilding rendering the first gilding useless. The correct specification is "Gilded with best English manufactured gold-leaf of double the regular substance assaying not less than 23 carat in standard," or "Gilded with pure English manufactured gold-leaf (free from alloy) of double the regular substance," according to circumstances.

PROPOSED NEW BUILDINGS & OTHER WORK

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building or taking the responsibility of commencing before plans are finally approved by the authorities, "proposed" works at the publication have been actually commenced. Abbreviations: T.C. for Town Council; for Urban District Council; R.D.C. for District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; M.A.B. for Metropolitan Association; and M.W.B. for Metropolitan Board.

NEWFIELD.—A site has been acquired by the Durham E.C. for the erection of an elementary school.

NEWMARKET.—The R.D.C. has received sanction from the M.H. to erect 200 houses within the next two years.

NEW MILTON.—The Hampshire C.C. has purchased a site at Old Milton-road, for the erection of a police station.

NEWPORT (MON).—Plans for the rebuilding of the St. Michael's Mixed School have been received from the Managers of the R.C., and have been forwarded to the B.E. for approval. The T.C. is to make application to the M.H. for sanction to borrow the sum of £4,500 for providing public sanitary conveniences in Cardiff-road. The Borough Electrical Engineer is to make alterations at the boiler house, at a cost of £375. Plans passed: Cardiff-road, 12 houses, for T. J. Hill.

NEW SEAHAM.—Preliminary plans for an elementary school are being prepared by the Durham E.C.

NORTHAMPTON.—New works are to be built in Kingsthorpe-road by A. Bell & Co., Ltd., tile manufacturers. The builders are A. Glenn & Sons, Northampton, the architects being W. & E. Hunt, F.R.I.B.A., 30, Norfolk-street, Strand, W.C.

NORTH WICH.—The R.D.C. has acquired a site for the erection of a tuberculosis pavilion.

OXTE.—Surrey E.C. has instructed the County Architect to prepare plans for a secondary school to be erected at Blue House-lane.

PARK PREWITT.—The Hampshire C.C. has voted £1,300 for extensions at the laundry at the Mental Hospital.

PLYMOUTH.—The Housing Committee has approved the erection by the G.W. Ry. Co. of 86 houses at Beechfield.

POLESWORTH.—The Warwickshire E.C. are considering the advisability of erecting a central school.

PORCUPES.—The Hampshire E.C. has obtained sanction to borrow £5,700 for the enlargement of the elementary school.

PRESTON.—A scheme is on foot for the erection of a proposed new municipal hall.

REIGATE.—Approval has been given by the B.E. to sketch plans for extensions at the Reigate Grammar School.

RIPLEY.—Guildford R.D.C. are to reconstruct the Abbey Stream bridge, on the Ripley-Sheerwater road, at a cost of £2,700.

ROTHERWELL.—West Riding E.C. are to obtain a site on the Ring-road for an elementary school.

SACRISTEN.—Amended plans have been prepared by the Durham E.C. for the enlargement of the elementary school.

ST. THOMAS.—The M.H. has approved the proposal of the R.D.C. to proceed with the erection of 88 houses.

SALFORD.—The Corporation proposes to build swimming baths, slipper baths, and a public washhouse on a site in Hodge-lane. The M.H. has held an inquiry into an application for sanction to borrow £49,824 for the purpose.

SEAHAM.—On behalf of the Durham C.C. Mr. W. Milburn, architect, of Sunderland, has prepared plans and estimates for adapting Seaham Hall and Earl's House Buildings for the purposes of sanatoria, &c., and the plans are to be submitted to the M.H. for approval.

SEGEFIELD.—The R.D.C. has received sanction from the M.H. to borrow £7,200 for the erection of houses.

SOLI HULL.—The Warwickshire E.C. are to prepare a scheme for a secondary school for 200 scholars, at a cost of about £30,000.

SOUTH END-ON-SEA.—It is proposed to build a pier and music pavilion, restaurant, &c., at Westcliff by the Chalkwell Hall Estate Co., for which plans have been prepared by P. Howard, 51, High-street.

SOUTH KILN.—Allotment holders are being asked to surrender land behind the town hall in connection with the proposed extension of the town hall. In connection with the proposed new school of art, the Borough Engineer has now been instructed to prepare plans for a brick building. A further hundred houses are to be subsidised. The Corporation has passed

plans by F. W. Newby architect, for Henderson Bros., for the lay-out for 104 houses at Harton Moor; and by H. Hill architect, for J. T. Armstrong, for thirty-six houses off Harton-lane.—J. H. Morton & Son are to erect, for the Rev. Cecil Booth, a mission church in King George-road.

STANLEY.—The U.D.C. has received intimation that the Public Works Board has agreed to make an advance of £62,500 for the erection of 120 additional houses at South Stanley.

STANDROPE.—Plans for an elementary school have been prepared by the Durham E.C.

STOCKTON.—The Stockton and Thornaby Hospital Committee has decided to erect a venereal diseases clinic in the hospital grounds, at a cost of £3,150.

STRATFORD-ON-AVON.—A secondary school for 150 is to be erected by the Warwickshire E.C., at a cost of about £22,500.

SUNDERLAND.—The C.B. is to apply to the M.H. for sanction to borrow £62,008 for the erection of 136 houses.

SUTTON.—The Southern Railway Co. has approved of the plans of the Surrey C.C. for the proposed bridge over the railway.

SUTTON COLDFIELD.—Compulsory powers are being sought by the Warwick E.C. for the purchase of the Beeches estate required for the proposed High School.

SWALWELL.—The Durham E.C. are negotiating for a site for an elementary school.

TJORNLEY.—The Durham E.C. has prepared plans for remodelling the Colliery school.

TYNEMOUTH.—The Borough Engineer has been instructed to prepare a lay-out plan of the Hospital Field at Balkwell.—A scheme for further privy conversions, at a cost of £23,275, has been prepared.—The M.H. are to be pressed to give approval of the plans for the Infectious Diseases Hospital at Moorpark.—A site at the Nook is to be obtained for the erection of a convenience.—The Borough Engineer is to prepare designs for railings to enclose the War Memorial.—The Housing Committee are negotiating for 11 acres at Cullercoats for a housing scheme.—The Housing Architect is to submit schemes for houses on the southern section of the Balkwell estate.

USWORTH.—A site for the erection of an elementary school has been acquired by the Durham E.C.

UXBRI GE.—The U.D.C. propose to arrange with Mr. W. L. Carr, of Northwood, to prepare a general development plan for the whole of the district, and a statutory town plan for the undeveloped portion of the district. A further 25 houses are to be subsidised.

WALLINGTON.—Surrey C.C. has asked the County Engineer to prepare estimates for the widening of the railway bridge at Manor-road, Wallington.—Surrey E.C. has decided to fence the site for a secondary school at a cost of £750.

WALLOP.—A site is being purchased by the Hampshire E.C. for the erection of an elementary school.

WALTON (YORKS).—The L.M.S.R. Co. are about to commence the widening of their bridge over Low Town.

WANTSWORTH.—The L.C.C. recommend the borrowing by the B.C. of £94,800 for housing.

WEAL STONE.—The M.H. is to hold an inquiry into the Council's application for a loan of £900 for the erection of a public convenience and ambulance station in Peel-road.

WE NESPITE.—The Staffordshire C.C. has decided to contribute to the Wednesfield U.D.C. £1,000 for the reconstruction of Wards Bridge and Castle Bridge over the Birmingham Canal.

WEST AUCKLAND.—Preliminary plans for an elementary school are being prepared by the Durham E.C.

WHITEMOOR.—The L.N.E.R. are to carry out considerable improvements at their locomotive depot at Whitemoor. The whole scheme will cost £43,000.

WIMBORNE.—The B.E. has approved the plans of the Surrey E.C. for the erection of a county school for girls, the estimated cost being £22,000.

WIND ESTER.—Building repairs are to be undertaken by the Hampshire C.C. at the Castle Hill Offices, at a cost of £400.

WOKING.—The U.D.C. are considering the question of the erection of a new fire station.

WOLVERHAMPTON.—A M.H. inquiry has been held into the application by the Corporation for an order for the compulsory acquisition of land at the Low Hill housing estate.

FIRE.

KEW.—Damage amounting to £15,000 was caused by a fire which destroyed the buildings of the New Brentford fruit and vegetable market.

Roads.

Sir Henry Maybury, chairman of the Organising Committee, speaking at a recent luncheon held in connection with the Public Works, Roads and Transport Congress and Exhibition, now being held at the Agricultural Hall, said that some idea of the magnitude of local government might be gleaned from the facts that £40,000,000 is spent annually on roads, £14,600,000 on housing and town-planning, and £32,000,000 on public health, the total annual expenditure for all services being over £350,000,000. He drew attention also to the rapidly increasing number of delegates: there are now 1,315 representing 720 authorities. Questioned as to the danger of road surfaces, Sir Henry said that besides modern traffic conditions contributing to make roads slippery we had in the past tried to get too fine a surface; in future it would be more mosaic-like in character. The white line for the guidance of traffic was being experimented with with a view to making it comparatively per-

manent by incorporating a white composition in the road material. The testing of the methods suggested was under the supervision of the county engineer of Middlesex, Mr. A. Dryland, M.Inst.C.E., whose report would be circulated to local authorities in order to make all markings uniform.

Obituary.

The death has occurred of Mr. James Hudson, retired builder and contractor, of 18, Featherstone-street, Roker, Sunderland.

Cattle Sale Ring.

A new cattle sale ring at Blackmoor Gate, North Devon, has been built from the designs of Messrs. Friend & Kelly, L.R.I.B.A., architects and surveyors, of Barnstaple. Accommodation is provided in iron pens for 2,500 sheep and 160 cattle, and the 70 ft. auction ring and entire area is paved with stone and grouted with cement.

CALIFORNIAN BUNGALOW

This bungalow has been erected in the town of Riverside, California, U.S.A. The front faces the south, and the bedrooms are on the west side, so as to get the ocean winds from the west in the afternoon and evening. The large living room on the second floor has seventeen windows, making this a cool room for sleeping. The garage has large openings for the ventilation of rooms on the first floor, which are kept cooler than is possible in flat-roofed houses. The screened porch is protected in the day from the sun by heavy roller awnings. The adobe cooler is made of sun dried bricks. The walls are 8 in. thick and are plastered on both sides; the floor is of concrete. The house is heated in the winter time by a hot-air furnace in the cellar, where also is the hot-water heater. Hardwood floors are provided throughout and the walls are Tiffany painted in coats of oil paint. Mr. Andrew Morrison, Riverside, California, was the architect.

A Bungalow in Riverside, California. MR. ANDREW MORRISON, Architect.

Aberdeen.—BUILDING.—A scheme for the erection of 129 dwelling houses—86 additional houses in connection with the Corporation's scheme of housebuilding at Torry, to cost £41,294, and 43 for private builders, at a cost of £30,700—is to be carried out. The Plans Committee has passed plans for 153 new buildings and alterations, to cost altogether £96,655.

THE SCOTTISH BUILDER

SCOTTISH HOUSING: SPECIAL FORMS OF CON- STRUCTION

In their circular of October 3, on this subject, the Scottish Board of Health stated that they would announce for the information of local authorities the names and addresses of firms whose make of house had been approved for the purposes of the additional subsidy. The Board have now had under consideration the various applications received, and particulars of the firms approved have been issued. There are: Corolite Construction, Ltd., 12-13, Henrietta-street, London, W.C. 2 (poured concrete house); Cowiesons, Ltd., 3, Charles-street, St. Rollox, Glasgow (timber and steel house); Jas. Jones & Sons, Ltd., Larbert Sawmills, Larbert (timber house); and G. & J. Weir, Ltd., Housing Factory, Cardonald, Glasgow (timber and steel house).

The approved firms have in each case stated that they will be in a position to comply with the condition laid down in the circular of October 3 that not more than 10 per cent. of the labour employed in the production and erection of the houses will be skilled building trades labour, and with the further condition requiring them to complete all houses ordered from them at the rate of 1,000 houses per year from a date to be fixed by the Board, regard being had to the dates at which the sites may be made available. The implementing of these conditions is precedent to the granting of the additional subsidy of £40 per house, and accordingly it is essential that they should be embodied in the contract to be entered into between the local authority and the producer of the particular make or makes of houses selected by them. For the information of the local authority, there is appended to a circular just issued excerpt from the letters of approval by the Board to the various manufacturers embodying the conditions of approval. The local authority should in all contracts they may make take the contractors bound to implement these conditions. The Board have made it clear to the approved firms that, if these conditions are

not implemented, the local authority will not be entitled to the additional subsidy of £40, and the local authority will, no doubt, take the firms bound to reduce their contract price £40 per house in the event of either of the conditions not being observed. The form of contract should be so drawn as to make provision for this.

As stated in the circular of October 3, the special offer of £40 per house is to apply only in respect of 4,000 houses, and unless orders obtained for not less than 1,000 houses of an approved make, and the full 4,000 houses requisitioned now by local authorities, the Government reserve the right to reconsider the situation. Further, in view of the pressing need for expediting the provision of additional housing in Scotland, the Government wish to emphasize the desirability of taking the fullest advantage of the facilities possessed by each of the approved firms, and accordingly the distribution of the local authorities' orders among those firms will be the subject of special consideration by the Government when the local authority requirements are made known. The local authority should now proceed to consider whether they propose to take advantage, and if so, to what extent, of the special subsidy. From the list of firms given, they may make their selection of the make or makes of houses they propose to adopt and the numbers of each they propose to proceed with. The last date for the local authorities submitting the form of application referred to has been extended to December 14.

NEW BUILDINGS IN SCOTLAND

Dunbar.—EXTENSION.—The Town Council has approved of a scheme for the extension of the gas works, subject to the Ministry of Labour giving an unemployment grant. The scheme involves an outlay of about £10,000.

Glasgow.—HALL.—The sub-committee of Kelvin Hall has decided, in view of the great expense (about £40,000), to be incurred in heating and lighting a building with a 200 ft. span, together with the cost of maintenance to continue consideration of the matter, and in the meantime, they have asked the Engineer to prepare another lay-out plan for a new hall with a central span of less than 200 ft.

Stirling.—INFIRMARY.—The cost of the infirmary is estimated from £70,000 to £80,000. A suitable site of 15 acres has been purchased at Braehead for the sum of £5,200. Plans are being prepared to give accommodation for 100 beds. They show two wards of two stories for surgical cases, one ward of two stories for medical cases, a children's ward, and a maternity home.

Dunbar.—HOUSES.—The Board of Health has approved of plans for 20 houses at the Boroedale.

Housing Progress in Scotland.

The following figures show the progress that has been made in State-aided housing schemes in Scotland to October 31, 1925:—

	Under Construction	Completed
1919 Act	25,135	40,000
Private Subsidy Houses	2,324	3,250
Slum Clearance Schemes	1,895	5,670
1923 Act	4,999	5,670
1924 Act (Local Authority Scheme)	286	3,450
Total	34,639	12,790

Of the total number of houses completed under construction under the 1923 Act, 3,100 are by the Local Authorities and 7,483 by private enterprise.

BUILDING TRADE WAGES IN SCOTLAND.*

The following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

	Masons.	Brick-layers.	Car-penters, Joiners.	Plas-terers.	Slat-ers.	Plum-b-ers.	Painters.	Labourers—Masons', Bricklayers', Plasterers'.
Aberdeen	1/8	1/8½	1/8	1/8	1/8	1/8	1/7	10½d. to 1/1

TRADE NEWS

We understand that Messrs. William Shepherd & Sons, Ltd., of Milkstone, Rochdale, have just completed the making up of Royal-parade and Channel View-road with their asphaltic slag for the Eastbourne Corporation.

With reference to the paragraph in our issue of November 13, as to Atholl steel houses, the roofing of all these houses in London and the provinces is being carried out by Messrs. E. Parkinson (London), Ltd., of Tottenham.

Tangyes, Ltd., Cornwall Works, Birmingham, state that they have available for loan (free of charge) to engineering lecturers and technical instructors, a large selection of lantern slides of their manufactures, comprising gas engines and suction gas producers, oil engines, steam and power pumps, hydraulic machinery, machine tools, &c.; also an assortment of slides of historical interest dealing with these subjects. A number of papers dealing with their different classes of machinery are also available for loan, to assist lecturers in preparing their own papers. A list will be sent free on application.

A Floor Covering.

The qualities of Triolin floor-covering material, state the makers, embrace those of hard wear and good appearance; it is dust-proof, spark-proof, damp-proof, and—not being porous—impervious to water and damp. It is unaffected by acids and has, we understand, been tested under the most trying conditions in lavatories. Its composition is the same throughout, and owing to this it is non-fading; it can be obtained in rich art shades and mottled and granite effects. The material is laid in lengths, the method of fitting being such that the joints become almost homogeneous and the appearance that of a jointless floor. Although the application of Triolin to the uses of the theatre is of comparatively recent origin, it is laid at the New Gallery Cinema, Regent-street; the Picture House, Granby-street, Leicester; the Picture House, Sauchiehall-street, Glasgow; the Picture House, Ward's-end, Halifax; and the Palladium, High-road, Wood Green, N. 22.

Newcastle Builders' Association.

At the recent annual meeting of the Newcastle Building Trades' Employers' Association, Mr. G. Clements was elected President; Mr. G. V. Scott, Vice-President; Mr. J. R. Rutherford, Hon. Treasurer; and Mr. A. Smith, Secretary.

Builders' Estates.

Mr. A. Corah, builder and contractor, of Loughborough, has left net estate of £18,116.

Mr. J. A. Gill-Knight, Surveyor of the Hackney Borough Council, 8, Narbonne-avenue, Clapham, has left net estate of £3,071.

New Silk Factory at Liverpool.

The British Enka Company has agreed with the vendors of the Aintree Aircraft Factory to purchase that site for their new silk factory. A large number of workers will be required, for it is anticipated that ultimately about 3,000 will be employed in the new-factory.

Liverpool Improvement Scheme.

The chairman of Liverpool's Markets Committee, Mr. W. Kelly, suggests the building of a large central public hall over St. John's Market, also the removal of the wholesale fish market from Great Charlotte-street, in order to pave the way for an extension of the central shopping area of the city.

A New Rustless Steel.

Dr. W. H. Hadfield, head of the Brown Firth Research Laboratory, Sheffield, has stated that a rustless steel possessing exceptional properties has been placed on the market. It has entirely different characteristics from former chromium steel, and can be worked either hot or cold. It completely resists the action of sea water and also the action of nitric acid and the acid in foodstuffs.

TENDERS

Communications for insertion under this heading should be addressed to "The Editor," and must reach him not later than Tuesday evening.

* Denotes accepted. † Denotes provisionally accepted.

‡ Denotes recommended for acceptance.

§ Denotes accepted subject to modification.

BALLYTIVNAN.—Plumbing and sanitation work at farm house, for the Sligo Mental Hospital:—

O'Hara & Co.	£116 3 6
